Chief Technology Officer

RE: Proposed Reorganization of the Department of Information Technology

Background

On July 19, 2011 the Board of Supervisors approved Resolution 127-2011 assigning responsibility for the role of County Chief Technology Officer to Vern Pierson. The resolution states that the assignment would terminate effective with the revocation of the assignment, delegation and transfer of duties, whether or not it occurs during the term of the District Attorney. At the time the matter was discussed, it was anticipated that the assignment would last 12-18 months.

Over the last 3 years, the Information Technology department and other stakeholders, including members of the Executive Steering Committee, have undertaken the monumental task of procuring and implementing a new ERP system (FENIX). The implementation of FENIX is currently being accomplished without significant staffing increases. The department has conducted three recruitments, which have been designated as failed recruitments. Applicants have cited the inadequate level of pay as the reason for not accepting the position. Without the increase of staffing resources, the department has struggled to conduct the ongoing day to day operations of providing support to County departments while engaging in FENIX conversion activities.

On July 21, 2014 the Department of Human Resources initiated a recruitment for the Director of Information Technology. The recruitment period was from July 21, 2014 through August 11, 2014.

Subsequently on September 15, 2014 the County conducted Final Budget Hearings which revealed a General Fund deficit of a projected \$19 million in FY 15/16.

Given the aforementioned, the following factors should be contemplated while considering the path forward:

1. Further evaluation of the current projected General Fund budget deficit is necessary to ensure that the organization structure which is implemented has long term sustainability.

"The commitment of the Information Technologies staff is to deliver creative, practical solutions and services in support of the current and future technological needs of El Dorado County."

2. The critical mission of successfully implementing the FENIX project is underway. It is imperative that the technological resources which are necessary to accomplish the implementation of FENIX and day to day operations of the department are provided.
3. Continuity of the Chief Technology Officer structure is beneficial to ensure consistency of the executive leadership team responsible for the successful implementation of FENIX.

Recommendation

The Chief Technology Officer is recommending that the County of El Dorado implement a balanced approach to achieving the goal of implementing the FENIX system and improving overall operations, while taking into consideration the fiscal uncertainty of the County General Fund budget through a departmental reorganization. The reorganization plan has been fully vetted with the Department of Human Resources and the department is in concurrence with the recommendations. This balanced approach can be accomplished by:

1. Delaying the appointment of the Director of Information Technology until further analysis of the budget deficit is conducted, and
2. Implementing a reorganization of the Information Technology department to provide much needed resources to accomplish the FENIX implementation, continue with other system modernizations moving the County forward off the mainframe, and improve service delivery to departments.

Reorganization

The proposed organization would add a management layer to the existing IT organization to provide enhanced support to accomplish complex information technology project management and service delivery (See Attachment 1-Proposed Information Technology Organization Chart). As a result, the County would benefit from this structure by achieving a broadened and advanced skill-level of professionals, focusing on critical technological issues across the organization. These duties and projects would including the duties of; security officer, project management, LMIS system modernization, property tax system modernization, website overhaul, and innovative initiatives.

To accomplish this with the least impact to the budget, the Chief Technology Officer recommends:

1. Delete a vacant Supervising IT Analyst
2. Delete a vacant Senior IT Department Coordinator
3. Delete a vacant Senior IT Analyst-Operating Systems
4. Add 3 Deputy Director of Information Technology positions
5. Increase the salary range for the classification of Assistant Director of Information Technology from Step 5 \$55.81 per hour to Step 5 \$58.31 per hour

"The commitment of the Information Technologies staff is to deliver creative, practical solutions and services in support of the current and future technological needs of El Dorado County."

6. The Director of Information Technology would remain unfilled until the General Fund budget deficit is further analyzed

With the development of new technology, the development and growth of our technical staff will need focused attention. Managing the day to day operations, staff development, ensuring staff are receiving optimal leadership and development, and frequent assessments are conducted with our business partners throughout the County are imperative to the County's success. These tasks are monumental and will require the successful candidates to work schedules outside of the standard forty-hour work week.

The reorganization will assist the department to meet the County's three percent salary savings directive. Additionally, the reorganization will increase the department's ability to recruit and retain Information Technology high skilled professionals.

If the Director of Information Technology was filled, the fiscal impact to the Information Technology budget with the changes noted above is an annual increase of approximately \$2,487*. By holding the Director of Information Technology vacant, the department will see annual savings of approximately \$194,000.

*Financial analysis prepared by the Chief Budget Officer.

Sincerely,

Vern Pierson
Chief Technology Officer

"The commitment of the Information Technologies staff is to deliver creative, practical solutions and services in support of the current and future technological needs of El Dorado County."
