I believe that this facility should go forward with all of the needed parts of the facility that is required to make this a full running county. The continued costs for going outside and contracting services that if we had the facility and staff would increase and ultimately save the tax payers money. Continued contracts support the other agencies and still cost the county money for the services.

I have also heard that a Board member keeps harping on the "contaminated" site issue. The site has been cleared by USEPA and Cal EPA for reuse. These agencies do not take their jobs lightly and will continue to be over site if the county needs their assistance. If something un for seen arises then the county has the help of the state to work thru them.

Thank You
