RESIDENT SATISFACTION SURVEY

Presented to El Dorado County

May 2007

El Dorado County Resident Satisfaction Survey

Table of Contents

El Dorado County Resident Satisfaction Survey

El Dorado County commissioned Godbe Research to conduct a survey of County residents to assess their satisfaction with County services and their perception of the quality of life in El Dorado County.

The *Research Objectives* for this study were to:

➢ Assess residents' overall opinion of the quality of life in El Dorado County, as well as the features that residents like most, and like least, about living in the County;

➢ Assess residents' satisfaction with a variety of services provided by El Dorado County and estimate the relative importance of these services;

➢ Survey residents' interactions with County departments and agencies, and the factors that influence satisfaction with these interactions;

➢ Survey a variety of behavioral and demographic characteristics of El Dorado County residents, including working status, preferred information source, and voter registration.

This report begins with a *Methodology Overview* that introduces the sampling design and data collection techniques used in the study.

The *Key Findings* section offers a question-by-question analysis of the survey including:

➢ Direction of El Dorado County and Overall Quality of Life

➢ Most and Least Liked Features of the County

➢ Most Important Issues in Next Five Years

➢ Higher Rated Qualities of the County

➢ Lower Rated Qualities of the County

➢ Overall Satisfaction with County Services

➢ Satisfaction with County Services

➢ Derived Importance of County Services

➢ Priorities for Action Matrix

➢ Interaction with County Departments

➢ Satisfaction with Interaction

➢ Reason for Satisfaction or Dissatisfaction with Interaction

➢ Respondents' Working Status

➢ Respondents' Location and Type of Work

➢ Interest in Similar Work within the County

➢ Preferred Information Source

➢ Awareness, Use, and Informativeness of the County Website

The *Conclusions* section summarizes the results of the study and offers recommendations.

Appendix A explains the *Detailed Methodology* used in the study.

Appendix B provides the *Topline Report* with overall survey results.

Appendix C presents the complete *Crosstabulation Tables.*

Appendix D presents the complete *Questionnaire* used for the study.

El Dorado County Resident Satisfaction Survey

Methodology Overview

GODBE RESEARCH
Gain Insight

➢ Data Collection	Telephone interviewing
➢ Universe	135,502 El Dorado County adult residents
➢ Fielding Dates	April 17 to April 19, 2007
➢ Interview Length	18 minutes
➢ Sample Size	600
➢ Margin of Error	$\pm$ 4.0

Survey Methodology

The sample was drawn from a random sample of El Dorado County residents using the random digit dialing (RDD) method. To qualify to participate in the study, an individual had to live in El Dorado County and be at least 18 years of age. Interviews were conducted from April 17 through April 19, 2007, and each interview typically lasted 18 minutes. A total of 600 individuals completed the survey, representing a universe of approximately 135,502 adult residents of El Dorado County*. The study parameters resulted in a margin of error of plus or minus 4.0 percent for the overall sample (n = 600).

Sample & Weighting

Once collected, the data were compared with the 2005 U.S. Census estimates for El Dorado County to examine possible differences between the demographics of the sample of respondents and the actual universe. After examining these details, the data were weighted to the actual demographic proportions of the residents of El Dorado County. Specifically, the sample was weighted by the age of respondents.

Randomization Questions

To avoid the problem of systematic position bias, where the order in which a series of questions is asked systematically influences the answers, the items in Question 7 and 9 were randomized such that the respondents were not consistently asked these items in the same order.

Multiple Response Questions

Some questions within the survey were presented in a multiple response format, such as Question 11. For this type of question, each respondent was given the opportunity to select more than one response option or mention more than one item. For this reason, the response percentages will typically sum to more than 100, and these represent the percent of individuals that mentioned a particular response, rather than the percent of the total responses.

*2005 U.S. Census estimate

Methodology Overview

➢ **Key Segmentation Analyses**

- Area of residence (East slope vs. West slope)
- Length of residence
- Homeownership status
- Age
- Household income
- Gender

➢ **Additional Segmentation Analyses Available in Appendix C**

- Overall direction of the County
- County Departments
- Internet access
- Household makeup
- Working status
- Work within El Dorado County
- Type of work
- Work for similar company
- Education level
- Ethnicity
- Voter registration status

Segmentation Analyses

In addition to looking at the overall results for a particular question, it is also useful to examine the responses of different demographic and behavioral groups. Generally, Godbe Research comments only on the statistically significant differences in key segments in this type of report. The present report highlights all statistically significant differences that were observed in responses by *area of residence (East slope vs. West slope, categorized by the respondent's zip code in Question ii), length of residence, homeownership status, age, household income, and gender.*

In order to facilitate the presentation and interpretation of the results, each segmentation table in the text of this report presents only the specific subgroups in which statistically significant differences were observed. For percentages broken down by all subgroups, and other demographic and behavioral groups, including overall perception of the direction of the County and voter registration status, see Appendix C.

El Dorado County Resident Satisfaction Survey

Direction of El Dorado County

GODBE RESEARCH
Gain Insight

1. Overall do you believe that things in El Dorado County are going in the right direction, wrong direction, or staying the same?

Staying the same
27.6%

Wrong direction
24.9%

Right direction
39.0%

DK/NA
8.5%

In the first substantive question of the survey, the respondents were asked whether things in the County are going in the right direction, wrong direction, or staying the same. In response to this question, 39 percent of the respondents reported that things are going in the "Right direction" and 28 percent reported "Staying the same." In contrast, approximately 25 percent of the respondents reported that things are going in the "Wrong direction." The remaining 9 percent of the respondents either did not know or did not provide an answer to the question (DK/NA).

Direction of El Dorado County
Differences in Demographic Groups

GODBE RESEARCH
Gain Insight

	Area of Residence		Length of Residence		
	East Slope	**West Slope**	**2 years or less**	**11 to 19 years**	**20 years or more**
Right direction	28.3%	41.3%	38.5%	49.1%	34.2%
Staying the same	36.2%	25.8%	26.0%	24.6%	23.4%
Wrong direction	25.4%	24.7%	16.6%	16.1%	34.7%
DK/NA	10.2%	8.2%	19.0%	10.2%	7.8%

The discussion below highlights the significant differences that were observed between key demographic groups in their overall opinion of the direction of El Dorado County.

Area of Residence

Significantly more of the respondents who reside on the West slope reported that things are going in the "Right direction" than their counterparts who reside on the East slope. In contrast, those who live on the East slope were significantly more likely to report that things are "Staying the same."

Length of Residence

Significantly more of the respondents who have lived in El Dorado County for 20 years or more, than those who have lived in the County for 2 years or less and 11 to 19 years, reported that things are going in the "Wrong direction."

The purpose of the next question was to assess the respondents' overall opinion of living in El Dorado County. The majority of the respondents (88%) stated that they are satisfied with the overall quality of life in El Dorado County, with 53 percent "Very satisfied" and 35 percent "Somewhat satisfied." In contrast, only 1 in 10 respondents reported that they are dissatisfied with the quality of life, either "Very dissatisfied" (2%) or "Somewhat dissatisfied" (8%).

Overall Quality of Life
Differences in Demographic Groups

GODBE RESEARCH
Gain Insight

|	Area of Residence		Length of Residence		Homeownership Status	
	East Slope	West Slope	3 to 5 years	11 to 19 years	Own	Rent
Very satisfied	37.8%	56.6%	47.8%	65.4%	58.5%	33.0%
Somewhat satisfied	37.9%	34.2%	34.2%	27.0%	31.6%	47.4%
Somewhat dissatisfied	15.2%	6.1%	13.6%	2.5%	5.3%	16.5%
Very dissatisfied	3.9%	2.1%	1.7%	2.4%	2.7%	1.3%
DK/NA	5.2%	1.1%	2.8%	2.6%	1.9%	1.7%

The discussion below highlights the significant differences that were observed between key demographic groups in their satisfaction with the overall quality of life in El Dorado County.

Area of Residence

Similar to the results of Question 1, the West slope respondents expressed a more positive opinion of El Dorado County. Specifically, a greater percent of the respondents who live on the West slope reported that they are "Very satisfied" than the respondents who reside on the East slope. In contrast, significantly more of the respondents on the East slope than the West slope reported that they are "Somewhat dissatisfied."

Length of Residence

Significantly more of the respondents who have lived in the County for 3 to 5 years reported that they are "Somewhat dissatisfied" with the overall quality of life, when compared to those who have lived in the County for 11 to 19 years. Thus, contrary to the results of Question 1, there is no indication that the longer-term residents hold a negative opinion of the County.

Homeownership Status

Overall, homeowners appear more satisfied with the quality of life in El Dorado County. Specifically, significantly more of the homeowners than the renters reported that they are "Very satisfied," whereas significantly more of the renters reported that they are either "Somewhat satisfied" or "Somewhat dissatisfied."

Overall Quality of Life
Differences in Demographic Groups

GODBE RESEARCH
Gain Insight

	Age					Household Income				Gender	
	18 to 29	30 to 39	40 to 49	50 to 64	65 and over	Under $25,000	$50,000 to $100,000	$100,000 to $150,000	$150,000 or more	Male	Female
Very satisfied	33.9%	57.2%	54.1%	58.4%	57.2%	27.7%	53.4%	66.8%	63.4%	45.8%	60.8%

DK/NA	4.6%	0.0%	0.7%	0.9%	4.3%	2.5%	1.9%	0.0%	0.0%	2.3%	1.3%

The discussion below continues to highlight the significant differences that were observed between key demographic groups in their satisfaction with the overall quality of life in El Dorado County.

Age

Significantly fewer of the respondents age 18 to 29 years reported that they are "Very satisfied" with the quality of life than their counterparts age 30 years and over. However, even among this younger age group, approximately 80 percent of the respondents reported being at least "Somewhat satisfied" with the quality of life in the County.

Household Income

The respondents whose total household income before taxes in 2006 was $50,000 or more were significantly more likely to report that they are "Very satisfied" with the quality of life than the respondents with income under $25,000. Conversely, significantly more of the respondents with income under $25,000 than those with income ranging from $100,000 to $150,000 reported being "Somewhat satisfied."

Gender

On average, the women reported greater satisfaction with the quality of life than the men. Specifically, significantly more of the women than the men reported "Very satisfied," whereas significantly more of the men reported that they are either "Somewhat satisfied" or "Very dissatisfied" with the quality of life.

El Dorado County Resident Satisfaction Survey

Most Liked Feature of the County

GODBE RESEARCH
Gain Insight

3. What one thing do you like most about living in El Dorado County? Please only name the one feature you like most.

Feature	Percentage
Natural environment	31.9%
Rural atmosphere	26.7%
Sense of community	14.4%
High quality of life	10.3%
Climate	6.8%
Outdoor activities	3.8%
Other	3.3%
DK/NA	2.8%

To further explore the respondents' perceptions of the quality of life in El Dorado County, they were asked to name the feature they most like about living in the County. The respondents could name any feature that came to mind, and they were not prompted by the interviewer in any way. Godbe Research reviewed the responses to this question, and classified them into the eight categories shown in the above chart. The most frequently reported feature, with 32 percent of the respondents, was "Natural environment." The respondents also frequently mentioned "Rural atmosphere" (27%) and "Sense of community" (14%).

The following are a sample of the verbatim responses that were included in the top three categories:

Natural Environment:
- ➤ "I like the fact that it is in the mountains."
- ➤ "It is just a beautiful place to live."
- ➤ "I enjoy the open space that is present here."

Rural Atmosphere:
- ➤ "I like the small-town feel."
- ➤ "I like having four acres and no one around me."
- ➤ "It's out of the city. There's a more country-like atmosphere."

Sense of Community:
- ➤ "The thing I like most is the people."
- ➤ "I like the slower lifestyle."
- ➤ "The people that live here are great."

Most Liked Feature of the County
Differences in Demographic and Attitudinal Groups

	Direction of County			Area of Residence		Homeownership Status	
	Right direction	Staying the same	Wrong direction	East Slope	West Slope	Own	Rent
Natural environment	30.3%	26.3%	42.3%	53.7%	27.1%	29.7%	40.0%
Rural atmosphere	25.8%	25.3%	29.4%	6.3%	31.2%	29.4%	16.7%
Sense of community	21.5%	13.4%	6.1%	8.8%	15.7%	14.7%	12.4%

The discussion below highlights the significant differences that were observed between key demographic and attitudinal groups in the three top mentioned positive features of the County – "Natural environment," "Rural atmosphere," and "Sense of community."

Direction of County

In addition to the key demographic groups, the responses to this question also were analyzed according to the respondents' opinions of the direction of the County. Significantly more the respondents who reported that things in the County are going in the "Wrong direction," than their counterparts who reported that things are "Staying the same," mentioned that they most like the "Natural environment." Additionally, the respondents who reported that things are going in the "Right direction" reported that they most like the "Sense of community" than the respondents who reported that things are going in the "Wrong direction."

Area of Residence

Significantly more of the respondents who reside on the East slope reported that they most like the "Natural environment," whereas more of the West slope respondents reported that they most like the "Rural atmosphere."

Homeownership Status

The renters were significantly more likely to mention the "Natural environment" than the homeowners. In contrast, significantly more of the homeowners than the renters mentioned the "Rural atmosphere."

The discussion below continues to highlight the significant differences that were observed between key demographic groups in two* of the top mentioned features of the County – "Natural environment" and "Rural atmosphere."

Age

Significantly more of the respondents age 40 years and over mentioned that they most like the "Rural atmosphere" than their counterparts age 18 to 29 years. Further, the respondents age 50 years and over also were significantly more likely to mention this feature than the respondents age 30 to 39 years.

Household Income

A significantly greater percent of the respondents with income under $25,000 reported that they most liked the "Natural environment" than those with income of $150,000 or more.

_____

No differences were observed between these groups in their "Sense of Community" responses.

The respondents also were asked to name the feature they least like about living in the County. Similar to Question 3, the respondents could name any feature that came to mind, and they were not prompted by the interviewer in any way. Godbe Research reviewed the responses to this question, and classified them into the 11 categories shown in the above chart. The most frequently reported feature, with 22 percent of the respondents, was "Traffic congestion/Road conditions."* "Growth" and "Isolated" also were frequently reported, with 17 percent and 13 percent of the respondents, respectively.

The following are a sample of the verbatim responses that were included in the top three categories:

Traffic Congestion/Road Conditions:
> ➤ "Traffic is a problem."
> ➤ "The roads need a lot of work."
> ➤ "Traffic needs improvement."

Growth:
> ➤ "There is a casino that is going in, and I don't like that idea."
> ➤ "It is growing way too fast."
> ➤ "The rising population is horrible."

Isolated:
> ➤ "There are hardly any neighborhoods here."
> ➤ "There is a lack of shopping centers."
> ➤ "The lack of health services is the thing I like least."

---

*Overall 22% of responses were categorized as Traffic congestion/Road conditions, with 16 percent of the respondents mentioning "Traffic congestion" and 6 percent mentioning "Road conditions." Please see Appendix B for greater detail on the 11 categories shown in the above chart.

Traffic congestion	10.8%	24.1%	23.2%	25.1%
Isolated	8.2%	13.6%	23.9%	6.8%

The discussion below highlights the significant differences that were observed between key demographic groups in two of the top mentioned negative features of the County – "Traffic congestion" and "Isolated."

<u>Area of Residence</u>

Significantly more of the respondents who reside on the West slope than the East slope mentioned that the "Traffic congestion" is the feature they like least about living in El Dorado County.

<u>Length of Residence</u>

The respondents who have lived in the County for 3 to 5 years were significantly more likely to mention that they least like that the area is "Isolated" than their counterparts who have lived in the County for 6 to 10 years.

The discussion below highlights the significant differences that were observed between key demographic groups in two of the top mentioned negative features of the County – "Traffic congestion" and "Growth."

Age

Significantly more of the respondents age 50 to 64 years, than those age 18 to 29 years, mentioned that "Traffic congestion" is the feature they like the least about living in the County.

Gender

A significantly greater percent of women than men reported that "Growth" is the feature they like the least.

The respondents next were asked if the feature that they like the least about living in the County is the most important issue facing the County in the next five years. Approximately 61 percent of the respondents reported "Yes," that this feature is the most important issue facing the County, whereas 29 percent reported "No."

The 174 respondents who reported "No" to Question 5, that the feature they like least about living in the County is not the most important issue in the next five years, were asked to name the most important issue. Similar to the results of Question 4, "Regulating growth" and "Reducing traffic congestion" were the two most frequently reported issues, with 37 percent and 28 percent of the respondents, respectively. Rounding out the top three categories was "Managing the cost of living" which was reported by 10 percent of the respondents.

Most Important Issues in Next Five Years
Differences in Demographic Groups

GODBE RESEARCH
Gain Insight

	Area of Residence		Homeownership Status	
	East Slope	West Slope	Own	Rent
Regulating growth	18.7%	39.5%	32.2%	50.9%
Reducing traffic congestion	14.0%	29.8%	31.4%	13.5%

The discussion below highlights the significant differences that were observed between key demographic groups in the two top mentioned important issues facing the County – "Regulating growth" and "Reducing traffic congestion."

<u>Area of Residence</u>

Significantly more of the respondents who live on the West slope than the East slope mentioned that "Regulating growth" is the single, most important issue facing El Dorado County in the next five years.

<u>Homeownership Status</u>

The renters were significantly more likely than the homeowners to mention "Regulating growth," whereas the homeowners were significantly more likely to mention "Reducing traffic congestion."

The respondents were read a series of 10 items related to living in El Dorado County, and asked whether they are satisfied or dissatisfied with each item. The responses to these questions were coded such that mean scores could be calculated: "Very satisfied" = 4.0, "Somewhat satisfied" = 3.0, "Somewhat dissatisfied" = 2.0, "Very dissatisfied" = 1.0, and the respondents who reported "DK/NA" were eliminated from this analysis. To facilitate the presentation of these results, the responses to this series of questions are continued in the chart that follows. Shown above are the five items that received relatively higher satisfaction ratings. (Please note: the above chart does not contain the exact language used in the questionnaire, please see Appendix D for the precise wording of these items.)

Overall, the results suggest that the residents are most satisfied with the safety of El Dorado County, as three of the top five items speak to safety. As shown in the above chart, the respondents reported being the most satisfied with "The safety of walking alone in your neighborhood during the day" (mean score = 3.8). This mean score indicates that, on average, the residents of El Dorado County are close to "Very satisfied" with this aspect of living in the County. "The overall image and reputation of El Dorado County" also received high satisfaction ratings, with a mean score of 3.6.

To put these mean scores into perspective the percent breakdown of the top-rated item "The safety of walking alone in your neighborhood during the day" was 82 percent "Very satisfied," 13 percent "Somewhat satisfied," 1 percent "Somewhat dissatisfied," 2 percent "Very dissatisfied," and 2 percent "DK/NA." In contrast, when asked about "The rate of population growth in El Dorado County" (shown in the chart on the next page), 16 percent of the respondents reported that they are "Very satisfied," 35 percent reported "Somewhat satisfied," 23 percent "Somewhat dissatisfied," 20 percent "Very dissatisfied," and 5 percent "DK/NA."

Higher Rated Qualities of the County

	Area of Residence		Homeownership Status	
	East Slope	**West Slope**	**Own**	**Rent**
The overall quality of your local neighborhood	3.44	3.62	3.63	3.45
El Dorado County as a place to raise children	3.07	3.65	3.61	3.29
The safety of walking alone in your neighborhood at night	3.48	3.46	3.51	3.28

The discussion below highlights the significant differences that were observed between demographic groups in three of the highest rated qualities of the County: "The overall quality of your local neighborhood"; "El Dorado County as a place to raise children"; and "The safety of walking alone in your neighborhood at night."

<u>Area of Residence</u>

The respondents who reside on the West slope are significantly more satisfied with their local neighborhood, as well as the County as a place to raise children, than those who reside on the East slope. These results are consistent with those regarding the direction of things in the County (Q1) and overall quality of life in the County (Q2).

<u>Homeownership Status</u>

The ratings for each of the three above qualities were significantly higher among the homeowners than among the renters.

	Age		Household Income					Gender	
	30 to 39	65 and over	Under $25,000	$25,000 to $50,000	$50,000 to $100,000	$100,000 to $150,000	$150,000 or more	Male	Female
El Dorado County as a place to raise children	3.58	3.55	3.14	3.66	3.56	3.45	3.74	3.51	3.56
The safety of walking alone in your neighborhood at night	3.65	3.22	2.98	3.48	3.43	3.62	3.70	3.59	3.33

The discussion below highlights the significant differences that were observed between key demographic groups in two of the highest rated qualities of the County: "El Dorado County as a place to raise children"; and "The safety of walking alone in your neighborhood at night."

Age

The respondents age 30 to 39 years are significantly more satisfied with "The safety of walking alone in your neighborhood at night" than their counterparts age 65 years and over.

Household Income

The results suggest that the respondents with higher household income are more satisfied with specific qualities of the County. As shown in the table above, the respondents with income from $25,000 to $100,000 and $150,000 or more are significantly more satisfied with "El Dorado County as a place to raise children" than the respondents with income under $25,000. Similarly, the respondents with income of $25,000 or more rated "The safety of walking alone in your neighborhood at night" significantly higher than those with income under $25,000.

Gender

The men's satisfaction ratings were significantly higher than the women's for "The safety of walking alone in your neighborhood at night."

El Dorado County Resident Satisfaction Survey

To complete the analysis of the responses to Question 7, shown in the current chart are the five areas which received relatively lower satisfaction ratings. The two items which received the relatively lowest ratings were "The overall quality of new development in El Dorado County" and "The rate of population growth in El Dorado County," with mean scores of 2.6 and 2.5, respectively. These results indicate that, on average, the respondents are significantly less than "Somewhat satisfied" with these two areas of the County.

The rate of population growth in El Dorado County	2.67	2.47	2.70	2.77	2.63	2.31	2.55	2.33

The discussion below highlights the significant differences that were observed between key demographic groups in the five qualities of the County that were rated relatively lower.

Area of Residence

The ratings of the West slope respondents were significantly higher than their East slope counterparts for three of the qualities: "El Dorado County as a place to retire"; "The overall image and reputation of El Dorado County"; and "El Dorado County as a place to work."

Length of Residence

In general, those who have lived in the County for a shorter amount of time are more satisfied with the above qualities of the County. Specifically, the respondents who have resided in the County for 2 years or less rated "El Dorado County as a place to retire" significantly higher than respondents who have lived in the County for 20 years or more. Similarly, the respondents who have lived in the County for 2 years or less rated "The overall image and reputation of El Dorado County" significantly higher than their counterparts who have been in the County for 3 to 5 years and 20 years or more. The ratings of "The overall quality of new development in El Dorado County" were significantly higher among the respondents who have lived in the County for 19 years or less than among those who have been in the County for 20 years or more. Finally, the respondents who have lived in the County for 3 to 5 years are significantly more satisfied with "The rate of population growth in El Dorado County" than the respondents who have lived in the County 20 years or more.

Homeownership Status

The results indicate that the homeowners are significantly more satisfied than the renters with "The rate of population growth in El Dorado County." This results parallels the findings of Question 6, in which significantly more of the renters mentioned that "Regulating growth" is the most important issue facing the County.

Lower Rated Qualities of the County
Differences in Demographic Groups

GODBE RESEARCH

	Age				Gender	
	18 to 29	30 to 39	50 to 64	65 and over	Male	Female
El Dorado County as a place to retire	3.43	3.01	3.44	3.66	3.34	3.44
The overall image and reputation of El Dorado County	3.28	3.40	3.30	3.39	3.24	3.44
El Dorado County as a place to work	2.89	3.01	3.06	3.09	2.92	3.11

The discussion below continues to highlight the significant differences that were observed between key demographic groups in three of the qualities of the County that were rated relatively lower.

Age

The satisfaction ratings of the respondents age 30 to 39 years are significantly lower than the respondents age 18 to 29 years and age 50 years and over for "El Dorado County as a place to retire."

Gender

The women who participated in the study are significantly more satisfied with "The overall image and reputation of El Dorado County" and "El Dorado County as a place to work" than the men.

The next section of the survey assessed residents' overall satisfaction with El Dorado County services. To clarify any confusion regarding County services, the respondents were first read, *"Next, I would like to ask you some questions regarding the services provided by El Dorado County, which are not to be confused with the services provided by the Cities of Placerville and South Lake Tahoe, community service districts or other special districts. County services include those provided by the Sheriff, County parks, County library, and a range of County health and social services."*

Approximately 79 percent of the respondents stated that they are at least "Somewhat satisfied" with the overall job El Dorado County is doing to provide County services. More specifically, 36 percent reported "Very satisfied" and 43 percent reported "Somewhat satisfied." In contrast, 11 percent of the respondents reported that they are "Somewhat dissatisfied" and 5 percent reported that they are "Very dissatisfied."

	Gender	
	Male	**Female**
Very satisfied	31.8%	40.8%
Somewhat satisfied	47.0%	38.5%
Somewhat dissatisfied	10.4%	12.3%
Very dissatisfied	7.0%	2.6%
DK/NA	3.8%	5.8%

The discussion below highlights the significant differences that were observed between male and female respondents in their satisfaction ratings of the overall job El Dorado County is doing to provide County services. No additional differences were observed between the key demographic and behavioral subgroups in the responses to this question.

Gender

Significantly more of the women than the men reported that they are "Very satisfied" with the County's overall job in providing services. In contrast, significantly more of the men than the women reported that they are "Somewhat satisfied" or "Very dissatisfied" with the overall job of the County.

Satisfaction with County Services I

GODBE RESEARCH
Gain Insight

9. I'm going to read you a list of County services. For each, please tell me whether you are generally satisfied or dissatisfied with the County's performance in this area.

Service	Score
Ambulance services	3.5
County park facilities	3.4
Snow removal services	3.3
Public library services	3.3
Agricultural Department services	3.3
Sheriff Department services	3.3

1.0 Very Dissatisfied — 2.0 Somewhat Dissatisfied — 3.0 Somewhat Satisfied — 4.0 Very Satisfied

Respondents next were presented with a list of 19 specific County services, and they were asked to rate their satisfaction with each of these services. The responses to these questions were coded such that mean scores could be calculated: "Very satisfied" = 4.0, "Somewhat satisfied" = 3.0, "Somewhat dissatisfied" = 2.0, "Very dissatisfied" = 1.0, and the respondents who reported "DK/NA" were eliminated from this analysis. To facilitate the presentation of these results, the responses to this list of services are continued in the two charts that follow. Shown above are the six services that received relatively higher satisfaction ratings.

Of the 19 services tested, the respondents reported being the most satisfied with "Ambulance services" (mean score = 3.5). This mean score indicates that, on average, the residents of El Dorado County are between "Somewhat satisfied" and "Very satisfied" with this County service. "County park facilities such as Pioneer Park, Henningsen Lotus Park, and Bradford Park" also received high satisfaction ratings, with a mean score of 3.4.

To put these mean scores into perspective the percent breakdown of the top-rated service "Ambulance services" was 48 percent "Very satisfied," 24 percent "Somewhat satisfied," 3 percent "Somewhat dissatisfied," 2 percent "Very dissatisfied," and 24 percent "DK/NA." In contrast, when asked about "Improving traffic flow" (shown in the chart on a following page), 12 percent of the respondents reported that they are "Very satisfied," 31 percent reported "Somewhat satisfied," 27 percent "Somewhat dissatisfied," 26 percent "Very dissatisfied," and 5 percent "DK/NA."

Satisfaction with County Services II

GODBE RESEARCH
Gain Insight

9. I'm going to read you a list of County services. For each, please tell me whether you are generally satisfied or dissatisfied with the County's performance in this area.

Service	Rating
Services for seniors	3.2
Maintaining clean air quality	3.2
Public health services	3.2
Public information services	3.1
Animal control services	3.1
Services for Veterans	3.0
Child support services	3.0

1.0	2.0	3.0	4.0
Very Dissatisfied	Somewhat Dissatisfied	Somewhat Satisfied	Very Satisfied

To continue the analysis of the responses to Question 9, shown in the current chart are the areas which received relatively moderate satisfaction ratings. Specifically, the 19 County services were ordered from the relatively most positive (shown in the previous chart) to the relatively least positive (shown in the chart that follows) satisfaction ratings. These seven areas fell in the middle of this ordering, all with mean scores between 3.2 and 3.0.

To complete the analysis of the responses to Question 9, shown in the current chart are the services which received relatively lower satisfaction ratings. The two County services which received the relatively lowest satisfaction ratings were "Street maintenance and repair" and "Improving traffic flow," with mean scores of 2.5 and 2.3, respectively.

Satisfaction with County Services
Differences in Demographic Groups

GODBE RESEARCH
Gain Insight

	Gender	
	Male	**Female**
County park facilities such as Pioneer Park, Henningsen Lotus Park, and Bradford Park	3.31	3.45

Regarding the two highest rated County services, Ambulance and County parks services, only one difference between the key demographic groups was observed.

Gender

The female respondents are significantly more satisfied than the male respondents with "County park facilities such as Pioneer Park, Henningsen Lotus Park, and Bradford Park."

As an estimate of "derived importance," Godbe Research calculated the correlations between the overall satisfaction ratings of County services (Q8) and the satisfaction ratings of the 19 specific County services (Q9) just discussed. In this context, a relatively high correlation suggests that a respondent's perception of that specific County service drives his/her overall satisfaction with County services; therefore, the service is relatively more important.

The presentation of these derived importance results continues on the following page. Shown in the above chart are the 10 services with relatively higher derived importance scores (i.e., correlations with the overall ratings of County services). The service with the relatively highest score is "Public health services" (0.41). This score indicates that the respondents who are very satisfied with Public health services also tend to be very satisfied with the overall job El Dorado County is doing to provide County services. Further, respondents who are very dissatisfied with Public health services also tend to be very dissatisfied with County services as a whole. The strong association between respondents' satisfaction with Public health services and their overall satisfaction with County services suggests that this service is relatively high in importance. Rounding out the top three services are Sheriff Department services (0.40) and Public information services (0.39).

_____

Correlation coefficients range from "0" to "1" to indicate the strength of association between the two questions correlated. A correlation of "0" means that the residents' satisfaction with a specific service has no bearing at all on their overall satisfaction with the job the County is doing in providing services. On the contrary, a "1" means that the perceptions of a specific service perfectly drives overall satisfaction. We never see "1" in attitudinal research, but instead correlations of 0.4 are generally considered high. In the present context of deriving priorities from survey data for action, it is most important to consider these correlation coefficients, or derived importance scores, in relative *terms. That is, which services are the highest drivers of the residents' overall perceptions regarding the County's performance in providing services and, therefore, might be considered as priorities for improvement or maintenance.*

Derived Importance of County Services II — GODBE RESEARCH Gain Insight

Service	Derived Importance Score
Enforcing quality developments	0.33
Public library services	0.32
County building and planning services	0.31
County park facilities	0.31
Animal control services	0.28
Mental health services	0.28
Improving traffic flow	0.25
Maintaining clean air quality	0.23
Snow removal services	0.17

To complete the analysis of the importance of County services, shown in the current chart are the services with relatively lower derived importance scores. The two County services with the relatively lowest scores are "Maintaining clean air quality" and "Snow removal services," with derived importance scores of 0.23 and 0.17 respectively.

When interpreting these scores, it is important to keep in mind that the results suggest that all of the 19 services tested are important to the residents of El Dorado County; however, certain services are more important than others. A service charted as low in relative importance should not be interpreted as unimportant to residents, but simply as less important than the other services tested.

In the matrix above, the 19 County services are plotted according to their derived importance scores and the respondents' ratings of the quality of these services. Quadrant 1 shows the services that are relatively high in importance but were rated relatively less positively. Thus, the County should consider allocating resources to these services for improvement. Quadrant 2 shows the services that the County should maintain in the future, as these services were relatively high in importance and the satisfaction ratings also were relatively more positive. With respect to Quadrant 3 these services received relatively less positive satisfaction ratings, but these were also relatively lower in importance. It is recommended that these services receive second priority for improvement, following those contained in Quadrant 1. Finally, Quadrant 4 shows the services that received relatively more positive ratings but were relatively lower in importance. As such, these services should be a second priority to maintain, following those contained in Quadrant 2.

First Priority to Improve (Quadrant 1)

- C. Street maintenance and repair
- G. Services for low income residents
- S. Enforcing codes and guidelines for quality and safe developments
- M. Child support services
- O. Services for Veterans

First Priority to Maintain (Quadrant 2)

- Q. Public information services about El Dorado County programs and services
- J. Public health services
- F. Services for seniors
- B. Sheriff Department services
- A. Agricultural Department services
- L. Ambulance services

Second Priority to Improve (Quadrant 3)

- R. Improving traffic flow
- N. County building and planning services
- H. Mental health services

Second Priority to Maintain (Quadrant 4)

- K. Animal control services
- P. Maintaining clean air quality
- I. Public library services
- D. Snow removal services
- E. County park facilities such as Pioneer Park, Henningsen Lotus Park, and Bradford Park

Approximately half of the respondents (53%) reported "Yes," that they, or a member of their household, had interacted with an El Dorado County department or agency for service in the past 12 months, whereas 44 percent of the respondents reported "No," they had not.

Interaction with County Departments
Differences in Demographic Groups

GODBE RESEARCH
Gain Insight

	Age				Gender	
	18 to 29	40 to 49	50 to 64	65 and over	Male	Female
Yes (Interacted with County Department)	53.6%	59.6%	57.8%	35.1%	48.7%	56.8%
No (Did not interact with County Department)	37.3%	39.8%	41.3%	62.1%	48.3%	40.3%
DK/NA	9.1%	0.7%	0.9%	2.9%	3.0%	2.9%

The discussion below highlights the significant differences that were observed between key demographic groups in their reported interaction with County departments.

Age

In general, the younger respondents reported more interaction with County departments. Specifically, significantly more of the respondents age 40 to 64 years replied "Yes," that they had interacted with a department or agency, than those 65 years and over. Further, significantly more of the respondents age 65 years and over reported "No" than their counterparts age 18 to 29 years and age 40 to 64 years.

Gender

The women reported greater interaction with County departments than the men. As shown in the table above, significantly more of the women replied "Yes" than the men, whereas significantly more of the men than the women replied "No."

The 316 respondents who reported that they have interacted with an El Dorado County department or agency for service in the past 12 months then were asked to specify the department or agency. The top mentioned departments were the Sheriff and Development Services, with 27 percent and 25 percent, respectively. Human Services (14%) and Public Health Services (10%) rounded out the top four departments. *(Please note: the above chart does not include the departments and agencies that were mentioned by 2 percent or less of the respondents. For a complete percent breakdown of the responses, see the Topline Report in Appendix B.)*

Interaction with County Departments II
Differences in Demographic Groups

GODBE RESEARCH
Gain Insight

	Area of Residence		Length of Residence			Homeownership Status	
	East Slope	West Slope	2 years or less	11 to 19 years	20 years or more	Own	Rent
Development Services (inc. Building Planning)	37.9%	22.3%	8.5%	34.4%	27.4%	27.8%	15.3%
Social/Community/Human Services	10.3%	14.4%	20.5%	3.3%	18.9%	11.6%	21.6%

Regarding the four County departments and agencies which were mentioned the most frequently, the discussion below highlights the significant differences that were observed between key demographic groups in their reported interaction with Development Services and Social, Community, and Human Services.

Area of Residence

Significantly more of the respondents who reside on the East slope mentioned interacting with Development Services than those who reside on the West slope.

Length of Residence

The respondents who have resided in the County for 11 to 19 years mentioned Development Services significantly more than those who have been in the County 2 years or less. Additionally, the respondents who have lived in the County 20 years or more mentioned Social, Community, and Human Services significantly more than the respondents who have lived in the County for 11 to 19 years.

Homeownership Status

Significantly more of the homeowners than the renters reported interaction with Development Services, whereas significantly more of the renters than the homeowners mentioned interaction with Social, Community, and Human Services.

Of the 316 respondents who reported having interacted with a County department or agency in the previous 12 months, roughly 75 percent were at least "Somewhat satisfied" with the interaction. More specifically, 52 percent of the respondents reported "Very satisfied" and 23 percent reported "Somewhat satisfied." In contrast, 6 percent of the respondents reported that they were "Somewhat dissatisfied" with the interaction and 17 percent reported "Very dissatisfied."

Satisfaction with Interaction
Differences in Demographic and Behavioral Groups

GODBE RESEARCH
Gain Insight

	County Department					Gender	
	Sheriff	Development Services	Human Services	Public Health	Other Services	Male	Female
Very satisfied	47.3%	33.2%	53.2%	75.0%	61.7%	44.9%	57.9%
Somewhat satisfied	18.9%	34.3%	24.8%	14.3%	19.6%	29.7%	17.3%
Somewhat dissatisfied	3.0%	9.8%	5.4%	7.0%	6.2%	4.3%	8.1%
Very dissatisfied	27.7%	22.7%	16.7%	3.7%	9.3%	17.6%	16.2%
DK/NA	3.1%	0.0%	0.0%	0.0%	3.2%	3.4%	0.5%

The discussion below highlights the significant differences that were observed between key demographic and behavioral groups in their satisfaction with their interaction with County departments.

County Department

To better understand residents' opinions of County departments, the respondents who reported interacting with a specific County department in Question 11 were classified according to the department with which they interacted, including the Sheriff, Development Services, Human Services, and Public Health. The respondents who reported interaction with the remaining County departments (e.g., Library, Emergency Services, and Child Support Services) were grouped as "Other Services." Significantly more of the respondents who have interacted with Public Health Services and "Other Services" reported that they were "Very satisfied" than those who have interacted with Development Services. Additionally, significantly more of the respondents who have interacted with the Sheriff reported that they were "Very dissatisfied" than those who have interacted with "Other Services."

Gender

Significantly more of the women than the men reported that they were "Very satisfied," whereas significantly more of the men than the women reported that they were "Somewhat satisfied."

The 237 respondents who reported that they were "Very satisfied" or "Somewhat satisfied" with their interaction with County departments and agencies were asked to name the single most important reason they were satisfied with the interaction. The two most frequently mentioned reasons were "Courtesy/politeness" and "How issue was resolved," with 35 percent and 27 percent of the respondents, respectively.

	County Department					Homeownership Status	
	Sheriff	Development Services	Human Services	Public Health	Other Services	Own	Rent
Courtesy/politeness	35.9%	31.8%	33.4%	48.2%	33.0%	28.6%	52.6%
Time it took to answer question	20.9%	3.1%	9.1%	29.0%	13.3%	16.5%	5.0%

The discussion below highlights the significant differences that were observed between key demographic and behavioral groups in the reasons they were satisfied with their interaction with County departments.

County Department

Significantly more of the respondents who reported interaction with Public Health Services within the past 12 months mentioned that they were satisfied with the interaction due to the "Time it took to answer question" than the respondents who reported interaction with Development Services.

Homeownership Status

A significantly greater percent of the renters reported that their satisfaction was due to "Courtesy/politeness" than the homeowners. In contrast, significantly more of the homeowners reported that their satisfaction was the result of the "Time it took to answer question."

Reason for Satisfaction with Interaction
Differences in Demographic Groups

GODBE RESEARCH
Gain Insight

	Household Income			Gender	
	$25,000 to $50,000	$100,000 to $150,000	$150,000 or more	Male	Female
Courtesy/politeness	54.2%	18.5%	17.2%	41.1%	28.7%
Accuracy of information provided	4.7%	15.0%	31.6%	7.2%	15.5%

The discussion below continues to highlight the significant differences that were observed between key demographic groups in the reasons they were satisfied with their interaction with County departments.

Household Income

The respondents with income from $25,000 to $50,000 mentioned that they were satisfied due to "Courtesy/politeness" significantly more than their counterparts with income from $100,000 to $150,000. Conversely, significantly less of the respondents with income from $25,000 to $50,000 mentioned that they were satisfied because of the "Accuracy of information provided" than the respondents with income of $150,000 or more.

Gender

Significantly more of the men than the women reported that their satisfaction was the result of "Courtesy/politeness," whereas significantly more of the women than the men reported that it was due to the "Accuracy of information provided."

The 73 respondents who reported that they were "Very dissatisfied" or "Somewhat dissatisfied" with their interaction with County departments and agencies were asked to name the single most important reason they were dissatisfied. The two most frequently mentioned reasons were "Lack of courtesy" and "Problem not resolved," with 23 percent and 21 percent of the respondents, respectively. Taken together, the results of Question 13 and 14 suggest that satisfaction with County departments is largely influenced by the courtesy and politeness of County officials and staff and the manner in which the problem is resolved.

Reason for Dissatisfaction with Interaction

The next section of the survey gathered information on El Dorado County residents' preferred source of information. The most frequently mentioned source of information for finding out what is going on in El Dorado County was the Mt. Democrat newspaper (30%), followed by other newspapers (18%) and the El Dorado County website (13%).

Preferred Information Source
Differences in Demographic Groups

GODBE RESEARCH
Gain Insight

	Area of Residence		Homeownership Status	
	East Slope	West Slope	Own	Rent
Mt. Democrat newspaper	8.2%	34.9%	32.1%	23.2%
Other newspaper	41.7%	13.1%	16.3%	24.7%

The discussion below highlights the significant differences that were observed between key demographic groups in two of the three top mentioned sources of information – the Mt. Democrat newspaper and other newspapers.

Area of Residence

Significantly more of the respondents on the West slope than the East slope mentioned that they prefer the Mt. Democrat newspaper for finding out what is going on in El Dorado County. In contrast, significantly more of the respondents who live on the East slope mentioned other newspapers than those who live on the West slope.

Homeownership Status

Significantly more of the homeowners than the renters reported that they prefer the Mt. Democrat newspaper, whereas significantly more of the renters than the homeowners indicated a preference for other newspapers.

The discussion below highlights the significant differences that were observed between key demographic groups in three of the top mentioned sources of information – the Mt. Democrat newspaper, other newspapers, and the El Dorado County website.

Age

Significantly more of the respondents age 50 years and over mentioned the Mt. Democrat newspaper than the respondents age 18 to 29 years.

Household Income

The respondents with income from $50,000 to $100,000 showed a greater preference for the Mt. Democrat newspaper than those with income of $150,000 or more. Additionally, the respondents with income of $150,000 or more mentioned preferring the El Dorado County website significantly more than their counterparts with income under $50,000.

Gender

Significantly more of the women than the men stated that they prefer other newspapers for finding out what is going on in the County.

Approximately half of the respondents (54%) reported "No," that they are not aware of the fact that *www.co.el-dorado.ca.us* is the official website of the County government. In contrast, 45 percent of the respondents reported "Yes."

Awareness of the County Website
Differences in Demographic Groups

	Homeownership Status

The discussion below continues to highlight the significant differences that were observed between demographic groups in their awareness of the address of the official County website.

Age

Significantly more of the respondents age 30 to 49 years stated "Yes," that they were aware of the official County website than the respondents age 65 years and over.

Household Income

Significantly more of the respondents with income of $50,000 or more are aware of the official County website than the respondents with income under $25,000. In contrast, significantly more of the respondents with income under $25,000 reported "No," that they did not know this website, than the respondents with income of $100,000 or more.

Gender

Significantly more of the women than the men are aware of the official County website, whereas significantly more of the men than the women are unaware of the website.

The respondents next were asked how frequently they have visited the official County website in the last 12 months. Over half of the respondents (58%) reported that they have never visited the County website. However, roughly 1 in 5 respondents indicated that they have visited the website once every few months (19%).

The discussion below highlights the significant difference that was observed between areas of residence in their use of the official County website.

Area of Residence

Significantly more of the respondents who reside on the West slope than the East slope mentioned that they have visited the County website "Once."

Very uninformative	2.8%	0.0%	2.5%	0.7%
DK/NA	1.0%	1.7%	2.1%	1.6%

The discussion below highlights the significant differences that were observed between key demographic groups in their opinion of the County website.

Household Income

A significantly greater percent of the respondents with income from $100,000 to $150,000 rated the website as "Somewhat informative" than their counterparts with income from $50,000 to $100,000.

Gender

Significantly more of the women than the men reported that they find the County website "Very informative."

The present study had four main objectives: (1) assess residents' overall opinion of the quality of life in El Dorado County, as well as the features that residents like most and least, about living in the County; (2) assess residents' satisfaction with a variety of services provided by El Dorado County and analyze the relative importance of these services; (3) survey residents' interactions with County departments and agencies, and the factors that influence satisfaction with these interactions; and (4) survey a variety of behavioral and demographic characteristics of El Dorado County residents, including working status, preferred information source, and voter registration.

The results indicate that El Dorado County residents, on average, have a positive opinion of the quality of life in the County. When asked about the direction of the County, a majority of the residents indicated that things either are moving in the "Right direction" (39%) or are at least "Staying the same" (28%). Further, approximately 88 percent of the surveyed residents report being at least somewhat satisfied with the overall quality of life in El Dorado County.

The natural environment and rural atmosphere were at the top of the list of most liked features of living in El Dorado County. In contrast, residents least like the traffic congestion and growth. Although residents mentioned enjoying the rural atmosphere, it also appears to be a quality of the County that can present challenges at times. Specifically, many residents also mentioned that they do not like the isolation of living in El Dorado County, which includes a lack of professional and health services, as well as local shopping and restaurants, in some areas.

In addition to expressing satisfaction with the overall quality of life, residents also indicated that they are satisfied with a number of specific qualities of El Dorado County. Of the ten qualities tested, residents expressed the greatest satisfaction with the safety and quality of their local neighborhoods. From this list, residents are least satisfied with the quality of new development and the rate of population growth.

Conclusions II

GODBE RESEARCH
Gain Insight

➢ **Residents are also satisfied with El Dorado County services:**
- 8 out of 10 residents are satisfied with the overall job the County is doing to provide services.
- Residents are most satisfied with Ambulance services and County park facilities, and least satisfied with street maintenance/repair and services to improve traffic flow.

➢ **Maintain the following important services with high resident satisfaction:**
- Public information services about County programs and services
- Public health services
- Services for seniors
- Sheriff Department services
- Agricultural Department services
- Ambulance services

In addition to indicating satisfaction with the overall quality of life in the County, the results also indicate that residents are satisfied with El Dorado County services. Specifically, approximately 8 out of 10 residents are satisfied with the overall job the County is doing to provide services. When asked about 19 specific County services, residents expressed the greatest satisfaction with Ambulance services and County park facilities. On the other hand, residents expressed the least relative satisfaction with street maintenance and repair and services to improve traffic flow.

In order to help El Dorado County prioritize actions vis-à-vis maintaining or improving County services, correlation analyses were conducted between the satisfaction ratings of the overall job El Dorado County is doing to provide County services (Q8) and the 19 specific County services (Q9). The results of these analyses show, relatively speaking, which services have the greatest influence on residents' overall perceptions of the County's performance.

Specifically, the results indicate that residents are satisfied with six important County services, and that the County should consider prioritizing these six services for maintenance: public information services about El Dorado County programs and services; Public health services; services for seniors; Sheriff department services; Agricultural Department services; and ambulance services.

Conclusions III

GODBE RESEARCH
Gain Insight

> **Consider prioritizing the following important services with lower resident satisfaction ratings for *improvement*:**
>   - Street maintenance and repair
>   - Services for low income residents
>   - Enforcing codes and guidelines for quality and safe developments
>   - Child support services
>   - Services for Veterans

Further, El Dorado County should consider prioritizing the following areas for improvement since they were most important (i.e., highest influence on the residents' overall satisfaction with County services) and were rated lowest in resident satisfaction: street maintenance and repair; services for low income residents; enforcing codes and guidelines for quality and safe developments; child support services; and services for veterans.

Again, when interpreting the Priorities for Action Matrix included in this report, it is important to keep in mind that the matrix plots the County services based on their relative derived importance and relative satisfaction ratings. The results suggest that all of the 19 services tested are important to the residents of El Dorado County; however, certain services are more important than others. A service charted as low in relative importance should not be interpreted as unimportant to residents, but simply as less important than the other services tested.

Last, but not least, it is also important to consider these data-driven priorities within the larger context of the mission and the strategic directions of the County. For instance, the analysis shows that improving traffic flow is not as important as County building and planning services in driving public perceptions regarding the overall job El Dorado County is doing in serving its residents. However, there may be other conditions, not factored in by the empirical data, that require El Dorado County to focus priority attention on improving traffic flow.

Conclusions IV

➢ **53 percent of the residents have interacted with a County department in the past 12 months:**

- Sheriff, Development Services, Human Services, and Public Health Services were the most frequently mentioned.
- Approximately 75% of residents were satisfied with their interaction.
- Courtesy of department staff and the manner in which an issue is resolved largely influence the satisfaction of interactions.

Approximately half of the residents (53%) have interacted with a County department in the past 12 months. At the top of this list of departments were the Sheriff, Development Services, Human Services, and Public Health Services. When asked to rate the quality of their interaction with a County department, approximately 75 percent of residents reported that they were satisfied with the interaction. Further, 52 percent reported that they were "Very satisfied."

To better understand residents' perceptions of interacting with County departments, they were asked to name the single most important reason they were satisfied or dissatisfied. The results of these two questions yielded highly consistent results. At the top of both lists were the courtesy and politeness of department staff, as well as the manner and timeliness in which an issue was resolved. Thus, these two qualities largely influence residents' satisfaction with interacting with the County government.

The survey also gathered demographic and behavioral information on residents, including their working status and their preferred source of information. The study revealed that a majority of the adult residents (60%) of El Dorado County are employed. Further, of these employed residents, approximately 67 percent work within the County and 63 percent would consider working for a similar company, if one were to relocate to the County. The most frequently mentioned types of work included professional work, construction/craftsmanship, and services of a personal or business nature.

A final group of substantive questions were intended to help the County with its marketing efforts by identifying where residents prefer to get information. The top three cited sources for finding out what is going on in El Dorado County were the Mt. Democrat newspaper, other newspapers and the El Dorado County website.

Although slightly more than 1 out of 10 of the surveyed residents (13%) said that the El Dorado County website is their preferred information source, some 54 percent were unaware that www.co.el-dorado.ca.us is the official website. Additionally, approximately 58 percent of the residents have never visited the website. Of the residents who have visited this official website, approximately 89 percent indicated that they found it informative. These results suggest that there is great opportunity for El Dorado County government to inform residents of its official website, which should increase usage and, in turn, its importance as an information source to County residents.

Margin of Error for Overall Sample (n = 600)

Because a survey typically involves a limited number of people who are part of a larger population, by mere chance alone there will almost always be some differences between a sample and the population from which it was drawn.

These differences are known as "sampling error" and they are expected to occur regardless of how scientifically the sample has been selected. The advantage of a scientific sample is that we are able to calculate the sampling error. Sampling error is determined by four factors: the population size, the sample size, a confidence level, and the dispersion of responses.

The table above shows the possible sampling variation that applies to a percent result reported from a probability type sample. Because the sample of 600 respondents was drawn from the estimated population of approximately 135,502 adult residents of El Dorado County, one can be 95 percent confident that the margin of error due to sampling will not vary, plus or minus, by more than the indicated number of percent points from the result that would have been obtained if the interviews had been conducted with all persons in the universe. As the table indicates, the maximum margin of error for all aggregate responses is between 2.4 and 4.0 percent for the survey.

This means that, for a given question with dichotomous response options (e.g., Yes/No) answered by all 600 respondents, one can be 95 percent confident that the difference between the percent breakdowns of the sample and those of the population is no greater than 4.0 percent. The percent margin of error applies to both sides of the answer, so that for a question in which 50 percent of respondents said yes, one can be 95 percent confident that the actual percent of the population that would say yes is between 46 (50 minus 4.0) percent and 54 (50 plus 4.0) percent.

Appendix A: Methodology
Margin or Error for Overall Sample (n = 600)

GODBE RESEARCH
Gain Insight

n	Distribution of Responses				
	90% / 10%	80% / 20%	70% / 30%	60% / 40%	50% / 50%
1100	1.8%	2.4%	2.7%	2.9%	2.9%
1000	1.9%	2.5%	2.8%	3.0%	3.1%
900	2.0%	2.6%	3.0%	3.2%	3.3%
800	2.1%	2.8%	3.2%	3.4%	3.5%
700	2.2%	3.0%	3.4%	3.6%	3.7%
600	2.4%	3.2%	3.7%	3.9%	4.0%
500	2.6%	3.5%	4.0%	4.3%	4.4%
400	2.9%	3.9%	4.5%	4.8%	4.9%
300	3.4%	4.5%	5.2%	5.5%	5.7%
200	4.2%	5.5%	6.3%	6.8%	6.9%
100	5.9%	7.8%	9.0%	9.6%	9.8%

The margin of error for a given question also depends on the distribution of responses to the question. The 4.0 percent refers to dichotomous questions where opinions are evenly split in the sample with 50 percent of respondents saying yes and 50 percent saying no. If that same question were to receive a response in which 10 percent of the respondents say yes and 90 percent say no, then the margin of error would be no greater than 2.4 percent. As the number of respondents in a particular subgroup (e.g., age) is smaller than the number of total respondents, the margin of error associated with estimating a given subgroup's response will be higher. Due to the high margin of error, Godbe Research cautions against generalizing the results for subgroups that are composed of 25 or fewer respondents.

Appendix A: Methodology
Crosstabulation Tables

GODBE RESEARCH
Gain Insight

		Area of Residence		
		Total	East Slope	West Slope

		39.0%	28.3%	41.3%
	Staying the same	166	39	127
		27.6%	36.2%	25.8%
	Wrong direction	149	27	122
		24.9%	25.4%	24.7%
	DK/NA	51	11	40
		8.5%	10.2%	8.2%

How to Read Crosstabulation Tables

The questions discussed and analyzed in this report comprise a subset of various crosstabulation tables available for each question. Only those subgroups that are of particular interest or that illustrate particular insights are included in the discussion. Should readers wish to conduct a closer analysis of subgroups for a given question, the complete breakdowns appear in Appendix C. These crosstabulation tables provide detailed information on the responses to each question by demographic and behavioral groups that were assessed in the survey. A typical crosstabulation table is pictured above.

A short description of the item appears on the left-hand side of the table. The sample size (in this case n = 600) is presented in the first column of data under "Total." The results to each possible answer choice of all respondents are presented in the first column of data under "Total." The aggregate number of respondents in each answer category is presented as a whole number, and the percent of the entire sample that this number represents is just below the whole number. For example, among the total respondents, 234 stated that things in the County are gong in the "Right direction" and this number of respondents equals 39 percent of the total sample size of 600. Next to the "Total" column are other columns representing responses from East slope and West slope respondents. The data from these columns are read in exactly the same fashion as the data in the "Total" column, although each group makes up a smaller percent of the entire sample.

Appendix A: Methodology
Subgroup Comparisons

GODBE RESEARCH
Gain Insight

1. Overall, do you believe that things in El Dorado County are going in the right direction, wrong direction or staying the same?		Area of Residence				Area of Residence	
		Total	East Slope	West Slope		East Slope	West Slope
	Total	600	108	492		(A)	(B)
	Right direction	234 / 39.0%	30 / 28.3%	203 / 41.3%	Right direction		A
	Staying the same	166 / 27.6%	39 / 36.2%	127 / 25.8%	Staying the same	B	
	Wrong direction	149 / 24.9%	27 / 25.4%	122 / 24.7%	Wrong direction		
	DK/NA	51 / 8.5%	11 / 10.2%	40 / 8.2%	DK/NA		

Subgroup Comparisons

To test whether or not the differences found in percent results among subgroups are likely due to actual differences in opinions or behaviors – rather than the results of chance due to the random nature of the sampling design – a "z-test" was performed. In the headings of each column are labels, "A," "B," "C," etc. along with a description of the variable. The "z-test" is performed by comparing the percent in each cell with all other cells in the same row within a given variable (within gender in the pictured table, for example).

The results from the "z-test" are displayed in a separate table adjacent to the crosstabulation table. If the percent in one cell is statistically different from the percent in another, the column label will be displayed in the cell from which it varies significantly. For instance, in the table above, a significantly higher percent of West slope respondents (41%) mentioned that things are going in the "Right direction" than the percent of East slope respondents (28%); therefore, the letter "A," which stands for the East slope respondents appears under Column "B," which stands for the West slope respondents. The letters in the table indicate the differences where one can be 95 percent confident that the results are due to actual differences in opinions or behaviors reported by subgroups of respondents.

It is important to note that the percent difference among subgroups is just one piece in the equation to determine whether or not two percents are significantly different from each other. The variance associated with each data point is integral to determining significance. Therefore, two calculations may be different from each other according to the percent reported, yet the difference may not be statistically significant according to the "z" statistic.

Appendix A: Methodology
Means

Question	Measure	Scale	Values
Q2, Q7, Q8, Q9, and Q12	Satisfaction Ratings	1 to 4	4.0 = "Very satisfied" 3.0 = "Somewhat satisfied" 2.0 = "Somewhat dissatisfied" 1.0 = "Very dissatisfied"
Q18	Informative Ratings	1 to 4	4.0 = "Very informative" 3.0 = "Somewhat informative" 2.0 = "Somewhat uninformative" 1.0 = "Very uninformative"

Understanding a "Mean"

In addition to the analysis of the percent of the responses, many results will be discussed with respect to a descriptive "mean." Means are the arithmetic averages of responses. To derive respondents' overall perception of the importance of a given issue, Q2 for example, a number value is first assigned to each response category (in this case, "Very satisfied" = 4.0, "Somewhat satisfied" = 3.0, "Somewhat dissatisfied" = 2.0, and "Very dissatisfied" = 1.0). The individual answer of each respondent is then assigned the corresponding number – from 4.0 to 1.0 in this example. Finally, all respondents' answers are averaged to produce a final score that reflects overall importance. The resulting mean makes the interpretation of the data considerably easier.

In the Crosstabulation tables, as well as in some tables and charts throughout the presentation, for Questions 2, 7, 8, 9, 12, and 18 of the survey, the reader will find mean scores. These mean scores represent the overall response of each group. The table above shows the scales for each corresponding question. Responses of "DK/NA" were not included in the calculations of the means for any question.

Appendix A: Methodology
Means Table

	Area of Residence		
	Total	East Slope	West Slope
7A. The overall image and reputation of El Dorado County	3.34	3.20	3.37
7B. The overall quality of your local neighborhood	3.59	3.44	3.62
7C. El Dorado County as a place to raise children	3.54	3.07	3.65
7D. El Dorado County as a place to work	3.01	2.67	3.09
7E. El Dorado County as a place to retire	3.39	3.18	3.43
7F. The overall quality of new development in El Dorado County	2.63	2.56	2.64
7G. The rate of population growth in El Dorado County	2.50	2.67	2.47
7H. The overall safety in El Dorado County	3.46	3.50	3.45
7I. The safety of walking alone in your neighborhood at night	3.46	3.48	3.46
7J. The safety of walking alone in your neighborhood during the day	3.78	3.79	3.77

Only those subgroups that are of particular interest, or that illustrate a particular insight, are included in the discussion within the report with regard to mean scores. A typical crosstabulation table of mean scores is shown in the above table.

The aggregate mean score for each item in the question series is presented in the first column of the data under "Total." For example, among all the survey respondents, the quality 7C. "El Dorado County as a place to raise children" earned a mean score of 3.54. Next to the "Total" column are other columns representing the mean scores assigned by the respondents grouped by their area of residence. The data from these columns are read in the same fashion as the data in the "Total" column.

To test whether two mean scores are statistically different, a "t-test" is performed. As in the case of the "z-test" for percents, a statistically significant result is indicated by the letter representing the data column.

Topline Report

The following appendix displays the Topline report, which summarizes the data for the study. For all of the questions in the survey, the Topline report presents the percent of the total respondents who stated each response alternative (unless a skip pattern is indicated). For example, if 50 percent is next to the "Yes" response option for a question, then about 300 of the 600 respondents indicated a "Yes" answer to that question.

EL DORADO COUNTY RESIDENT SATISFACTION SURVEY
Topline Report
April 25, 2007
(n = 600)

CONVENTIONAL ROUNDING RULES APPLY TO THE PERCENTAGES ON THE FOLLOWING PAGES (.05 OR ABOVE IS ROUNDED UP, AND .04 OR BELOW IS ROUNDED DOWN). AS A RESULT, THE PERCENTAGES MAY NOT ADD UP TO 100 PERCENT.

FURTHER, A NUMBER OF QUESTIONS PERMITTED THE RESPONDENTS TO MAKE MORE THAN ONE RESPONSE (E.G., QUESTION K). FOR THESE MULTIPLE-RESPONSE FORMAT QUESTIONS, THE PERCENTAGES REFER TO THE PROPORTION OF RESPONSENTS WHO MADE THAT RESPONSE AND OFTEN ADD UP TO OVER 100 PERCENT.

OVERALL PERCEPTIONS AND QUALITY OF LIFE

1. Overall, do you believe that things in El Dorado County are going in the right direction, wrong direction or staying the same?

Right direction	39.0%
Staying the same	27.6%

SATISFACTION WITH COUNTY SERVICES

8. Next, I would like to ask you some questions regarding the services provided by El Dorado County, which are not to be confused with the services provided by the Cities of Placerville and South Lake Tahoe, community service districts or other special districts. County services include those provided by the Sheriff, County parks, County library, and a range of County health and social services.

    Generally speaking, are you satisfied or dissatisfied with the overall job El Dorado County is doing to provide County services? [GET ANSWER, THEN ASK]: Is that very [satisfied/dissatisfied] or somewhat [satisfied/dissatisfied]?

Very satisfied	36.2%
Somewhat satisfied	42.8%
Somewhat dissatisfied	11.4%
Very dissatisfied	4.8%
DK/NA	4.8%

9. I'm going to read you a list of County services. For each, please tell me whether you are generally satisfied or dissatisfied with the County's performance in this area.

    Here is the first/next [READ FROM LIST BELOW]: _____. Are you satisfied or dissatisfied with the County's performance in this area? [GET ANSWER, THEN ASK]: Is that very [satisfied/dissatisfied] or somewhat [satisfied/dissatisfied]?

	Very satisfied	**Somewhat satisfied**	**Somewhat dissatisfied**	**Very dissatisfied**	**DK/NA**
9A. Agricultural Department services	27.2%	25.5%	3.4%	2.6%	41.3%

9R. Improving traffic flow	12.2%	30.6%	26.6%	26.0%	4.5%
9S. Enforcing codes and guidelines for quality and safe developments	21.6%	43.8%	10.0%	10.8%	13.8%

IMPORTANCE OF COUNTY SERVICES

In order to gauge the "derived importance" of El Dorado County services, Godbe Research calculated the correlation between the overall quality of life ratings (Q2) and the satisfaction ratings of each of the 19 County services tested in Question 9. In this context, a high correlation indicates that a respondent's perception of that specific area drives his/her perception of their overall quality of life in El Dorado County, and, therefore, the area is relatively more important. As an additional measure of the derived importance of these services, the correlation between the satisfaction ratings of the overall County services (Q8) and the satisfaction ratings of each specific County service (Q9) also was calculated.[*]

	Derived Importance based on:	
	Quality of Life (Q2)	Overall Satisfaction with County Services (Q8)
9A. Agricultural Department services	.32	.35
9B. Sheriff Department services	.28	.40
9C. Street maintenance and repair	.22	.34
9D. Snow removal services	.28	.17
9E. County park facilities such as Pioneer Park, Henningsen Lotus Park, and Bradford Park	.24	.31
9F. Services for seniors	.34	.38
9G. Services for low-income residents	.29	.35
9H. Mental health services	.16	.28
9I. Public library services	.22	.32
9J. Public health services	.27	.41
9K. Animal control services	.20	.28
9L. Ambulance services	.24	.35
9M. Child support services	.21	.34
9N. County building and planning services	.22	.31
9O. Services for Veterans	.28	.35
9P. Maintaining clean air quality	.17	.23
9Q. Public information services about El Dorado County programs and services	.22	.39
9R. Improving traffic flow	.16	.25
9S. Enforcing codes and guidelines for quality and safe developments	.26	.33

---

[*] All of the above correlations are statistically significant at the 95 percent confidence level.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions[a,b]

3. What one thing do you like most about living in El Dorado County?		Age				
		18 to 29 (A)	30 to 39 (B)	40 to 49 (C)	50 to 64 (D)	65 and over (E)
	Sense of community					
	Natural environment					
	Rural atmosphere			A	A B	A B
	Outdoor activities					
	Climate					
	High quality of life					
	Other		D			
	DK/NA					

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	Other		
	DK/NA		

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	DK/NA		

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions[b,c]

		Length of Residence				
		2 years or less (A)	3 to 5 years (B)	6 to 10 years (C)	11 to 19 years (D)	20 years or more (E)
7J. The safety of walking alone in your neighborhood during the day	Very dissatisfied Somewhat dissatisfied Somewhat satisfied Very satisfied DK/NA	.[a]	.[a]		.[a]	

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

7J. The safety of walking alone in your neighborhood during the day	Very dissatisfied	.[a]	
	Somewhat dissatisfied		
	Somewhat satisfied		
	Very satisfied		
	DK/NA	.[a]	

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	DK/NA		

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

Comparisons of Column Proportions[b,c]

		Work in the County	
		Yes (A)	No (B)
7J. The safety of walking alone in your neighborhood during the day	Very dissatisfied		
	Somewhat dissatisfied		
	Somewhat satisfied		
	Very satisfied		
	DK/NA		.a

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	Somewhat dissatisfied	.a	.a	
	Somewhat satisfied			
	Very satisfied			
	DK/NA	.a		

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	Very satisfied					
	DK/NA	.a		.a		

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

		High School or less	Some college	College graduate	Graduate school
		(A)	(B)	(C)	(D)
7J. The safety of walking alone in your neighborhood during the day	Very dissatisfied Somewhat dissatisfied Somewhat satisfied Very satisfied DK/NA				

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	Very satisfied					
	DK/NA				.a	

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

8. Generally speaking, are you satisfied or dissatisfied with the overall job El Dorado County is doing to provide County services?		

Results are based on two-sided tests assuming equal variances with significance level 0.05. For each significant pair, the key of the smaller category appears under the category with larger mean.
   a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
   b. Cell counts in some subtables are not integers. They were rounded to the nearest integers before performing pairwise comparisons.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions[b,c]

Service	Category	2 years or less (A)	3 to 5 years (B)	6 to 10 years (C)	11 to 19 years (D)	20 years or more (E)
9S. Enforcing codes and guidelines for quality and safe developments	Very dissatisfied					C
	Somewhat dissatisfied					
	Somewhat satisfied					
	Very satisfied			E		
	DK/NA					

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions[a,b]

		Direction of County		
		Right direction (A)	Staying the same (B)	Wrong direction (C)
9S. Enforcing codes and guidelines for quality and safe developments	Very dissatisfied		A	A B
	Somewhat dissatisfied			A B
	Somewhat satisfied		C	
	Very satisfied	B C		
	DK/NA			

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

DK/NA		A

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	Very satisfied		
	DK/NA		A

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

		Internet Access	
		Yes (A)	No (B)
9S. Enforcing codes and guidelines for quality and safe developments	Very dissatisfied Somewhat dissatisfied Somewhat satisfied Very satisfied DK/NA	B	

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	Very satisfied					
	DK/NA					A B

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

		(A)	(B)	(C)	(D)
9S. Enforcing codes and guidelines for quality and safe developments	Very dissatisfied Somewhat dissatisfied Somewhat satisfied Very satisfied DK/NA	B		B	A

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

		Ethnicity	
		Caucasian (A)	Other (B)
9S. Enforcing codes and guidelines for quality and safe developments	Very dissatisfied		
	Somewhat dissatisfied		
	Somewhat satisfied		
	Very satisfied		
	DK/NA	B	

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions[b,c]

		Household Income				
		Under $25,000	$25,000 to $50,000	$50,000 to $100,000	$100,000 to $150,000	$150,000 or more
		(A)	(B)	(C)	(D)	(E)
9S. Enforcing codes and guidelines for quality and safe developments	Very dissatisfied Somewhat dissatisfied Somewhat satisfied Very satisfied DK/NA					

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

9R. Improving traffic flow		
9S. Enforcing codes and guidelines for quality and safe developments		

Results are based on two-sided tests assuming equal variances with significance level 0.05. For each significant pair, the key of the smaller category appears under the category with larger mean.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts in some subtables are not integers. They were rounded to the nearest integers before performing pairwise comparisons.

9P. Maintaining clean air quality		
9Q. Public information services about El Dorado County programs and services		A
9R. Improving traffic flow		
9S. Enforcing codes and guidelines for quality and safe developments		

Results are based on two-sided tests assuming equal variances with significance level 0.05. For each significant pair, the key of the smaller category appears under the category with larger mean.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts in some subtables are not integers. They were rounded to the nearest integers before performing pairwise comparisons.

Comparisons of Column Proportions[a,b]

		Respondent's Gender	
		Male	Female
		(A)	(B)
10. In the past 12 months, have you, or any member of your household, interacted with an El Dorado County department or agency for service?	Yes		A
	No	B	
	DK/NA		

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	Emergency Services (inc. Fire and Ambulance)		
	Other		
	DK/NA		

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

  a. This category is not used in comparisons because its column proportion is equal to zero or one.

  b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

  c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	Other		
	DK/NA		

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

  a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

  b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

	No	D E	D			
	99			.a		.a

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

DK/NA	a	

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests assuming equal variances with significance level 0.05. For each significant pair, the key of the smaller category appears under the category with larger mean.
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
b. Cell counts in some subtables are not integers. They were rounded to the nearest integers before performing pairwise comparisons.

		Employment Status Employed
		(A)
F. Do you work within El Dorado County?	Yes	.
	No	.
	DK/NA	.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

 a. *Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.*

 b. *Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.*

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

DK/NA					a

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one.

b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Appendix D

GODBE RESEARCH
Gain Insight

Questionnaire

The following appendix contains the questionnaire that was used in the study, including questions and response alternatives.

2007 ELDORADO COUNTY RESIDENT SATISFACTION SURVEY

Hello, my name is _____ and I'm calling on behalf of GRA, a public opinion research firm. We're conducting a survey concerning some important issues for residents in your area, and we would like to get your opinion. It should just take a few minutes of your time.

[IF NEEDED]: I can assure you that I am not trying to sell you anything – this is a research study about local issues and your opinion is extremely valuable.

[IF NEEDED]: To avoid biasing the survey results, I cannot give you specifics about the survey right now, but the topic will become clear after the first few questions.

For statistical reasons, I would like to speak to the youngest male currently at home that is at least 18 years of age. [OR YOUNGEST FEMAL DEPENDING ON THE STATISTICS OF PREVIOUSLY COMPLETED INTERVIEWS.]

[IF THERE IS NO MALE AT LEAST 18 AVAILABLE, THEN ASK:]

OK, then I'd like to speak to the youngest adult female currently at home that is at least 18 years of age.

[IF THERE IS NO MALE/FEMALE AT LEAST 18 AVAILABLE, THEN ASK FOR CALLBACK TIME]

[IF THE INDIVIDUAL SAYS THEY ARE ON THE NATIONAL DO NOT CALL LIST, RESPOND BASED ON THE GUIDELINES FROM THE MARKETING RESEARCH ASSOCIATION. FOR EXAMPLE, IF THE INDIVIDUAL SAYS: "There's a law that says you can't call me," RESPOND WITH: "Most types of opinion and marketing research studies are exempt under the law that was recently approved. That law was approved to regulate the activities of the telemarketing industry. This is a legitimate research call. Your opinions count!"]
