Dear Commissioners/Char-

It is unclear if I will be able to attend the 4/27 hearing on this item- please include my comments in the record for the Biological Resources Policy Update, item #9, file 12-1203

thanks so much-

Ellen Van Dyke

E. Van Dyke - public comment to PC 4/27/17- Bio Resources Policy Update FEIR, file no. 12-1203

Dear Commissioners,

This is a huge project with huge implications, so thank you for your time on it. My comments are as follows:

1. Option A Oak Retention Standards - the elimination of oak retention standards under existing policy 7.4.4.4 has not been accurately represented by County staff, nor has it been adequately analyzed in the FEIR.
 - a. County staff told the Board of Supervisors that the retention standards were difficult to interpret, and that there has always been the ability to remove 100% of the oak trees on-site for a proposed development. Neither of these is actually true, and there just is no solid reason to omit the retention standards from the updated policies (please see the excellent detailed accounting of Option A in Cheryl Langley's 4/19/17 public comments to you).
 - b. In the EIR, the No Project Alternative was analyzed as though Option B did not exist, rationalizing the elimination of Option A retention standards. In reality, Option B does exist and should have been considered in the Alternative's analysis. The status of Option B as overturned by the courts due to failed implementation does not render it 'gone'. Option B exists and needs to be implemented rather than used as a rationale to produce a flawed analysis of this Alternative.
 - c. The FEIR responses purposely (and irritatingly) misinterpret questions, and 6-7 is a good example. Comment 6-7 suggests the Agricultural exemptions be applied to excuse Agricultural activities from mitigations, but not from the retention requirements. The response concludes it would be unfair to apply the retention requirement to Agricultural activities and not to other development projects, which is most definitely not what was suggested. Retention is critical to habitat protection.

Please recommend to the Board that they maintain the existing Option A oak retention standards.
2. Cattle grazing in PCA's - cattle grazing within oak woodland clearly restricts its regeneration capability. Response to comment 6-9 expounds for 3 pages trying to rationalize why that's ok, while simultaneously admitting trees cannot effectively regenerate if the cattle is eating both the acorns and the seedlings. Several suggestions had been put forth to make these two things (..'grazing' and 'conservation area'...) compatible. Please put the costs of seedling protection, etc, onto the developer that wishes to utilize an area for 'conservation' rather than sacrificing the potential for a PCA to be regenerating.
3. Valley Oaks & Blue Oaks - it is not clear to me why the infinitely-slow-growing Blue Oak is not to receive the same protections as the Valley Oak. Please consider adding them to the species excluded from exemptions under MM BIO-2.
4. Nexus to TGPA/ZOU - Response to comments 6-7 falsely states "..it is not possible to predict the specific locations where expansion of agricultural activities would adversely affect oak woodlands." Attached is a list of over 3100 specific parcels within the Important Biological Corridors (IBC's) that were recently rezoned under the ZOU (Zoning Ordinance Update). It IS possible to predict the locations. Many of these parcels were flipped from residential (RE) to agricultural (RL, LA), expanding the acres of oak woodland that will be converted due to agricultural uses allowed by right *within the IBC*.

The impact of these conversions was not analyzed relative to the Bio policies that are being proposed here. The expansion of uses and exemptions being granted on these parcels that hold important habitat have yet to be reviewed. Master Response 7 page 2-22 says "*The 2004 Gen Plan established the IBC overlay, which provides a level of protection to wildlife movement corridors that link PCAs, natural vegetation communities, and/or areas having Natural Resource, Open Space and/or Agricultural base land use designations in the western portion of the County, including linkages across US Hwy50.*" Yet response to comment 6-30 confirms the mapping of IBC's under policy 7.4.2.8 to determine the extent of loss due to development, was never done as required.

There is legal action pending due to the bifurcation of the Biological Policy Update from the Targeted General Plan Amendment and Zoning Ordinance Update (TGPA/ZOU) EIR. Some of the problems with this bifurcation were pointed out in a number of DEIR comments, including 6-24, 6-27, 6-28, 6-29. The FEIR responses to those comments and Master Response 11 only confirm that separating these projects has allowed analysis to be missed.

The analysis of increased development potential under the TGPA/ZOU *depended* on the biological resource policies of the 2004 Gen Plan. The policy changes being proposed here remove protections that were assumed to be in place under the TGPA/ZOU, and are not mere clarifications as stated in the project description. This just validates the TGPA/ZOU lawsuit and is possibly problematic for any approvals granted on this project. Please revisit the policies to reinstate the protections being eliminated, including the oak retention standards.

Thank you for your consideration.

Ellen Van Dyke, Placerville
