Commissioners & Char-

I've attached comments for the April 27, 2017 Planning Commission meeting. These comments pertain to the Biological Policy Update/Oak Woodlands Management Plan (ORMP), (File # 12-1203; agenda item #9).

The attached comments include a requested amendment to the ORMP.

Char-please include these comments in the administrative record.

Thank you again-

Cheryl Langley

Shingle Springs resident

Request 3: ORMP Project

<u>Request to Change Heritage Tree Size Designation</u> <u>from 36" to 24"</u> (if Not for All Oak Species—for Blue Oak) Public Comment—Biological Resources Policy Update/ Oak Resources Management Plan (ORMP) Cheryl Langley Planning Commission Meeting April 27, 2017 File No. 12-1203 Agenda Item #9

What is the Current Heritage Tree Size Designation?

The Oak Resources Management Plan (ORMP) currently defines a Heritage Tree as follows:

<u>Heritage Trees:</u> Any live native oak tree of the genus *Quercus* (including blue oak (*Quercus douglasii*), valley oak (*Quercus lobata*), California black oak (*Quercus kelloggii*), interior live oak (*Quercus wislizeni*), canyon live oak (*Quercus chrysolepis*), Oregon oak (*Quercus garryana*), Gracle oak (*Quercus x morehus*), or hybrids thereof) with a single main trunk measuring 36 inches dbh or greater, or with a multiple trunk with an aggregate trunk diameter measuring 36 inches or greater.

Excerpt Source: Draft ORMP, page 29 (dEIR, Appendix C, pdf pg 34 of 215) NOTE: Diameter at breast height (dbh) is measured 4.5 feet above the ground.

How Was Heritage Tree Size Chosen?

The Heritage Oak tree size threshold was derived from language in General Plan Policy 7.4.5.2:¹

A. Oak Tree Removal Permit Process. Except under special exemptions, a tree removal permit shall be required by the County for removal of any native oak tree with a single main trunk of at least 6 inches diameter at breast height (dl@), or a multiple trunk with an aggregate of at least 10 inches dbh. Special exemptions when a tree removal permit is not needed shall include removal of trees less than 36 inches dbh on 1) lands in Williamson Act Contracts. Farmland Security Zone Programs, Timber Production Zones. Agricultural Districts. designated Agricultural Land (AL), and actions pursuant to a Fire Safe plan; 2) all single family residential lots of one acre or less that cannot be further subdivided: 3) when a native oak tree is cut down on the owner's property for the owner's personal use; and 4) when written approval has been received from the County Planning Department. In passing

Do Other Jurisdictions Define "Heritage Tree" as Less Than 36"?

- <u>El Dorado Hills</u> currently has tree protection standards defining Heritage Oaks as 20 inches dbh.²
- The <u>City of Folsom</u> defines Heritage Trees as native oaks over <u>19 inches</u> in diameter.³
- Sacramento County defines Heritage Trees as trees with a 19 inches trunk diameter.⁴
- Placer and Tuolumne counties define Heritage Trees as 24 inches in diameter.⁵
- <u>Tuolumne County</u> has worked to establish an old growth, or "specimen oaks" category. Specimen oaks are defined as "...valley oaks, interior live oaks, canyon live oaks, California black oaks and other native oaks that are at least 18 inches dbh and blue oak trees that are 8 to 10 inches dbh."⁶

Was There a Scientific Basis for the County's Selection of Heritage Tree Size?

No. No oak growth research has been provided as a basis for this size selection in the draft or final EIR. It is simply stated, "The Board of Supervisors has determined that keeping the definition of Heritage Trees at 36 inches, consistent with Policy 7.4.5.2, would best meet the County's goals of balancing resource protection with economic development."⁷

That said, in a discussion relative to Heritage Tree size selection, the final EIR includes a comment from California Department of Fish and Wildlife (CDFW) staff that a 36 inch oak is approximately 50 to 100 years old.⁸ <u>However</u>, <u>research on oaks—specifically blue oaks (*Quercus douglasii*)—disputes this figure</u>. In the case of blue oaks, research shows the likelihood that a 36 inch tree is a mere 100 years old is slim to none.

So How Old is a 36" Oak--Really?

3. The blue oaks depicted below are 10-16 years old.⁹

- Large blue oaks are likely 153 to 390 years old (White, 1966).¹⁰
- Recent inventories of blue oaks have shown that it is quite common for trees only 7 inches in diameter to be 100 or more years old.¹¹
- Harvey ¹² showed that many <u>blue oak saplings less than four feet tall were between 40 and 100 years</u> old.

• The Standiford Study¹³ -- a modeling study based on observed growth rates of blue oak (Quercus douglasii) concluded it would take <u>50 years for blue oak plantings to grow to 3.4 to 4.1 inches dbh.</u>

NOTE: The Standiford Study was relied upon for development of the County's *Interim Interpretive Guidelines*¹⁴ for implementation of Policy 7.4.4.4 [Option A]. The Standiford growth model was based on actual blue oak stand age and structure data (Standiford, 1997) collected from 55 blue oaks in a ten-year old blue oak plantation at the Sierra Foothill Research and Extension Center in Yuba County, California.

Another study by Standiford confirms the slow growth of blue oak.¹⁵

Time	Average DBH	Basal area per ha	Volume per ha	Crown cover
r from present	cm	sq m	cubic m	pct
0	10.9	9.3	30.6	53
10	11.9	11.2	37.1	62
ED	13.0	13.3	45.1	71
30	14.2	15.5	54.5	81

For this study, it was determined *established* blue oak trees grew at a rate of **14.2 cm (or 5.59 inches) per 30 year period**. Using this data, this would mean a **36**" **oak would be approximately 193 years old**—not 50 to 100 years old as speculated by CDFW staff, and repeated by Dudek in the final EIR. And keep in mind, this growth rate is for *already established* oaks—not for oaks from acorn to 36". (See the previous discussion [Phillips, 1996] that describes 12-16 year old seedlings that are 8 to10 inches tall, and 10-15 year old seedlings that are 6-8 inch tall.)

An example of blue oak growth is provided by this specimen taken from the El Dorado Hills area. <u>This specimen is 4.5 inches dbh</u> and estimated to be **95 years old**.

Specimen gathered and evaluated by Don & Ellen Van Dyke.

 <u>Blue oaks exhibit another growth habit which makes a 36" Heritage Tree designation for this species</u> <u>problematic</u>: Growth is extremely slow <u>or even ceases</u> after trees reach <u>26 inches dbh</u> (McDonald, 1985).¹⁶ Thus, many blue oaks—although extremely old—<u>will never reach Heritage Tree status</u>.

How Big is a Heritage Blue Oak?

The blue oaks on this page illustrate a point: one can see the tremendous size required to arrive at Heritage Oak status.

This blue oak <u>IS NOT</u> a Heritage Tree it is **32.5" dbh**.

This blue oak <u>IS</u> a Heritage Tree—by one inch—37" dbh.

12-1203 Public Comment PC Rcvd 04-21-17

What About the Growth Rates of Other Oaks?

Black and live oaks also exhibit slow growth rates. According to McDonald, ¹⁷ black oak (*Quercus kelloggii*) growth rates (from acorns) are estimated to be <u>3.4 inches dbh at 20 years</u> and <u>9 inches dbh at 50 years</u>. Interior live oak (*Quercus wislizeni*) is also reported as slow-growing.¹⁸

These oaks, too, would benefit from a redefinition of "Heritage Oak" as 24" dbh.

What Would it Mean in Practical Terms if 24" was Chosen Over 36" as "Heritage"?

The Board of Supervisors determined that keeping the definition of Heritage Trees at 36 inches "...would best meet the county's goals of balancing resource protection with economic development."¹⁹ But <u>no economic</u> <u>analysis has been done to estimate the difference between a 24" versus 36" designation</u>. However, clearly mitigation costs would increase for those projects with 24" Heritage Trees on-site. Heritage Tree replacement and non-Heritage Tree mitigation requirements are listed below.

For removal of <u>individual trees</u>, mitigation is based on an inch-for-inch replacement of removed trees: "The total of replacement trees shall have a combined diameter of the tree(s) removed." ²⁰ For Heritage Tree mitigation, "...replacement totals shall be calculated based upon an inch-for-inch replacement at a 3:1 ratio."²¹ (NOTE: if <u>acorns</u> are used, they "...shall not exceed 25-percent of any project's tree planting total.")²²

Table 4 Oak Tree Replacement Quantities				
Replacement Tree Size	Number of Trees Required Per Inch of Trunk Diameter Removed			
Acom	3			
1-gallon/TreePot 4	2			
5-gallon	1.5*			
15-gallon	1			

*Quantity of replacement trees to be rounded up to the nearest whole number

Excerpt Source: Draft EIR, Appendix C (draft ORMP), pdf page 20 of 215.

• The in-lieu fee for Heritage Trees (compared to non-Heritage Trees) is proposed as follows:

Table 6 Individual Oak Tree In-Lieu Fee				
Activity	Cost per Inch			
Acquisition and Planting	\$31.92			
Initial Management & Monitoring (Years 1-7)	\$113.40			
Administration (5%)	\$7.27			
Total Cost per Inch (<mark>non-Heritage Trees</mark>) (rounded(& nearest whole dollar)	\$153			
Total Cost Per Inch (Heritage Trees – 3:1 Ratio)	\$459			
Source: New Economics & Advisory Draft Oak Resource In-Lieu Fee	Nexus Study (June 2016)

²¹ Draft EIR, Appendix C (draft ORMP), pdf page 20 of 215.

²² Ibid.

Clearly, if Heritage Tree size is reduced to 24" from 36", the need for Heritage Tree mitigation is likely to impact more projects and increase development costs incrementally. But the *benefit* to the size reduction is at least threefold:

- it may <u>incentivize</u> retention of such trees (consistent with the current ORMP proposal to incentivize oak retention);
- o oak retention will improve project aesthetics; and
- improvement of project aesthetics can equal increased market value and project viability—a benefit to the developer.

Regarding market value, a study on the impact of oak trees on land values yielded the following:

The aesthetic and amenity values associated with property having at least 40 trees per acre will yield a land value that is 22 to 27 percent higher than that of treeless property.²³

Commissioners-

Please recommend to the Board of Supervisors that the <u>Heritage Tree size be designated 24" rather than 36</u>" – if not for all oaks, for blue oaks (Quercus douglasii).

BIA Comment Letter--4-27-17 agenda item #9.pdf 93K

ASSOCIATION

April 21, 2017

Mr. Gary Miller Chair, El Dorado County Planning Commission 2850 Fairlane Ct. Placerville, CA 95667

RE: 4/27/17 agenda item #9-SUPPORT FOR STAFF RECOMMENDATIONS

Dear Chairman Miller:

The North State BIA supports recommendations 1-4 as described in the staff report. We believe the current proposals adequately reflect the community's policies in the General Plan and provide the appropriate balance between competing goals and interests.

We would like to commend El Dorado County for their comprehensive effort to update their Biological Resources Policy and Oak Resources Management Plan. The proposed policies have been thoroughly evaluated, and the county has hired a highly professional firm to prepare the analysis. The public outreach has been extensive over the last ten-year period, with at least 160 public meetings.

The Option A alternative, in effect since Fall 2012, has been restrictive and has stopped many economic development opportunities in the County. The newly proposed policy is balanced and is more restrictive than what is required under state law (Woodland Conservation Act of 2001, Public Resources Code section 21083.4) and the policies of many surrounding jurisdictions.

With regard to the in-lieu mitigation method, the payment of approximately \$8,000 to \$16,000 per acre for mitigation, and a minimum of \$16,524 for Heritage Oaks, are not insignificant costs. This method for mitigation, along with the other mitigation alternatives, meet state requirements under CEQA.

The proposed policy of prioritizing preservation in the Priority Conservation Areas (PCAs), rather than in the areas close to the area of impact, is sound. The areas where the most future development will occur are already fragmented habitat, and conservation makes sense in the areas with the highest habitat value.

We respectfully urge the Planning Commission to take actions 1-4 as described in the staff report.

Sincerely.

Chris Norem Director of Governmental & Public Affairs North State Building Industry Association

CC: Brian Shinault, James Williams, Jeff Haberman, Jeff Hansen
