Inter-rater
Reliability

Highlights

The Noble IRR site is a completely turn-key solution, with no complicated set-up process and no on-site requirements beyond internet access.

Reduce training costs by focusing training on the areas that staff struggle with, rather than teaching them what they are proven to know.

Start making training something that staff look forward to. Trainers can finally use data to discover where staff struggle and tailor training to address just those areas. No more sitting through eight hours of training to get to the two hours people really need.

The Noble IRR Site

Noble provides another industry first: the ability to objectively measure both inter-rater reliability and assessment model fidelity as part of your department's quality assurance program.

The system is simple to use and simple to set up. Your users watch professionally produced videos and then administer an assessment based on what they saw. Trainers can analyze the results for indivduals, classes, and across multiple classes. Future trainings target the low scoring areas, and don't waste time on items your staff understand.

Getting staff together at the same time is difficult and has big implications for department workloads. That's why we designed the system to allow staff to watch the videos and take assessments when it works for them, from the comfort of their desks or even their phones or tablets. Trainers set the schedule and users have until the deadline to take the class.

It's never been easier to get started wtih quality assurance, contact Noble today!

Together. With Noble.
