Supervisors:

As public servants you are charged with doing what is in the best interest of your constituents. You are representatives of the people who elected you to serve. This project was met with great opposition and huge concerns by many citizens including area residents and families with students at Oakridge. The Planning Commission rejected this project as they should have in good faith. I implore you to vote no to Verizon's appeal. Put people first before the almighty dollar signs.

7 Reasons why 5G is a threat to overall health

02/05/2020 / By Isabelle Z.

This article was printed from: <https://www.cancer.news/2020-02-05-why-5g-is-a-threat-to-overall-health.html>

Telecommunication companies are painting a rosy picture of 5G, boasting that the new technology will provide us with nearly instant data transfers, faster speeds and greater connectivity. However, as 5G makes its way to cities across the planet, concerns are growing about the effects it could have on our health. Here is a look at 7 ways that it is putting us in danger.

1. It can cause health problems like fertility damage and premature aging.

Research by EMF and wireless radiation scientist Dr. Martin Pall has shown that EMFs not only cause premature aging but also problems like fertility, brain, heart and DNA damage. EMFs can activate the body's voltage-gated calcium channels, causing them to release extra calcium ions into the cell. This spurs the creation of peroxynitrite and free radicals, putting our health in danger. Dr. Pall has even stated that "5G rollout is absolutely insane."

2. It can harm your skin and sweat ducts.

The frequencies used and broadcasted by the 5G network affect our sweat ducts, which are essentially transformed into antennae. It's quite scary to think that our skin, which is our largest organ, can actually be manipulated by 5G. What effects could this have in the long term?

3. It promotes deep EMF penetration.

EMF penetration is what makes cell phones especially risky to children compared to adults, along with the fact that the absorption of radiation accumulates throughout our lifetime and children generally have more years ahead of them than adults. Unfortunately, 5G promotes deep EMF penetration, putting people of all ages at risk.

4. It causes mitochondrial damage and may be carcinogenic.
