Inflows

Summary Information and Inflow Methodology

Questions on methods used to determine inflow tons at your facility and why inflow tons reported from other facilities were changed.

Method(s) Used To Determine Tons Received

- Measurement methods using scales
 - Track material weight using certified scales.
- Exceptions – Measurement methods allowed by regulations without using scales
 - Use scales for commercial vehicles and volume to weight conversion factors to estimate self-haul tons.
 - I record self-haul loads by volume and estimate disposal tonnages using volume to weight conversion factors.

Outflow Methodology

Questions on how outflow tons are determined and jurisdiction of origin is tracked.

Method(s) Used To Determine Tons Sent

- Track outflow amounts based on my own measurements of the following:
 - Track material weight using my own certified scales
- Rely on the receiving facility to provide outflow amounts based on the facilities measurement of tons using the following methods:
 - Track material weight using facility certified scales

Method(s) Used To Determine Jurisdiction Of Origin For Direct Haul Material (msw) Or Green Material Potential Beneficial Reuse From Direct Haul

- Standard methods for each load of material accepted
 - Use periodic reports from the reporting entities delivering materials

Informational	N/A	Outflows	Total tons of recycling and composting material reported sent as outflow (recycling) for a quarter significantly different than prior year same quarter and exceeds the threshold difference.	The total tons of recycling/composting material sent to recycling/composting facilities in 2024 Q2 by your facility was significantly different (50% or more) than the amount sent out in the prior year same quarter. This flag is run to notify you of the significant change in outflow and help you determine if there are any data entry errors or issues in reporting accuracy in your report.
