Memorandum

To: Zachary Oates, El Dorado County

From: Matt Kowta, MCP, Managing Principal

Date: April 17, 2025 (Revised)

Re: El Dorado County 2045 Housing and Employment Projections

Introduction

This memorandum updates BAE's countywide (West Slope, i.e., western slope of El Dorado County, minus the City of Placerville) growth projections memo, dated November 21, 2023, with allocations of housing and employment growth by sub-area (Community Regions/Balance of County). This is the second and final deliverable of a project commissioned by El Dorado County, for BAE to update West Slope residential and non-residential growth projections last approved by the Board of Supervisors in March of 2020. This revised memo was prepared to incorporate updated base data provided by Kimley-Horn Associates (KHA) on April 10 2025.

The first sections of this memo are carried over from BAE's November 2023 countywide growth projections memo, followed by the addition of new sections detailing the methodology and results for the sub-area growth allocations. In 2019, the County of El Dorado commissioned BAE Urban Economics, Inc. (BAE) to prepare updated housing and employment growth projections to assist the County in the preparation of an updated Travel Demand Model for the Major Update to the Traffic Impact Mitigation (TIM) Fee Program and to inform the 2016 – 2020 Five-Year General Plan review and the 2021 – 2029 Housing Element Update. The updated growth projections covered the western slope of El Dorado County for the period 2018 to 2040, which the Board approved on March 17, 2020. For the current assignment, El Dorado County requested that BAE extend the growth projections to 2045 to support another fee program update, for what is now called the Traffic Impact Fee (TIF) Program.

The first sections of this memo present the countywide growth projections, extended to 2045, which were reviewed by the Board of Supervisors at their December 5, 2023 meeting, and then approved by the Board at their January 9, 2024 meeting. These sections have been updated slightly, to incorporate 2023 base year estimates of housing and employment, which were completed subsequent to the Board's January meeting.

Base Year Housing and Employment Estimates

The growth projections cover only the West Slope comprising the area outside the Lake Tahoe Basin that is under the jurisdiction of the Tahoe Regional Planning Agency. Two sources of estimates for the existing housing and jobs in the West Slope specifically are the Sacramento

San Francisco Sacramento Los Angeles Washington DC Atlanta New York City

www.bae1.com 25-0181 C 1 of 16

Area Council of Governments (SACOG), and estimates compiled on behalf of El Dorado County (County) by Kimley-Horn Associates (KHA) based on the County's Geographic Information System (GIS) mapping data for the 2019 growth projections and updated to 2023 estimates by Kimley-Horn as part of the current project. Other sources only provide estimates for the unincorporated area as a whole (CA state Department of Finance, "DOF" housing unit estimates) or for the county as a whole (Caltrans population, housing, and employment estimates).

For the November memo, BAE utilized the 2018 development estimates from the growth projections adopted in 2020 to serve as the baseline for the updated projections, as Kimley-Horn was still working on collecting and organizing the data to update the baseline development information to reflect 2023 conditions. Kimley-Horn has since completed the update, as summarized in Appendix A, which contains the 2010 to 2023 estimates of West Slope housing units and jobs. For this memo, the countywide growth projections have been updated to incorporate the 2023 baseline conditions, instead of 2018.

Potential Residential Growth Rates

The Population/Housing section of Table 1 calculates potential residential growth rates for El Dorado County as a whole and for the West Slope, from the California State Department of Finance (DOF), SACOG, and Caltrans. This section also presents two additional growth rate scenarios analyzed for the November memo, which are based on trending historic growth rates calculated from estimates by DOF for the 2000 to 2023 period and by the County for the 2010 to 2018 period, through 2045. It should be noted that the DOF growth rates are for population; however, for the purposes of this analysis, the population growth rates are used as a proxy for potential housing unit growth rates. The Caltrans growth rates are for households, which are also used as a proxy for potential housing unit growth. In these cases, the implicit assumption is that average household sizes and housing unit vacancy rates will not vary substantially from current levels. The 2010 to 2023 DOF growth trend is for the whole county, less the cities of South Lake Tahoe and Placerville. The implicit assumption is that the growth of this slightly larger area, which includes the Tahoe Basin portion of the unincorporated county, is indicative of the potential West Slope growth rate.

As shown in the Population/Housing section of Table 1, the resulting 2018 to 2045 growth rates imply a range of residential growth for the county, ranging between -0.28 percent and 0.73 percent annually. The countywide population growth projection from the State Department of Finance (DOF) is the anomaly within this group of projections. Although DOF's long-term population projection for El Dorado County is not inconsistent with DOF's statewide population projections, which indicate a slightly declining population through 2045 and later, the projection for El Dorado County is counter to the other four projections which suggest modest growth in housing units. It is possible that in El Dorado County, there could in fact be a slightly declining population, but that the housing unit count would continue to grow. This could occur when the average number of residents per household declines faster than the

count of housing units increases. For example, the average number of persons per housing unit could decline with an aging population and declining proportion of households with children present and/or if there is an increasing proportion of housing units that are being used as vacation homes/short-term rentals — either of which could plausibly occur in El Dorado County over the next 20 to 25 years.

Based on the above information, BAE recommends that the outlier DOF growth rate should be discounted for the purposes of estimating the County's likely long-term housing unit growth rate.

Potential Employment Growth Rates

The Employment section of Table 1 presents employment growth rates from SACOG and Caltrans. The Employment section of Table 1 also includes a third growth rate that is based on trending Caltrans' 2000 to 2023 employment growth estimates out through 2045, and a fourth growth rate that is based on trending the County's estimated 2010 to 2018 job growth out through 2045. The two Caltrans-derived growth rates are based on countywide jobs, with the implicit assumption being that the countywide growth rates are indicative of the West Slope growth rates.

The 2018 to 2045 employment growth rate based on the 2010 to 2023 growth trend (Caltrans) is the anomaly among the group, yielding an average annual growth rate for the 2018-2045 time period that is more than twice the next highest employment growth rate. BAE recommends that this outlier growth rate should be discounted for the purposes of estimating the County's likely employment growth rate.

Housing Unit Projections 2023 to 2045

The Housing Units section of Table 2 shows housing unit projections for the West Slope from 2023 to 2045, using the KHA's 2023 estimate of 57,100 housing units as the starting point. Then, the Housing Units section of Table 2 applies residential growth rates from Table 1, excluding the DOF projection, to the base year figures to project housing unit growth for 2025, 2030, 2035, 2040, and 2045. As shown in the Housing Units section of Table 2, the resulting projections range from 64,149 housing units based on SACOG's projected growth rate through 2045 to 66,960 housing units in 2045 (based on Caltrans' projected countywide population growth rate through 2045). For planning purposes, BAE suggests the County consider a growth projection reflecting the average of the residential projections shown in the Housing Units section of Table 2. This would yield 65,432 total residential units in the West Slope area by 2045, representing a 0.62 percent annual average residential growth rate through 2045.

Employment Projections 2023 to 2045

The Employment section of Table 2 shows a series of employment projections for the 2023 to 2045 period, drawing from the potential employment growth rates from the Jobs section of Table 1 and applying them to KHA's estimated 2023 West Slope base year jobs estimate,

excluding the outlier growth rate that was projected by extending the 2010 to 2023 Caltrans employment growth estimates. From KHA's estimated 2023 jobs base of 37,712, the different employment projections yield 2045 job totals ranging from 41,654 jobs, using the 2010 to 2018 trend from the County estimates, to 45,331 jobs, using the SACOG employment growth rate from 2016 to 2040, extended to 2045.

As with the residential growth projections, BAE suggests the County use an average of the projections shown in the Employment section of Table 2 to project West Slope job growth for the 2023 to 2045 period, which yields an average annual employment growth rate of 0.62 percent and a 2045 job total of 43,197. Coincidentally, this is the same rate of growth as estimated for housing units.

Summary

Based on the data and methodology described above BAE recommended in our November 21, 2023 countywide growth projections memo that the County use the following West Slope housing unit and employment growth assumptions for planning purposes:

	2023	2045	Estimated Growth	Avg. Annual 2023-2045 Growth Rate
Housing Units	57,100	65,432	8,332 housing units	0.62%
Jobs	37,712	43,197	5,485 jobs	0.62%

These figures provide the County with growth assumptions that fall within the middle range of the growth projections available from various sources (DOF, Caltrans, SACOG) and the County's own GIS data available for this study, after discounting the outlier projections based on the DOF population projection and the 2010 to 2023 Caltrans historical employment growth rates. Further, the recommended housing unit and employment growth rates suggest the County will produce new housing at a rate that will roughly correspond with the rate of new employment growth, meaning that the growth pattern would be reasonably balanced between residential and non-residential development, and the County's jobs/housing balance would be relatively stable over the next 22 years.

The El Dorado Board of Supervisors considered the growth projections and recommendations at their December 25, 2023 meeting and again at their January 9, 2024 meeting, ultimately approving the recommended growth rates.

Sub-County Growth Allocations

Upon confirming the Board of Supervisors' endorsement of the recommended residential and non-residential growth projections for the West Slope, BAE updated the base year (existing) residential and non-residential development assumptions from 2018 to 2023, based on the

data collected and compiled by Kimley-Horn. BAE then analyzed the growth patterns from 2010 through 2023 and developed sub-area growth allocations to the five Community Regions (El Dorado Hills, Cameron Park, Diamond Springs, Shingle Springs, and Placerville) and the balance of the West Slope area, considering a number of factors, including:

- The Board-endorsed West Slope residential and non-residential growth projections
- Historical growth patterns between 2010 and 2023
- The distribution of base-year (2023) development by sub-area
- Available development capacity by sub-area as updated by Kimley-Horn

Historical 2010 to 2023 Growth Patterns

After the December 5, 2023 and January 9, 2024 Board of Supervisors meetings, BAE proceeded with the sub-county growth allocations, with input and assistance from Kimley-Horn. BAE first summarized the 2010 to 2023 growth patterns documented in Appendix A in Table 3a, based on Kimley-Horn's analysis of development activity since 2019. As shown in Table 3a, El Dorado Hills captured the majority (80.5 percent) of the West Slope's residential growth, but a relatively small portion (10.1) percent) of the West Slope's job growth. The majority (66.4%) of the employment growth occurred in areas outside of the Community Regions. The residential growth pattern is not surprising given much of El Dorado's housing demand is from people who commute west to jobs in Sacramento County suburbs such as Folsom and Rancho Cordova and other locations and El Dorado Hills represents a convenient residential location for these commuters. The concentration of job growth outside of the Community Regions was counter-intuitive, until considering that the growth 936 new jobs were created with the opening of the Red Hawk Casino, which lies just outside the Cameron Park and Shingle Springs Community Regions.¹

In preparing to allocate EI Dorado's 2023 to 2045 employment and population growth to subareas within the West Slope, BAE considered these growth patterns as well as the existing concentrations of housing and jobs. Specifically, because the casino development was an anomaly (i.e., it is a major job center that could only be developed due to a unique set of regulatory and economic circumstances that placed it outside of the County's developed urban areas), BAE adjusted Table 3a to remove the casino jobs and create a job growth pattern that may be considered more typical of the historic pattern in the unincorporated areas of El Dorado County's West Slope. The adjusted growth pattern is shown in Table 3b, and shows that after removing the casino jobs, a more typical 26.2 percent of the County's job growth between 2010 and 2023 occurred in the Balance of the West Slope areas, with the other 73.8 percent distributed across the Community Regions, with El Dorado Hills (22.1 percent of the total growth) and Diamond Springs (28.8 percent of the growth) capturing the largest shares.

5

¹ The casino opened at the end of 2008; however, due to lags in data reporting/collection the employment increase was captured within the 2010 to 2023 time period. This adjustment does not include incremental increases in employment associated with subsequent expansions, such as the Apex entertainment center in late 2022 or the new hotel in May of 2023.

Existing Concentrations of Jobs and Housing

Next, BAE also considered the existing 2023 distribution of housing units and jobs as also likely to be a strong indicator of how growth may proceed between 2023 and 2045, based on the logic that the relative concentrations of housing and jobs throughout the Community Regions and the Balance of the West Slope are indicative of locational characteristics that will tend to attract more new development to those locations that have historically been attractive for development. The share of existing housing units and jobs located in each Community Region and the Balance of the West Slope as of 2023 is shown in Table 4, alongside the share of adjusted 2010 to 2023 growth from Table 3b in each of these areas.

Composite Housing and Jobs Growth Factors

For new housing development BAE then weighted each of these factors by 50 percent, to calculate housing "Composite Growth Shares", to use to allocate the projected overall West Slope 2023 to 2045 growth in housing to specific Community Regions and the Balance of the West Slope. For jobs growth, BAE considered a third factor, which is the pattern of new residential growth. Job growth and housing growth tend to be closely linked, with new housing following growth in job opportunities, and jobs growing in areas with housing growth due to expanding consumer demand to support commercial activity and the accompanying jobs. After allocating housing growth to county sub-areas (see discussion below) BAE calculated the percentage distribution of new housing by sub-area to create "Housing Growth Factors", as shown in Table 4. BAE then weighted the 2010 to 2023 job growth pattern, the 2023 jobs base, and the housing growth factors by 25 percent, 25 percent, and 50 percent, respectively, to develop a composite jobs growth factor to use to allocate 2023 to 2045 job growth.

Sub-Area Residential and Non-Residential Demand Estimates

With the overall West Slope housing and job growth projections from Table 2 as the starting point, BAE then used the composite residential and jobs growth shares shown in Table 4 to make an initial sub-county allocation of housing and job demand for the years 2023, 2025, 2030, 2035, 2040, and 2045. The figures in Table 4 can be considered to represent the anticipated demand for housing and non-residential development, by sub-area, if there were no constraints on the availability of land for new development.

Sub-Area Growth Re-Allocation

BAE cross-checked the initial sub-areas allocations against data regarding the remaining development capacity in each of the sub-areas. Kimley-Horn provided current estimates of residential and non-residential development capacity by updating the development capacity estimates from the 2019/2020 analysis, using building permit data to identify property that has been developed since the prior study's development capacity estimates were prepared and to identify new development capacity created through various development project applications and approvals processed by the County since that time. The current residential and non-residential development capacity estimates are included on Table 5.

Residential Growth Allocations

The cross-checking indicated that that El Dorado Hills would run out of residential capacity between 2040 and 2045; thus, BAE re-allocated excess demand for this area to Cameron Park in the 2040 to 2045 time period. This was based on the assumption that the excess demand would likely spill over to the nearest community region that has the most substantial growth potential and that is also closest to the commuting destinations to the West of El Dorado County along Highway 50. The cross-checking also indicated that the Balance of West Slope area would run out of residential capacity between 2025 and 2030; thus, Table 5 reallocated excess Balance of West Slope housing demand to the Community Regions with remaining development capacity (i.e., Cameron Park, Diamond Springs, Shingle Springs, and Placerville) based on their relative shares of West Slope composite housing demand. The results of these residential sub-area allocations and re-allocations are shown in the upper part of Table 5.

Single-Family and Multifamily Housing Distribution. Table 5 also provides a breakout of the allocated residential unit growth to single-family and multifamily units. This breakout is based on the availability of land for single-family residential development versus multifamily residential development in each Community Region and the Balance of the West Slope, recognizing that El Dorado County generally has a limited supply of multifamily housing units relative to the total housing stock and demand will likely be strong for multifamily units as a more affordable alternative to detached single-family homes for-sale in the coming years. Here again, it is assumed that unmet demand for multifamily housing in a location like El Dorado Hills, which has limited multifamily development capacity relative to its single-family development capacity, will spill over into other nearby Community Regions where there are services and amenities to support multifamily residential developments and that fewer multifamily units will go into Diamond Springs and Placerville (unincorporated) and none are expected in the Balance of the West Slope where infrastructure to support higher density multifamily development is limited.

Employment Growth Allocations

As summarized in Table 6, BAE followed a similar procedure in allocating the job growth, using the composite growth shares calculated on Table 4 for jobs; however, BAE found that all of the projected job growth could be accommodated within the respective Community Regions and the Balance of the West Slope, with no need to re-allocate the initial employment demand estimates among sub-areas. In each Community Region and in the Balance of the West Slope, a cursory comparison between the job allocations and the available non-residential land in each respective sub-area indicated that there is adequate land in each area to accommodate the initial employment demand estimates from Table 4. For example, at a typical floor area ratio of 0.25, and one employee per 500 square feet of building space, a retail development would have an employment density of about 20 employees per acre. Employment densities for services uses would be similar, and employment density for office uses would likely be higher. While employment densities for light industrial uses and warehousing and distribution

uses could be lower, the densities would still be represented by multiple employees per acre. Most of the West Slope employment growth is likely to be in retail, services, and office-based sectors, which tend to have higher employment densities. None of the sub-areas are projected to have an average new employment density of more than 4.0 employees per acre if all available non-residential land were developed to accommodate the anticipated job growth. Thus, it can be expected that there is sufficient development capacity in each of the sub-areas to accommodate the allocated employment growth.

Public Review

BAE and County staff will review and discuss the growth allocations contained in this memo with the Board of Supervisors.

											2018 to 2045 Avg. Annual

⁽a) From Appendix A.

⁽b) From Table 3b.

⁽c) Composite growth share equally weights 2010 to 2023 growth pattern and 2023 existing housing base.

⁽d) Housing growth factor is based on projected housing growth allocations (Table 5).

⁽e) Composite jobs growth factor weights 2010 to 2023 growth pattern, 2023 existing jobs base, and housing growth factors 25%, 25%, and 50%, respectively.

⁽a) From Table 2 average projection.

⁽b) Based on achievable density estimates prepared by Kimley-Horn in 2019 and new development activity (reductions in capacity) and new project applications and approvals (increases in capacity) since that time.

⁽c) Balance of West Slope runs out of residential capacity between 2025 and 2030. Excess demand for this area is re-allocated to Diamond Springs, Shingle Springs, and Placerville. El Dorado Hills runs out of residential capacity between 2030 and 2035. Excess demand for this area is re-allocated to Cameron Park. Cameron Park runs out of residential development capacity between 2040 and 2045. Excess development capacity is re-allocated to Shingle Springs.

⁽d) This represents each sub-area's projected share of housing growth during the 2023 to 2045 projection period.
