

ADDENDUM TO EIR **Serrano Village J5/J6 Residential Project**

I. Introduction

This document constitutes an Addendum to the certified 1988 Environmental Impact Report (EIR) (State Clearinghouse No. 86122912) for the El Dorado Hills Specific Plan. This Addendum specifically addresses the modification of Land Use Designations and zoning for the portion of the Specific Plan area referred to as Villages J-5 and J-6, County Application SP13-0002/Z13-0002/Serrano Village J5/J6. This Addendum evaluates whether the re-designation/rezoning of 4.27 acres of land from neighborhood commercial to residential, and the inclusion of the 4.27 acres in an overall 36.03-acre residential village, would result in any new or substantially more adverse significant effects or require any new mitigation measures not identified in the previously certified EIR. The proposed revision to the project would not cause significant effects not identified in the EIR, nor increase the level of environmental effects to substantial or significant, and hence, no new mitigation measures would be necessary to reduce significant effects. No change has occurred with respect to circumstances surrounding the Project that would cause new or substantially more severe environmental effects which were not previously analyzed in the EIR. Therefore, no further environmental review is required beyond this Addendum.

The certified EIR can be accessed via the following link:
http://www.edcgov.us/Government/Planning/Zoning_Ordinances_for_Specific_Plans.aspx#EI%20Dorado%20Hills

II. Purpose of this Addendum.

This Addendum is focused upon the re-designation/rezone of the 4.27 acre J5 Parcel and its inclusion within the J5/J6 residential subdivision. It is intended to evaluate whether this modification to the EDHSP would result in any new or substantially greater effects or require any new mitigation measures not identified in the prior EIR. This Addendum, together with the EIR, will be utilized by the County as the environmental clearance for the project. Previous residential subdivisions within the EDHSP have been deemed exempt from further review pursuant to CEQA Guidelines Section 15182. Staff initially intended to apply this exemption, as the resulting residential development is generally consistent with the Specific Plan. However, with respect to the 4.27-acre portion of the project which is subject to a land use and zoning change, the exemption is technically inapplicable. Staff has determined that this Addendum is the appropriate document to analyze this project.

III. Background/Existing Villages J5 and J6 Approvals.

The El Dorado Hills Specific Plan (EDHSP) was adopted and an EIR was certified by the El Dorado County Board of Supervisors on July 18, 1988. The EDHSP consisted of approximately 4,000 acres with anticipated land uses consisting of commercial,

open space, and recreational facilities, along with 6,162 residential units at build-out. Approximately 4,000 residential parcels currently exist, and it is currently anticipated that at build-out, the residential unit count will not exceed 4,900, or 20% less than analyzed and approved.

Serrano Village J5/J6 is located in the eastern portion of the Specific Plan area along Bass Lake Road and is comprised of 36 acres surrounded by existing and future residential and commercial development within the EDHSP, the existing Bridlewood subdivision and the approved Bass Lake Hills Specific Plan. Village J was originally planned to accommodate 342 residential units and 45 acres of neighborhood commercial development over 117 acres. Through a series of planning director and planning commission modifications to the Specific Plan, consistent with the terms of initial project approvals, the amount of land available for neighborhood commercial development has been reduced to two parcels, an 11.68 acre parcel in Village J5 referred to as the Phase 1 Commercial (approved for 118,000 square feet of neighborhood commercial uses and a gas station), and a 4.27 acre parcel also located in Village J-5, across Sienna Ridge Road from the Phase 1 Commercial, referred to as the Phase 2 Commercial. Current approved entitlements for the Phase 2 Commercial Parcel include a 24-hour gas station with a car wash, a retail building with a drive-through, a pharmacy with a drive-through, along with typical mixed retail shop space. The Phase 2 Commercial has an approved Planned Development (PD) Permit and Tentative Parcel Map permitting the construction of 32,584 square feet of retail/commercial uses. Village J6 is comprised of 32.15 acres of land zoned for residential uses. A tentative subdivision map and planned development permit was approved for the J6 parcel on April 13, 2010, allowing the development of 204 clustered, two-story residential units within the 32.15 acres comprising Village J6. That approval was deemed exempt from further review per CEQA Guidelines Section 15182.

IV. Proposed Village J5/J6 Project

The current application proposes a 148-unit single-family residential subdivision map over the entire 36.03 acres comprised of the existing J6 residential parcel, together with the 4.27 acre J5, Phase 2 Commercial Parcel. Any residential development within the existing J6 parcel would be exempt from further environmental review pursuant to CEQA Guidelines Section 15182 as a residential subdivision consistent with an approved Specific Plan. However, because the 4.27 acre J5 parcel would require a rezone, staff has determined that the exemption provided by Section 15182 does not apply to that parcel. Therefore, this Addendum has been prepared.

Approval of the current application would result in the elimination of the approved 32,584 square foot retail/commercial project and gas station approved for Village J5, Phase 2. It would also eliminate the 204-unit residential tentative subdivision map approved for Village J6. Instead, the entire Village J5/J6 would be the subject of a new, reduced density, 148 unit tentative map for typical single-family residential units.

V. CEQA Framework For This Addendum

For a proposed modified project, State CEQA Guidelines (Sections 15162 and 15164) provide that an Addendum to an adopted EIR may be prepared if some changes or additions are necessary but none of the following conditions calling for the preparation of a subsequent EIR have occurred:

Substantial changes in the project which require major revisions to the EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

Substantial changes with respect to the circumstances under which the project is undertaken which require major revisions to the EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time of EIR adoption, shows any of the following:

- i) the project will have one or more significant effects not discussed in the EIR,
- ii) the project will result in impacts substantially more severe than those disclosed in the EIR,
- iii) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measure or alternative, or
- iv) mitigation measures or alternatives that are considerably different from those analyzed in the EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measure or alternative.

The purpose of this Addendum is to evaluate the redesignation of 4.27 acres within the Specific Plan area from commercial to residential zoning and the impacts of the overall J5/J6 residential subdivision. Based on the analysis provided below, an Addendum to the prior certified EIR is the appropriate CEQA document.

VI. Discussion

A. Traffic Impacts.

The project would not result in new or substantially more significant traffic impacts than previously analyzed. The EDHSP EIR anticipated and analyzed 6,162 residential units, together with 45 acres of commercial uses. Build-out of the EDHSP is currently contemplated to be 4900 residential units, or 80% of that analyzed by the EIR. The current approvals for the subject project consist of 32,584 square feet of commercial development and 204 single-family attached residential units. The

proposed project would eliminate 32,584 square feet of commercial development and would reduce residential units by 56. Whether analyzing the Specific Plan as a whole, or just focusing on the modification to the existing J5/J6 entitlements, daily vehicle trips would be reduced from those previously analyzed. A summary of the reduction in traffic impacts as a result of the proposed project is shown in the summary traffic analysis prepared by Fehr & Peers, attached hereto as Exhibit A. Total trips are reduced by 17%, while AM and PM peak hour trips are reduced by approximately 15% for the proposed land use as compared to the existing land use.

B. Noise Impacts.

Noise impacts would be reduced due to the elimination of the commercial development and its attendant loading zones, 24-hour gas station, car wash and drive-through windows. The duration of construction noise impacts will be reduced due to the smaller number of units to be constructed overall and the elimination of the commercial center. Noise impacts upon residential uses were fully addressed in the EIR and the mitigation measures adopted therein will be applicable to the J5/J6 project, consistent with previously developed residential villages within the EDHSP. The residences located within the proposed Village J5/J6 residential project would be exposed to noise from both Bass Lake Road and from the J5, Phase I commercial project. Per County policy, an Environmental Noise Analysis was prepared by Bollard Acoustical Consultants, dated November 22, 2016, a copy of which is attached hereto as Exhibit B. Standard noise mitigation measures have been incorporated within project conditions and no new or more severe impacts were found to exist from those previously analyzed. Certain noise attenuation measures previously imposed upon the Phase 2 Commercial will no longer be necessary.

C. Public Service Impacts.

No new or more severe effects would occur as a result of the proposed project. Public Service Impacts were fully analyzed in the EIR and the mitigation measures developed therein will be applicable to the project. The elimination of the commercial project and the reduction in residential unit count will result in corresponding reductions in calls for sheriff and fire services and in student generation as opposed to the existing Approved Projects. Water use, sewage generation, refuse collection, utility services, etc., would be lower due to the reduced number of residential units and the elimination of the commercial center. The included village park acreage is slightly increased, notwithstanding the unit count reduction.

D. Air Quality Impacts.

No new or more severe effects would occur as a result of the proposed project. The proposed land uses would result in less combined net levels of construction related CAP and precursor emissions in comparison to the approved land use. Operational emissions associated with the proposed land use would also be less than the approved land use. (See Memorandum from Ascent Environmental dated 4-26-17, attached as Exhibit C.)

E. Greenhouse Gas Impacts.

Given the reduction in residential units and the elimination of the retail uses, the proposed project would result in reduced GHG emissions (2009 MT CO₂e/year) than the approved land use. (See Memorandum from Ascent Environmental dated 4-26-17 attached as Exhibit B.)

F. Aesthetics Impacts.

No new or more severe aesthetic impacts will occur as a result of the proposed project. The reduced-scale residential village which replaces the approved project will be buffered from surrounding roadways by an enhanced, 25-foot minimum landscaping corridor and 6-foot soundwalls, consistent with other residential portions of the Serrano project. Residential units will be reduced from 204 two-story units to 148 units with both 1 and 2 story elevations, reducing the massing effect visible from adjacent roadways. The commercial development, including the large gas station canopy, will be replaced by residential development, resulting in less concentrated aesthetic impacts at the Bass Lake Road/Sienna Ridge intersection. The Bass Lake Road encroachment (driveway) into the Phase 2 commercial center will be eliminated. Slightly greater tree canopy preservation is afforded by the proposed land use as opposed to the approved land use.

G. Other Impacts.

Geologic Resources, Hydrology, Water Quality, Mineral Resources, Aesthetic Impacts, etc., were fully analyzed in the EIR, would be unaffected by the proposed project, and applicable mitigation measures developed remains in effect for the J5/J6 residential project.

VII. Conclusion

On the basis of the discussion above, the proposed Specific Plan modification would result in a reduced density residential project consistent with EDHSP policies. The proposed project will not result in new or more severe significant environmental effects not previously analyzed and therefore do not trigger additional CEQA review. Thus, this Addendum satisfies the requirements of CEQA Guidelines Sections 15162 and 15164.

MEMORANDUM

Date: April 11, 2017
 To: Andrea Howard, Parker Development
 From: David B. Robinson, Fehr & Peers

Subject: Serrano Village J (LOT H), J5, J6 and J7

RS10-2829

Fehr & Peers has completed a trip generation evaluation of the land use changes proposed for Serrano Villages J5 and J6. This memorandum outlines the proposed land use modifications, our evaluation methodology, and findings.

Land Use Modifications

Table 1 compares approved and proposed land use for Serrano Village J5 and J6. Figure 1 shows the proposed changes. Villages J5 and J6 are located east of the Bass Lake Road/Serrano Parkway Intersection. As proposed, the Village J5 (Phase 2) neighborhood retail would be changed to single family residential and combined with Village J6.

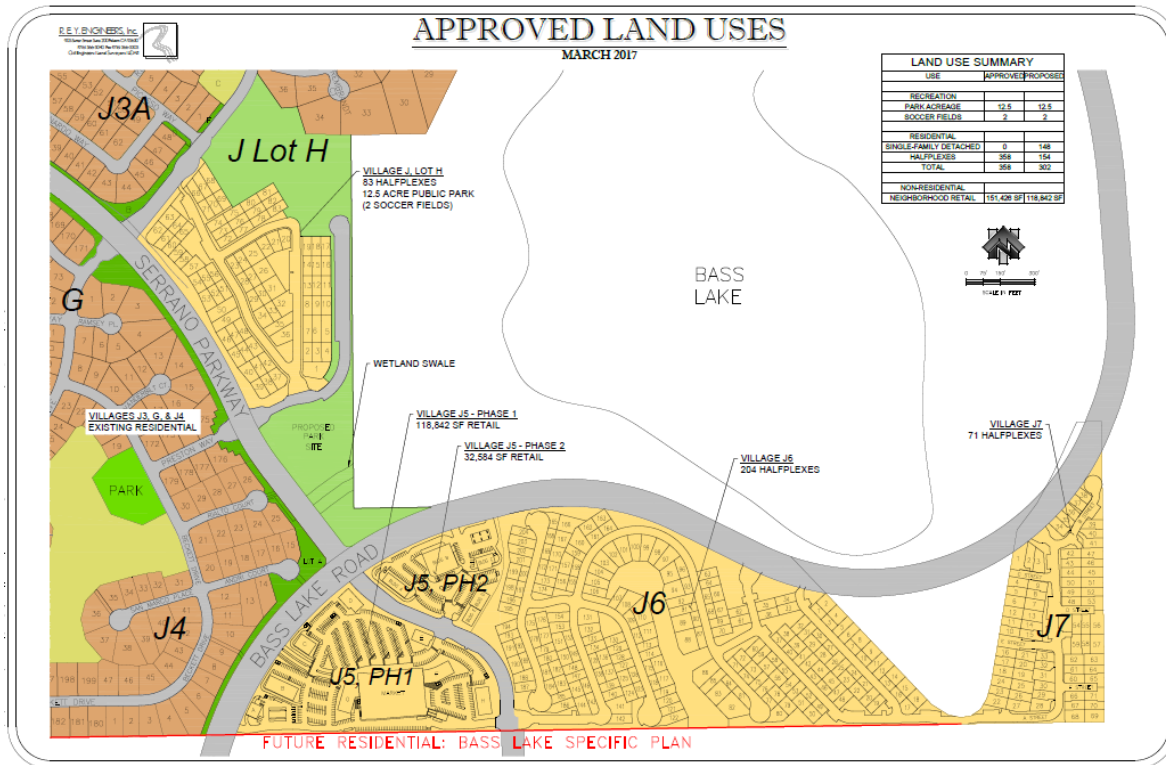

TABLE 1 PROPOSED LAND USE – SERRANO VILLAGES J5 AND J6		
Village	Approved Land Use	Proposed Land Use
J5	Neighborhood Retail (151,426 Square Feet)	Neighborhood Retail (118,842 Square Feet)
J6	Single Family Residential (204 Halfplex Units)	Single Family Residential (148 Dwelling Units)
Source: Fehr & Peers, 2017		

Evaluation Methodology

We prepared trip generation estimates for the approved and proposed land use summarized in Table 1, based on methodologies and trip generation rates presented in *Trip Generation, 9th Edition* (Institute of Transportation Engineers, 2012), field-measured trip generation rates for the public park land use (for AM peak hour and daily conditions) and park use descriptions provided by El Dorado Hills CSD Recreation Director (for PM peak hour conditions).

Figure 1: Approved and Proposed Land Uses

Trip Generation Evaluation

Table 2 compares AM peak hour, PM peak hour, and daily trip generation for the approved and proposed land use. Detailed calculations and trip rate descriptions are included in Exhibit A. The comparison include trip generation for Village J (Lot H), Village J5, Village J6, and Village J7. As shown in Table 2, the proposed land use will result in fewer trips than the approved land use.

Land Use	Peak Hour		Daily
	AM	PM	
Approved	423	1,024	12,459
Proposed	361	886	10,674
Difference (Proposed – Approved)	- 62	- 139	- 1,785

NOTES:
¹Trip rates are from *Trip Generation, 9th Edition* (Institute of Transportation Engineers, 2012)
²AM peak hour and daily trip generation for the public park land use is based on field measured trip generation at the Promontory (Alexandra Drive) and El Dorado Hills Community Park (El Dorado Hills Boulevard at Harvard Way).
³Trip generation for Neighborhood Retail use the Fitted Curve Equations from the Shopping Center (820) AM, PM and Weekday curves from the Trip Generation Manual, *9th Edition* (Institute of Transportation Engineers, 2012). AM and PM are based on weekday, peak hour of adjacent street traffic, one hour between 7 and 9 a.m. and 4 and 6 p.m.
⁴PM peak hour trip generation for the public park land use is based use descriptions provided by El Dorado Hills CSD Recreation Director (March 4, 2015 email correspondence). Trip generation assumes four soccer teams practicing on large fields and three team practicing on small field, 20 players per team [(8x20 + 6x20) = 280 players] gives 280 players. No reduction for carpools was assumed, so the trip generation assumes 280 vehicles with inbound and outbound trips based on field measured trip generation discussed in Footnote 2.

Environmental Noise Analysis

Serrano Village J5 & J6

El Dorado County, California

BAC Job # 2013-070

Prepared For:

Parker Development Company

Attn: Mr. Tom Howard
4525 Serrano Parkway
El Dorado Hills, CA 95762

Prepared By:

Bollard Acoustical Consultants, Inc.

Paul Bollard, President

November 22, 2016

Exhibit B

Introduction

The Serrano Village J5 & J6 project is located in the western portion of El Dorado County, in the unincorporated community of El Dorado Hills. Land uses in the project vicinity include single-family residential to the northwest and southeast, Bass Lake to the north, and rural residential to the south. Village J6 proposes a 148-lot subdivision while Village J5 would consist of commercial uses.

Traffic noise emanating from Bass Lake Road, as well as noise from the proposed Village J5 commercial uses are considered to be potentially significant noise sources affecting the proposed residential uses of Village J6. As a result, the project developer has retained Bollard Acoustical Consultants, Inc. (BAC) to prepare this analysis. The project area, residential site plan, and commercial site plan are shown in Figures 1, 2, and 3, respectively.

El Dorado County Noise Standards

The Noise Element of the El Dorado County General Plan contains policies to ensure that County residents are not subjected to noise beyond acceptable levels.

Policy 6.5.1.1 of the County Noise Element requires an acoustical analysis for new residential developments located in potentially noise-impacted areas.

Policy 6.5.1.2 states that where proposed non-transportation noise sources are likely to produce noise levels exceeding the performance standards of Table 1 at existing or planned residential uses, an acoustical analysis shall be required as part of the environmental review process so that noise mitigation may be included in the project design.

Policy 6.5.1.3 states that where noise mitigation measures are required to achieve the County's exterior noise standards, the emphasis of such measures shall be placed upon site planning and project design. The use of noise barriers shall be considered a means of achieving the noise standards only after all other practical design-related noise mitigation measures have been integrated into the project and the noise barriers are not incompatible with the surroundings.

Policy 6.5.1.7 states that noise created by new non-transportation noise sources shall be mitigated so as not to exceed any of the noise level standards of Table 1, as measured immediately within the property line of the receiving property.

Policy 6.5.1.8 establishes 45 and 60 dB L_{dn} as being acceptable interior and exterior noise levels, respectively, for new residential uses affected by traffic noise sources. Where it is not possible to reduce noise in outdoor activity areas to 60 dB L_{dn} or less using a practical application of the best available noise reduction measures, an exterior noise level of up to 65 dB L_{dn} may be allowed provided that available exterior noise reduction measures have been implemented and interior noise levels are in compliance with the 45 dB L_{dn} standard.

Table 1
Performance Standards for Non-Transportation Noise Sources
El Dorado County Noise Element – Community Areas

Noise Level Descriptor	Daytime (7 a.m. - 7 p.m.)	Evening (7 p.m. - 10 p.m.)	Nighttime (10 p.m. - 7 a.m.)
Hourly L_{eq} , dB	55 dB	50 dB	45 dB
Maximum Level, dB	70 dB	60 dB	55 dB

Note: Each of the noise levels specified above should be lowered by 5 dB for simple tone noises, noises consisting primarily of speech or music, or for recurring impulsive noises.

Please refer to Appendix A for definitions of acoustical terminology.

Existing Ambient Noise Environment

The noise environment in the project vicinity is primarily defined by traffic noise emanating from Bass Lake Road. To quantify existing ambient noise levels in the project area, BAC conducted long-term and short-term noise surveys at the locations shown on Figure 1 on August 7-9, 2013. Larson-Davis Laboratories (LDL) 820 precision integrating sound level meters were used to complete the noise level measurement survey. The meters were calibrated before use with a LDL Model CAL200 calibrator to ensure the accuracy of the measurements.

The equipment used meets all pertinent specifications of the American National Standards Institute for Type 1 sound level meters (ANSI S1.4). The noise level measurement results are summarized below in Table 2. The detailed long-term monitoring results conducted at Site A are provided in Appendices B and C.

Table 2
Summary of Ambient Noise Level Measurements
Serrano Village J5 & J6 Residential Development – August 7-9, 2013

Site	Date	Daytime				Nighttime		
		L_{dn}	L_{eq}	L_{50}	L_{max}	L_{eq}	L_{50}	L_{max}

Evaluation of Future Bass Lake Road Traffic Noise Levels

Traffic Noise Prediction Methodology

The Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA-RD-77-108) with the Calveno vehicle noise emission curves was used to predict traffic noise levels at the project site.

Traffic Noise Prediction Model Calibration

The FHWA Model provides reasonably accurate traffic noise predictions under “ideal” roadway conditions. Ideal conditions are generally considered to be long straight roadway segments with uniform vehicle speeds, a flat roadway surface, good pavement conditions, a statistically large volume of traffic, and an unimpeded view of the roadway from the receiver location. Such conditions did not appear to be in effect at this project site. As a result, Bollard Acoustical Consultants, Inc. conducted a careful calibration of the FHWA Model through site-specific traffic noise level measurements and concurrent traffic counts.

This calibration process was performed at two locations on the project site on August 7th, 2013. The traffic noise measurement locations, Sites 1 and 2, are shown in Figure 1. The detailed results of this procedure are provided in Appendix D. The FHWA Model was found to reasonably predict traffic noise levels at the measurement site. As a result, no calibration adjustment was applied to the FHWA Model for the prediction of future traffic noise levels at the project site.

Predicted Future Exterior Traffic Noise Levels at Outdoor Activity Areas

The FHWA Model was used with future traffic data to predict future traffic noise levels at the proposed outdoor activity areas of the project residences which are located adjacent to Bass Lake Road. Future traffic volume forecasts for Bass Lake Road were obtained from El Dorado County Traffic Model. The FHWA Model inputs and predicted future traffic noise levels at the project site are shown in Appendix E. The predicted future traffic noise levels are summarized below in Table 3.

Table 3
Predicted Future Traffic Noise Levels at Lots Nearest to Bass Lake Road
Serrano Village J5 & J6 – El Dorado County, California

Roadway	Predicted L _{dn} (dB) at Proposed Outdoor Activity Areas					
	Lot 15	Lot 23	Lot 28	Lot 77	Lot 96	Lot 101
Bass Lake Road	64	65	65	62	64	58

Note: A complete listing of FHWA Model inputs and results are provided in Appendix E.

The Table 2 data indicate that future traffic noise levels within the backyards of the nearest to Bass Lake Road will be exposed to the future traffic noise levels in the County's conditionally acceptable range of 60-65 dB L_{dn}. Because the predicted exterior levels along Bass Lake Road are within this conditionally acceptable range, a more specific analysis of potential noise impacts at the residences located adjacent to Bass Lake Road was prepared.

Traffic Noise Barrier Analysis

An analysis of noise barrier effectiveness was performed for this project and is summarized below in Table 4 for representative backyard areas. Proposed grading plans were reviewed to ensure that proposed site topography was included in the barrier analysis. The detailed results of the noise barrier effectiveness are provided as Appendix F.

Table 4
Barrier Analysis Results
Serrano Village J5 & J6 - El Dorado County, California

Barrier Height (feet)	Predicted L _{dn} (dB) at Proposed Outdoor Activity Areas				
	Lot 15	Lot 23	Lot 28	Lot 77	Lot 96
No barrier	64	65	65	62	64
5	56	57	56	53	59
6	55	56	55	52	58
7	54	55	54	51	57
8	53	54	53	50	56

Note: A complete listing of FHWA Model Noise Barrier Effectiveness inputs and results are provided in Appendix F.

As shown above in Table 4, the barrier analysis results indicate that a 5-foot wall constructed at the locations shown in Figure 2 would be adequate to achieve compliance with the County's exterior noise standard (60 dB L_{dn}).

The model result indicates that a 5-foot tall barrier would be adequate is based on the typical assumption that the receiver is located in the middle of the backyard area. If the receiver is located closer to the house (further from the road), the barrier would be more effective. However, at backyard receiver locations closer to the wall, the wall would be less effective as a standing individual could potentially see the roadway over the top of the barrier. To provide adequate noise attenuation, a solid barrier height of at least 6 feet is recommended.

Interior Noise Levels within Residences Located Adjacent to Bass Lake Road

With construction of the required Bass Lake Road noise barrier, future traffic noise levels are not predicted to exceed 60 dB L_{dn} at the exterior first-floor facades of residences constructed along Bass Lake Road. Due to reduced ground absorption at elevated positions, and lack of shielding by barriers at upper floor areas, second-floor facade exterior noise levels are predicted

to be approximately 67 dB L_{dn}. Based on this level, a building facade noise reduction of 22 dB or less would be required to achieve an interior noise level of 45 dB L_{dn} within second-floor rooms, and 15 dB of noise reduction would be required for first-floor facades.

Standard residential construction (wood siding, STC-26 windows, door weather-stripping, exterior wall insulation, composition plywood roof), results in an exterior to interior noise reduction of 25 dB with windows closed and approximately 15 dB with windows open. Therefore, standard construction would be acceptable for this project at all residences of this development. Nonetheless, mechanical ventilation should be provided to allow occupants to close doors and windows as desired for acoustical isolation.

Evaluation of Serrano Village J5 Commercial Center Noise Generation

Noise Sources Evaluated

The major noise-producing components of the Serrano Village J5 Commercial Center identified as potentially significant consist of parking lot activity, rooftop mechanical equipment, and loading dock activities. Each of these noise sources are evaluated separately below.

Parking Lot Noise

As a means of determining potential noise exposure due to project parking lot activities, Bollard Acoustical Consultants, Inc. utilized noise level data collected for previous parking lot noise studies. A typical sound exposure level (SEL) due to automobile arrivals/departures, including car doors slamming and people conversing, is approximately 70 dB at a distance of 50 feet. The approximate distance between the center of the nearest proposed parking lot area, located just north of Building F, and the closest residential areas to the northeast, Lots 7 and 8, is 150 feet.

Based on the capacity of the nearest parking lot, it was assumed that 42 cars could enter or leave the parking lot within a worst-case hour. Parking lot noise exposure was determined using the following equation.

$$\text{Peak Hour } L_{eq} = 70 + 10 \cdot \log(N) - 35.6$$

Where 70 is the SEL for a single automobile parking operation, N is the number of parking lot operations in a peak hour, and 35.6 is 10 times the logarithm of the number of seconds in an hour.

Using the equation and operations data described above, the proposed parking lot could be expected to produce a noise exposure of approximately 41 dB Peak Hour L_{eq} at the closest residential property lines. Therefore, noise exposure is expected to comply with the County's noise exposure standards and is not expected to be a significant impact on the closest residents and no mitigation measures are required.

Mechanical Equipment Noise

Heating, ventilating, and air conditioning (HVAC) requirements for this store will likely be met using rooftop mounted systems located atop the building. The units would be shielded from view of neighboring residential uses by intervening building parapets.

BAC reference file data for packaged HVAC systems indicate that a 12.5-ton packaged unit can be expected to generate an A-weighted sound power level of 85 dB. When projected to the nearest residential property lines 175 feet from the equipment location, the resulting levels compute to approximately 35 dB L_{eq} , including 5 dB of shielding provided by the building parapets.

Because the predicted HVAC equipment noise level of 35 dB L_{eq} is below measured existing ambient noise levels in the project vicinity and below County noise standards, no noise impacts are identified for this aspect of the project, and no additional consideration of noise mitigation measures would be warranted.

Truck Delivery and Unloading Noise

According to the commercial site plans shown on Figure 3, the commercial area would have only one truck loading dock, as the smaller stores would load through the front entrance with smaller trucks. The loading dock associated with the Market is approximately 750 feet from the residential project site and would be completely shielded from view of those proposed residences by the intervening market building. Given this distance and shielding, truck unloading operations at the commercial market are predicted to be inaudible at the proposed residential locations, and well below El Dorado County noise standards. As a result, no noise impacts are identified for this aspect of the project, and no additional consideration of noise mitigation measures is warranted.

Conclusions

The residential portion of Serrano Village J5 & J6 project site will be exposed to future Bass Lake Road traffic noise levels in excess of El Dorado County 60 dB L_{dn} exterior noise level standard for new residential developments. The following specific noise mitigation measures are recommended to achieve compliance with the County's noise standards:

- A 6-foot tall barrier would be required to reduce future traffic noise levels to approximately 60 dB L_{dn} in the backyards located adjacent to Bass Lake Road. Figure 2 shows the recommended locations of the noise barrier.
- Suitable materials for the traffic noise barriers include masonry and precast concrete panels. Other materials may be acceptable but should be reviewed by an acoustical consultant prior to use.
- Mechanical ventilation (air conditioning) should be provided for all residences in this development to allow the occupants to close doors and windows as desired to achieve compliance with the applicable interior noise level criteria.

These conclusions are based on the Bass Lake Road traffic assumptions cited in Appendix E and on noise reduction data for standard residential dwellings. Deviations from the Appendix E data, or the project site plan shown in Figure 2, could cause future traffic noise levels to differ from those predicted in this analysis. In addition, Bollard Acoustical Consultants, Inc. is not responsible for degradation in acoustic performance of the residential construction due to poor construction practices, failure to comply with applicable building code requirements, or for failure to adhere to the minimum building practices cited in this report.

Appendix A Acoustical Terminology

Acoustics	The science of sound.
Ambient Noise	The distinctive acoustical characteristics of a given space consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.
Attenuation	The reduction of an acoustic signal.
A-Weighting	A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response.
Decibel or dB	Fundamental unit of sound, A Bell is defined as the logarithm of the ratio of the sound pressure squared over the reference pressure squared. A Decibel is one-tenth of a Bell.
CNEL	Community Noise Equivalent Level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 - 10 p.m.) weighted by a factor of three and nighttime hours weighted by a factor of 10 prior to averaging.
Frequency	The measure of the rapidity of alterations of a periodic signal, expressed in cycles per second or hertz.
L_{dn}	Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.
Leq	Equivalent or energy-averaged sound level.
L_{max}	The highest root-mean-square (RMS) sound level measured over a given period of time.
Loudness	A subjective term for the sensation of the magnitude of sound.
Masking	The amount (or the process) by which the threshold of audibility is for one sound is raised by the presence of another (masking) sound.
Noise	Unwanted sound.
Peak Noise	The level corresponding to the highest (not RMS) sound pressure measured over a given period of time. This term is often confused with the Maximum level, which is the highest RMS level.
RT₆₀	The time it takes reverberant sound to decay by 60 dB once the source has been removed.
Sabin	The unit of sound absorption. One square foot of material absorbing 100% of incident sound has an absorption of 1 sabin.
SEL	A rating, in decibels, of a discrete event, such as an aircraft flyover or train passby, that compresses the total sound energy of the event into a 1-s time period.
Threshold of Hearing	The lowest sound that can be perceived by the human auditory system, generally considered to be 0 dB for persons with perfect hearing.
Threshold of Pain	Approximately 120 dB above the threshold of hearing.

Memo

455 Capitol Mall, Suite 300
Sacramento, CA 95814
916.444-7301

Date: April 26, 2017

To: Andrea Howard, Parker Development Company

From: Zach Miller and Honey Walters, Ascent Environmental

Subject: Serrano Village J6 Residential Air Quality and Greenhouse Gas Emissions

INTRODUCTION

The purpose of this memorandum is to estimate and compare the criteria air pollutant (CAP) (including precursor), and greenhouse gas (GHG) emissions of the Approved Land Use (204 halfplexes and 32,584 sf of retail uses) and the Proposed Land Use (148 single family dwellings). The results of emissions modeling using the California Emissions Estimator Model (CalEEMod) is presented below. Refer to Appendix A for a detailed summary of the modeling assumptions, inputs, and outputs.

MODELING RESULTS

Construction and operational emissions from the Approved Land Use and the Proposed Land Use were quantified and compared using CalEEMod Version 2016.3.1. Emissions were estimated based on data provided by the project applicant and trip generation rates from the Serrano Village Trip Generation Memo completed by Fehr & Peers.

Air Quality

Table 1 shows a comparison of the construction emissions for the Approved Land Use and Proposed Land Use development scenarios. As shown in Table 1, the Proposed Land Use would result in less combined net levels of construction-related CAP and precursor emissions in comparison to the Approved Land Use.

A comparison of the operational emissions for the Approved Land Use and Proposed Land Use is shown in Table 2. As shown in Table 2, the mass daily emissions generated by operational activities associated with the Proposed Land Use would be less than the operational emissions associated with the Approved Land Use for all sectors (i.e., area, energy, and mobile).

Greenhouse Gas

Table 3 summarizes the GHG emissions associated with the Proposed Land Use and the Approved Land Use. These emission estimates account for existing regulations pertaining to vehicle emissions, water consumption, wastewater and solid waste production, and building and energy efficiency standards. As shown in Table 3, the Proposed Land Use would result in less GHG emissions (2,009 MT CO₂e/year less) than that of the Approved Land Use.

Exhibit C

Table 1 Comparison of Construction -Generated Maximum Daily Emissions of Criteria Air Pollutants and Precursors

Construction Emissions	ROG (lbs/day)			NO _x (lbs/day)			CO (lbs/day)			PM ₁₀ (lbs/day) ²			PM _{2.5} (lbs/day) ²		
	Approved Land Use	Proposed Land Use	Net Change	Approved Land Use	Proposed Land Use	Net Change	Approved Land Use	Proposed Land Use	Net Change	Approved Land Use	Proposed Land Use	Net Change	Approved Land Use	Proposed Land Use	Net Change

Table 3 Greenhouse Gas Emissions Comparison Summary

Sector	Approved Land Use	Proposed Land Use	Net Change
	Greenhouse Gas Emissions (MT CO ₂ e/year)		
Area	165	119	-46
Energy	437	266	-171
Mobile	3,778	2,070	-1,708
Waste	113	57	-56
Water	37	24	-13
Construction Emissions, Amortized	70	55	-15
Total Mass GHG Emissions	4,600	2,591	-2,009

Notes:

See Appendix A for detail on model inputs, assumptions, and modeling parameters.

MT = metric tons
 CO₂e = carbon dioxide-equivalent

Source: Modeling and calculations conducted by Ascent Environmental 2017.

Air Quality and Greenhouse Gas Modeling

Serrano Village Adopted Land Use (Commercial) - El Dorado County AQMD Air District, Annual

Serrano Village Adopted Land Use (Commercial)
El Dorado County AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Bank (with Drive-Through)	5.75	1000sqft	0.57	5,750.00	0
Pharmacy/Drugstore with Drive Thru	14.50	1000sqft	1.45	14,500.00	0
Convenience Market With Gas Pumps	3.13	1000sqft	0.09	3,134.00	0
Strip Mall	9.20	1000sqft	0.92	9,200.00	0
Parking Lot	159.00	Space	1.43	63,600.00	0

1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2019
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MW hr)	290	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Serrano Village Adopted Land Use (Commercial) - El Dorado County AQMD Air District, Annual

Project Characteristics - PG&E. November 2015. Greenhouse Gas Emission Factors: Guidance for PG&E Customers.

Land Use - Lot acreages calculated based on % of CalEEMod default acreages.

Construction Phase - Per Project Description.

Grading - Per Project Description

Vehicle Trips - Trip generation rate of Neighborhood Retail from Fehr and Peers memo for Approved Land Use.

Woodstoves -

Energy Use - 5% energy reduction for Title 24 commercial land uses per CEC.

Water Mitigation - Per Project Description.

Off-road Equipment -

Off-road Equipment -

1.3 User Entered Comments & Non-Default Data

Serrano Village Adopted Land Use (Commercial) - El Dorado County AQMD Air District, Summer

Project Characteristics - PG&E. November 2015. Greenhouse Gas Emission Factors: Guidance for PG&E Customers.

Land Use - Lot acreages calculated based on % of CalEEMod default acreages.

Construction Phase - Per Project Description.

Grading - Per Project Description

Vehicle Trips - Trip generation rate of Neighborhood Retail from Fehr and Peers memo for Approved Land Use.

Woodstoves -

Energy Use - 5% energy reduction for Title 24 commercial land uses per CEC.

Water Mitigation - Per Project Description.

Off-road Equipment -

1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2019
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MW hr)	290	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Serrano Village Adopted Land Use (Commercial) - El Dorado County AQMD Air District, Winter

Project Characteristics - PG&E. November 2015. Greenhouse Gas Emission Factors: Guidance for PG&E Customers.

Land Use - Lot acreages calculated based on % of CalEEMod default acreages.

Construction Phase - Per Project Description.

Grading - Per Project Description

Vehicle Trips - Trip generation rate of Neighborhood Retail from Fehr and Peers memo for Approved Land Use.

Woodstoves -

Energy Use - 5% energy reduction for Title 24 commercial land uses per CEC.

Water Mitigation - Per Project Description.

Off-road Equipment -

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	7.36	Acre	8.13	320,601.60	0
Single Family Housing	204.00	Dwelling Unit	24.02	408,000.00	624

1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	290	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Serrano Village Adopted Land Use (Residential) - El Dorado County AQMD Air District, Annual

Project Characteristics - PG&E. November 2015. Greenhouse Gas Emission Factors: Guidance for PG&E Customers.

Land Use - Per Project Description and 3.06 people per DU.

Construction Phase - Per Project Description.

Grading - Per Project Description

Vehicle Trips - Passive parks not anticipated to generate vehicle trips.

Fleet Mix - No trips generated by passive park area.

Woodstoves - No woodstoves. 1 gas fireplace per DU.

Energy Use - 28% energy reduction for Title 24 per CEC.

Water Mitigation - Per Project Description.

1.0 Project Characteristics**1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	7.36	Acre	8.13	320,601.60	0
Single Family Housing	204.00	Dwelling Unit	24.02	408,000.00	624

1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	290	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Serrano Village Adopted Land Use (Residential) - El Dorado County AQMD Air District, Summer

Project Characteristics - PG&E. November 2015. Greenhouse Gas Emission Factors: Guidance for PG&E Customers.

Land Use - Per Project Description and 3.06 people per DU.

Construction Phase - Per Project Description.

Grading - Per Project Description

Vehicle Trips - Passive parks not anticipated to generate vehicle trips.

Fleet Mix - No trips generated by passive park area.

Woodstoves - No woodstoves. 1 gas fireplace per DU.

Energy Use - 28% energy reduction for Title 24 per CEC.

Water Mitigation - Per Project Description.

1.3 User Entered Comments & Non-Default Data

Serrano Village Adopted Land Use (Residential) - El Dorado County AQMD Air District, Winter

Project Characteristics - PG&E. November 2015. Greenhouse Gas Emission Factors: Guidance for PG&E Customers.

Land Use - Per Project Description and 3.06 people per DU.

Construction Phase - Per Project Description.

Grading - Per Project Description

Vehicle Trips - Passive parks not anticipated to generate vehicle trips.

Fleet Mix - No trips generated by passive park area.

Woodstoves - No woodstoves. 1 gas fireplace per DU.

Energy Use - 28% energy reduction for Title 24 per CEC.

Water Mitigation - Per Project Description.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	7.36	Acre	7.36	320,601.60	0
Single Family Housing	148.00	Dwelling Unit	28.67	414,400.00	453

1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	290	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Serrano Village Proposed Land Use - El Dorado County AQMD Air District, Annual

Project Characteristics - PG&E. November 2015. Greenhouse Gas Emission Factors: Guidance for PG&E Customers.

Land Use - Per Project Description.

Construction Phase - Per Project Description

Grading - Per Project Description

Vehicle Trips - Passive parks not anticipated to generate vehicle trips.

Woodstoves - No woodstoves. 1 gas fireplace per DU.

Energy Use - 28% energy reduction for Title 24 per CEC.

Water Mitigation - Per Project Description.

Fleet Mix - No trips generated by passive park area.

Climate Zone	1			Operational Year	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	290	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Serrano Village Proposed Land Use - El Dorado County AQMD Air District, Summer

Project Characteristics - PG&E. November 2015. Greenhouse Gas Emission Factors: Guidance for PG&E Customers.

Land Use - Per Project Description.

Construction Phase - Per Project Description

Grading - Per Project Description

Vehicle Trips - Passive parks not anticipated to generate vehicle trips.

Woodstoves - No woodstoves. 1 gas fireplace per DU.

Energy Use - 28% energy reduction for Title 24 per CEC.

Water Mitigation - Per Project Description.

Fleet Mix - No trips generated by passive park area.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	7.36	Acre	7.36	320,601.60	0
Single Family Housing	148.00	Dwelling Unit	28.67	414,400.00	453

1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	290	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Serrano Village Proposed Land Use - El Dorado County AQMD Air District, Winter

Project Characteristics - PG&E. November 2015. Greenhouse Gas Emission Factors: Guidance for PG&E Customers.

Land Use - Per Project Description.

Construction Phase - Per Project Description

Grading - Per Project Description

Vehicle Trips - Passive parks not anticipated to generate vehicle trips.

Woodstoves - No woodstoves. 1 gas fireplace per DU.

Energy Use - 28% energy reduction for Title 24 per CEC.

Water Mitigation - Per Project Description.

Fleet Mix - No trips generated by passive park area.

MEMORANDUM

Date: April 11, 2017
 To: Andrea Howard, Parker Development
 From: David B. Robinson, Fehr & Peers

Subject: Serrano Village J (LOT H), J5, J6 and J7

RS10-2829

Fehr & Peers has completed a trip generation evaluation of the land use changes proposed for Serrano Villages J5 and J6. This memorandum outlines the proposed land use modifications, our evaluation methodology, and findings.

Land Use Modifications

Table 1 compares approved and proposed land use for Serrano Village J5 and J6. Figure 1 shows the proposed changes. Villages J5 and J6 are located east of the Bass Lake Road/Serrano Parkway Intersection. As proposed, the Village J5 (Phase 2) neighborhood retail would be changed to single family residential and combined with Village J6.

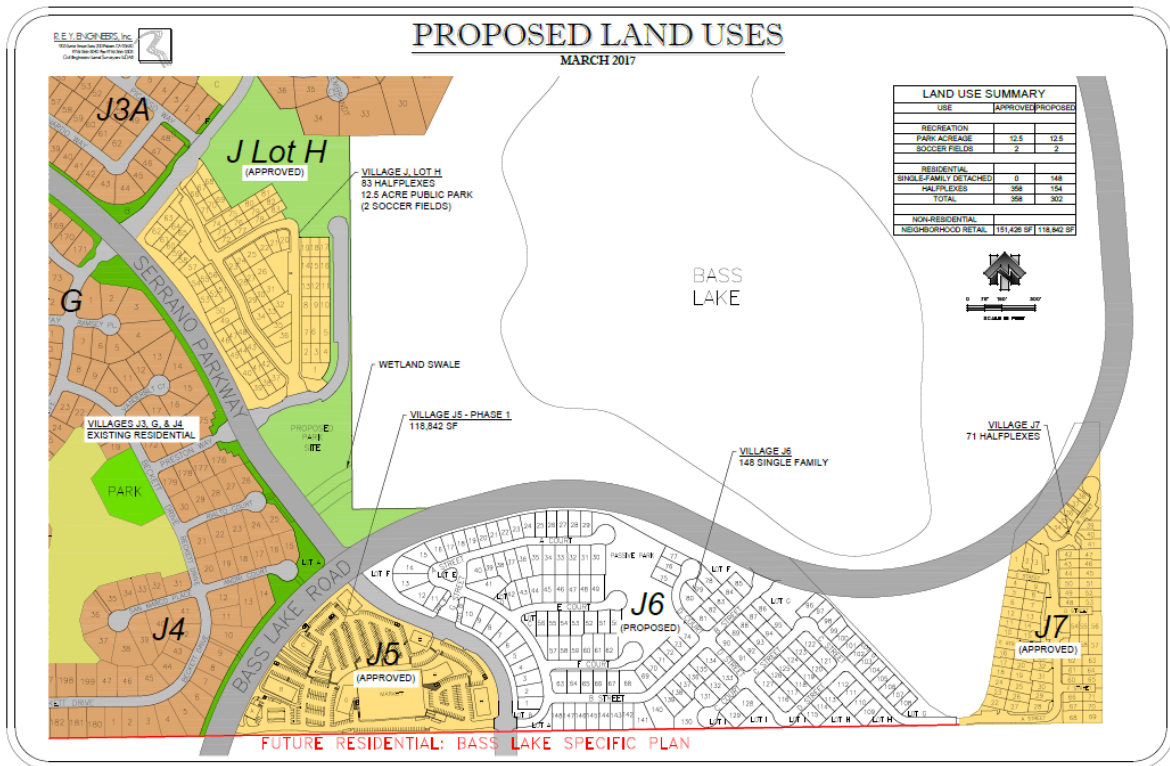

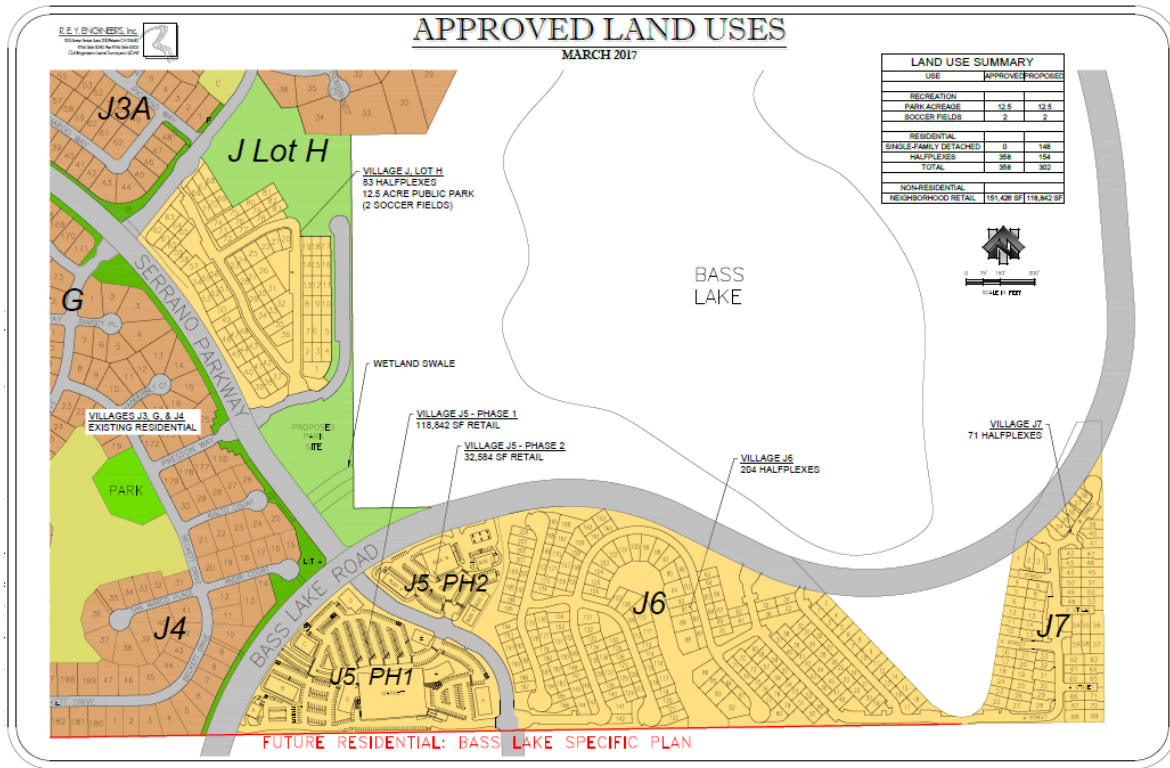

TABLE 1 PROPOSED LAND USE – SERRANO VILLAGES J5 AND J6		
Village	Approved Land Use	Proposed Land Use
J5	Neighborhood Retail (151,426 Square Feet)	Neighborhood Retail (118,842 Square Feet)
J6	Single Family Residential (204 Halfplex Units)	Single Family Residential (148 Dwelling Units)
Source: Fehr & Peers, 2017		

Evaluation Methodology

We prepared trip generation estimates for the approved and proposed land use summarized in Table 1, based on methodologies and trip generation rates presented in *Trip Generation, 9th Edition* (Institute of Transportation Engineers, 2012), field-measured trip generation rates for the public park land use (for AM peak hour and daily conditions) and park use descriptions provided by El Dorado Hills CSD Recreation Director (for PM peak hour conditions).

Figure 1: Approved and Proposed Land Uses

Trip Generation Evaluation

Table 2 compares AM peak hour, PM peak hour, and daily trip generation for the approved and proposed land use. Detailed calculations and trip rate descriptions are included in Exhibit A. The comparison include trip generation for Village J (Lot H), Village J5, Village J6, and Village J7. As shown in Table 2, the proposed land use will result in fewer trips than the approved land use.

TABLE 2			
TRIP GENERATION – WITH PROPOSED LAND USE			
Land Use	Peak Hour		Daily
	AM	PM	
Approved	423	1,024	12,459
Proposed	361	886	10,674
Difference (Proposed – Approved)	- 62	- 139	- 1,785

NOTES:
¹Trip rates are from *Trip Generation, 9th Edition* (Institute of Transportation Engineers, 2012)
²AM peak hour and daily trip generation for the public park land use is based on field measured trip generation at the Promontory (Alexandra Drive) and El Dorado Hills Community Park (El Dorado Hills Boulevard at Harvard Way).
³Trip generation for Neighborhood Retail use the Fitted Curve Equations from the Shopping Center (820) AM, PM and Weekday curves from the Trip Generation Manual, *9th Edition* (Institute of Transportation Engineers, 2012). AM and PM are based on weekday, peak hour of adjacent street traffic, one hour between 7 and 9 a.m. and 4 and 6 p.m.
⁴PM peak hour trip generation for the public park land use is based use descriptions provided by El Dorado Hills CSD Recreation Director (March 4, 2015 email correspondence). Trip generation assumes four soccer teams practicing on large fields and three team practicing on small field, 20 players per team [(8x20 + 6x20) = 280 players] gives 280 players. No reduction for carpools was assumed, so the trip generation assumes 280 vehicles with inbound and outbound trips based on field measured trip generation discussed in Footnote 2.
