**PROSTATE CANCER AWARENESS MONTH**

**WHEREAS**, prostate cancer is the most frequently diagnosed cancer in men aside from skin cancer, and it is estimated that 1 in 7 men develop this disease in their lifetime; and,

**WHEREAS**, the American Cancer Society estimates there will be 233,000 new cases of prostate cancer in the United States in 2014, resulting in an estimated 29,480 deaths; and,

**WHEREAS**, in California, prostate cancer is the most common cancer among men in almost all race and ethnic groups and African-American men are over 45% more likely to develop this disease than non-Hispanic white men and over 58% more likely than Hispanic men; and,

**WHEREAS**, it is estimated 20,430 men in California will be diagnosed with prostate cancer this year and it is estimated 3,380 men in California will die from this disease; and,

**WHEREAS**, the survival rate approaches 100% when prostate cancer is diagnosed and treated early, but drops to 28% when it spreads to the other parts of the body; and,

**WHEREAS**, early prostate cancer usually has no symptoms and studies suggest strong familial predisposition may be responsible for 5% to 10% of the disease cases; and,

**WHEREAS**, recent studies suggest that a diet high in processed meat or dairy foods may be a risk factor, and obesity appears to increase risk of aggressive prostate cancer; and,

**WHEREAS**, the American Cancer Society recommends that all men should be given sufficient information about the benefits and limitations of testing and early detection to allow them to make a decision based on their personal values and preferences; and,

**WHEREAS**, the Board of Supervisors of the County of El Dorado joins communities across our nation to increase the awareness about the importance for men to make an informed decision with their health care provider about early detection and testing for prostate cancer.
