Subject: Resolution Ratifying Ordinance No. 2025.09.17 of the Cameron Park Community District, which adopts the 2025 California Fire Code with amendments related to local climatic, geological and topographic conditions.

Dear Ms. Hennike:

The Cameron Park Community District (CPCSD) is requesting the Board of Supervisors (BOS) ratify its Ordinance No. 2025.09.17, which adopts the 2025 California Fire Code as amended due to specific local climatic, geological and topographic conditions. The BOS must also delegate enforcement of the ordinance to either the Fire District (or its representative) or the Chief Building Official.

Therefore, we request the County Board of Supervisors ratify Ordinance No. 2025.09.17 with amendments to the 2025 California Fire Code, and delegate the enforcement of that Ordinance to the CPCSD Fire Chief.

This resolution has no direct fiscal impact to the County.

Sincerely,

**FINDINGS OF FACTS
FOR CHANGES OR MODIFICATIONS TO THE CALIFORNIA CODE OF
REGULATIONS, TITLE 24, PART 9**

In connection with the amendments enacted by Section 2 and 3 relating to the California Fire Code and its appendix, 2025 edition, the Cameron Park Community Services District (CPCSD) makes the following findings pursuant to Health and Safety Code Section 17958.5, 17958.7 and 18941.5. The changes are reasonably necessary because of local climatic, topographical or geological conditions.

CPCSD hereby adopts pursuant to Section 18941.5 of the California Health and Safety Code, the following findings of fact:

- (a) Under this adopting ordinance, specific amendments have been established which are of a more restrictive nature than those adopted by the State of California (State Buildings Standards Code, State Housing & Community Development Codes) commonly referred to as Title 24 & Title 25 of the California Code of Regulations. These amendments to the California Fire Code 2025 edition, have been recognized by the CPCSD to address the fire problems, concerns and future direction by which CPCSD can establish and maintain an environment which will afford a level of fire and life safety to all who live and work within its boundary.
- (b) The International Code Council has assumed responsibility for the International Fire Code and International Fire Code Standards. The International Code Council provided a means for participation by all code enforcement officials from throughout the country as well as industry representatives, consultants, and other private parties with an interest in the International Fire Code.
- (c) The International Fire Code, being the 2024 edition thereof, published by the International Code Council is a nationally recognized compilation of proposed rules, regulations and standards of said Council.
- (d) Said International Fire Code has been printed and published as a Code in book form within the meaning of Section 50022.1 of the Government Code of the State of California.
- (e) Under the provisions of Section 18941.5 of the Health and Safety Code, local amendments are based on climatic, topographical and geological conditions. The findings of fact contained herein address each of these situations and present the local situation, which either singularly or in combination, caused the aforementioned amendments to be adopted.

LOCAL CONDITIONS

A. These amendments are justified on the basis of a local climatic condition. CPCSD is subject to precipitation, relative humidity, temperature extremes, and high velocity winds.

1. Precipitation & relative humidity

a. Conditions

Precipitation. Average annual precipitation ranges from approximately 25 to 32 inches per year. Approximately 88% of the average rainfall occurs during the months of November through April and 12% from May through October. This area has experienced major droughts in the last two decades: 1986 -1991, 1998 – 2003, 2007 - 2009, and 2011 - 2015. It is possible that more droughts will occur in the future based on the weather cycle pattern.

Relative Humidity. During the summer months (May through September), the daily humidity generally ranges around 20% and occasionally drops to the low teens.

2. Temperature

a. Conditions

Temperatures. During the summer months (May through September), the daily temperatures commonly exceed 90 degrees Fahrenheit, with temperatures having been recorded as high as 115 degrees.

3. Winds

a. Conditions

Winds. The summer prevailing winds are out of the south and southwest. However, north winds occur during the spring (April and May), the fall (September and October), and occasionally during the summer months (June, July and August). Velocities are generally in the range of five to fifteen miles per hour, gusting to 30 miles per hour during the summer months.

SUMMARY

These local climatic conditions affect the acceleration, intensity and size of fire in the community. Times of little or no rainfall and high temperatures create extremely hazardous conditions, particularly as they relate to residential roof fires and wildfire conflagrations. The climatic conditions are one of the greatest impacts to fire behavior and other major emergency events due to their uncontrollable nature.

- B. These amendments are justified on the basis of a local geologic and topographic conditions. CPCSD is subject to varied terrain, slopes, increased vegetation, varied surface features, hazardous building operations, and terrain risk factors.

1. Geological location

a. Conditions

Geological Location. Cameron Park is located in the foothills of the Sierra at an altitude range of approximately 1,200 feet to 1,450 feet above sea level.

2. Size and population

a. Conditions

Size and Population. The CPCSD (Fire Department) encompasses approximately eleven (11) square miles and has a current population of approximately 19,000 residents.

3. Seismic Location

a. Conditions

Seismic Location. The nearest identified fault zone running through the District is the Bear Mountain Fault. This fault zone is split into several branches which transect the area between Folsom and Shingle Springs. No recent geologic activity has been observed along this fault. However, studies of the east branch of the fault zone, conducted by Woodward-Clyde Associates for the Auburn Dam, and by Tierra Engineering Consultants near Folsom Lake, indicate that the fault may be reactivating based on recent tectonic trends and should be considered potentially active.

4. Topography

a. Conditions

Topography. The topography of the District varies from level 0% slope to terrain with over a 40% slope. The valley floor is relatively flat with gentle slopes and consists of grassland and trees. The east and west sides of the valley floor increase to approximately 40% slopes and consist of trees, brush and grass-covered range land. The greatest degree of slope occurs in the northern end of the District and extends northeast from there. Hilly terrain throughout the area provides gullies or areas referred to as "chimneys" which accelerate the spread of fire.

5. Roads and streets

a. Conditions

Roads and Streets. The District has seen an accelerated degree of urban and commercial development within the last 15 years. With this development comes the increase of vehicular traffic and congestion which can have a direct effect on the response time of emergency apparatus.

6. Building Clearances

a. Conditions

Building Clearances. As residential development continues to occur in the District, the clearance between homes has decreased which increases the ability of fire to spread from one home to another by both radiation and convection heat.

SUMMARY

The above geological and topographical conditions increase the magnitude, exposure, accessibility problems and fire hazards that the Department must handle. Fire following an earthquake has the potential of causing greater loss of life and damage to property than the earthquake itself.

Other variables may tend to increase the situation:

1. The damage that may occur to the water system, and; The extent of isolation due to roadway damage, overpass collapse and debris blocking the roadway.
