

# In dedication to Steve Burton 1952 - 2008

The 2007 El Dorado ~ Alpine Counties Crop Report is dedicated to the memory of Assistant Agricultural Commissioner/Sealer Steve Burton, who worked for the El Dorado County Department of Agriculture for 26 years. Beginning his agricultural career as an Agricultural Inspector for Santa Clara County in 1979, Steve joined the El Dorado County Department of Agriculture as a Senior Agricultural Biologist in 1982. In 1997 Steve was promoted to Assistant Agricultural Commissioner/Sealer, where he managed all of the various programs.

Steve took his position as Assistant Agricultural Commissioner/Sealer as an honor and loved being an advocate for the agricultural community. Good natured, Steve never balked at a chance to show his generosity or share his wisdom. One of the duties Steve thoroughly enjoyed was serving as our master barbeque chef at the annual Agriculture Roundtable Dinner and Ag Tour functions.

Steve's sense of humor and quick wit lightened many a day at the office. His untimely passing on February 17, 2008 saddened everyone who had the great pleasure of knowing him. He will be missed.

In accordance with Section 2279 of the California Food and Agricultural Code, I hereby submit the 2007 El Dorado & Alpine Counties Crop Report.

The El Dorado County gross crop value for 2007 was \$53.2 million which is an overall decrease of 9.5% from the 2006 values. The decline in values was largely due a 40% decrease in timber values. In addition, the 2007 wine grape crop yielded a lower tonnage per acre that resulted in a 12.1% decrease in production when compared to the previous year. However, better reporting from growers, combined with higher stone fruit crop production led to a 43.3% increase in fruits and nuts category, a 157.5% increase in apiary production and a 44.6% increase in nursery values for 2007.

The monetary values in this report are F.O.B. (Freight On Board) and do not reflect net returns or profits realized by the growers. It is estimated that the impact of agriculture on El Dorado County's economy totaled approximately \$440 million in 2007 of which the wine industry contributed an estimated \$187 million while Apple Hill added another \$98 million.

The Alpine County gross crop value for 2007 was \$4.7 million; this is a slight decrease from the 2006 value.

I wish to express my appreciation to the many individuals and organizations that contributed information to make this report possible.

Respectfully Submitted,

WILLIAM J. STEPHANS
Agricultural Commissioner
Sealer of Weights and Measures

# Sustainable Agriculture Reporting for El Dorado and Alpine Counties

#### Pest Exclusion

Prevents the introduction of detrimental pests that are not of common occurrence in California. Over 1224 inspections at 359 locations were made during 2007.

#### **Pest Detection**

Monitoring program to detect pests that may have entered El Dorado County despite pest exclusion efforts. Over 900 traps were placed in 2007 in both rural and urban areas to detect various pests.

#### **Pest Eradication**

Includes chemical and mechanical treatments. Vine Mealybug infected vineyards and a Striped Mealybug infestation were treated by the growers in cooperation with this Department during the 2007 growing season.

#### **Pest Management**

El Dorado County Noxious Weed Management Group: Coordinates invasive weed control, education and eradication among federal, state, county and private agencies within the Lake Tahoe Basin.

Glassy-winged Sharpshooter (GWSS) Pest Management Program: Includes inspections of all nursery stock shipped into the county from known GWSS infested areas. Over 400 insect traps have been deployed and monitored throughout the county.

Biological Control Program: Releases insects and other organisms that act as natural enemies against noxious pests. Biocontrol projects include: Leaf beetle (Chrysolina quadrigemina) to control Klamath Weed. Seed weevil (Eustenopus villosus), the Peacock fly (Chaetorellia australis), the bud weevil (Bangasternus orientalis), the gall fly (Urophora sirunaseva), the flower weevil (Larinus curtus), the hairy weevil (Eustenopus villosus), and the rust fungus (Puccinia jaceae var. solstitialis) to reduce the spread of Yellow Starthistle. A parasitic wasp (Encarsia partneopea) is being utilized in the control of Ash Whiteflies. The El Dorado County Department of Agriculture monitors and relocates the organisms in cooperation with the California Department of Food and Agriculture.

Vertebrate Pest Management Program: Assists growers and homeowners in the control of deprecating vertebrate pests (i.e., mice, rats, etc.).

Wildlife Management Program: Provides management of wildlife that are deprecating livestock, property and/or presenting a hazard to public health and safety.

#### **Pesticide Monitoring**

Monitoring program to protect public health, the environment and agricultural workers. This program is conducted in cooperation with the California Department of Pesticide Regulation.

#### **Commodity Evaluation and Marketing Programs**

Certified Farmer's Market Program: Allows farmers to market directly to consumers at area Certified Farmer's Markets. Grower inspections are conducted by the Department to validate the registration. There were 55 growers registered as certified growers with production areas within the county.

Organic Program: Includes registration by growers in order to market farm products as organically grown. Grower inspections are conducted by the Department to validate the registration. In 2007, 20 growers were registered as organic, representing 187 acres under production.

Standardization Program: Protects consumers and the fresh fruit, nut and vegetable industry from distribution of substandard products. Standardization laws establish minimum specifications for maturity, quality and size of commodities (i.e., apples, pears) plus standard container pack and labeling. Quality Control inspections are also conducted on nursery stock, eggs and seeds.

# About The Cover:

# Sierra Pacific Industries

Sierra Pacific Industries, a family owned business since 1949, owns and manages approximately 1.8 million acres of forestland in California. To Sierra Pacific Industries (SPI), sustainable forest management means more than planting trees.

Today's industry is concerned about all aspects of forest health, including wildlife habitat, native plant species and water quality. Harvesting trees and producing wood products for the consumer today is much different than it was fifty or a hundred years ago. Technology has dramatically improved, and with it, the ability to monitor forest conditions and lessen the overall impact on the environment.

SPI employs modern forest management practices that closely mimic natural forest events. SPI has invested in state-of-the-art equipment to optimize every fiber of every tree and they are a voluntary partner in the Sustainable Forestry Initiative to help ensure forests are here for generations to come. The expertise of SPI's registered professional foresters and natural resource specialists guarantees that wildlife habitats, water quality and other forest values are protected.
