

# Memorandum

**To:** Jeremy Sutter, Jeffrey DeMure + Associates  
**From:** Matt Weir, P.E., T.E., PTOE  
**Re:** Supplemental Traffic Analysis – Revised Project Access  
*El Dorado Hills Memory Care Center*  
**Date:** January 11, 2017

Per your request, we have completed this supplemental traffic analysis to document the effect of modified site access on the conclusions documented in the original traffic study completed by our office for the subject project<sup>1</sup>. The modified access, which eliminates access from Green Valley Road and incorporates a right-turn in only driveway along Francisco Drive, is depicted in **Exhibit 1**. This access condition maintains the full access driveway that was originally included along Cambria Way. The modified project's study intersections<sup>2</sup> are shown in **Exhibit 2**. Using the same trip generation data per the original traffic study, the site generated trips were assigned to the study intersections based on the revised project access conditions. The revised project trip assignment is shown in **Exhibit 3**. Finally, the revised "plus project" traffic volumes for both Existing (2015) and Near-Term (2025) Conditions are depicted in **Exhibit 4** and **Exhibit 5**, respectively.

The intersection Level of Service (LOS) analyses for these revised access conditions were completed in a manner consistent with the original traffic study. Accordingly, the updated LOS results are presented in **Table 1** and **Table 2** below.

**Table 1** – Existing (2015) and Existing (2015) plus Proposed Project Intersection Levels of Service

#	Intersection	Analysis Scenario <sup>+</sup>	Traffic Control	AM Peak-Hour		PM Peak-Hour	
				Delay (seconds)	LOS	Delay (seconds)	LOS
1	Green Valley Road @ Francisco Drive	Exist. Exist.+PP	Signal	43.7 43.8	D D	29.9 31.7	C C
2	Francisco Drive @ Cambria Way/Embarcadero Drive	Exist.	SSSC*	36.2 (EB)	E	34.5 (EB)	D
		Exist.+PP		36.6 (EB)	E	36.8 (EB)	E
3	El Dorado Hills Boulevard @ Francisco Drive	Exist. Exist.+PP	AWSC	See original traffic study			
		Exist.		Plus Project Analysis Scenarios Only			
4	Green Valley Road @ Project Site Access Driveway	Exist.	SSSC*	Plus Project Analysis Scenarios Only			
		Exist.+PP		0.0 (SB)	A	0.0 (SB)	A
5	Cambria Way @ Project Site Access Driveway	Exist.	SSSC*	Plus Project Analysis Scenarios Only			
		Exist.+PP		8.7 (SB)	A	8.8 (SB)	A

<sup>+</sup> Exist. = Existing (2015), Exist. + PP = Existing (2015) plus Proposed Project  
\* Control delay for worst minor approach (worst minor movement) for SSSC.

## ATTACHMENT T

<sup>1</sup> Traffic Impact Analysis, El Dorado Hills Memory Care Center (WO#22), Kimley-Horn and Associates, Inc., June 5, 2015.

<sup>2</sup> Please note that Intersection #3 (El Dorado Hills Boulevard @ Francisco Drive) is unaffected by the revised access conditions documented in this memorandum. Accordingly, the results from the original Traffic Impact Analysis are not replicated in this documentation.

**Table 2 – Near-Term (2025) and Near-Term (2025) plus Proposed Project Intersection Levels of Service**

#	Intersection	Analysis Scenario <sup>+</sup>	Traffic Control	AM Peak-Hour		PM Peak-Hour	
				Delay (seconds)	LOS	Delay (seconds)	LOS
1	Green Valley Road @ Francisco Drive	NT	Signal	44.6	D	46.3	D
		NT+PP		44.7	D	49.7	D
2	Francisco Drive @ Cambria Way/Embarcadero Drive	NT	SSSC*	28.1 (EB)	D	43.6 (EB)	E
		NT+PP		27.9 (EB)	D	46.8 (EB)	E
3	El Dorado Hills Boulevard @ Francisco Drive	NT NT+PP	AWSC	See original traffic study			
4	Green Valley Road @ Project Site Access Driveway	NT	Plus Project Analysis Scenarios Only				
		NT+PP	SSSC*	0.0 (SB)	A	0.0 (SB)	A
5	Cambria Way @ Project Site Access Driveway	NT	Plus Project Analysis Scenarios Only				
		NT+PP	SSSC*	8.7 (SB)	A	8.8 (SB)	A

<sup>+</sup> NT = Near-Term (2025), NT + PP = NT (2025) plus Proposed Project  
\* Control delay for worst minor approach (worst minor movement) for SSSC.

As indicated in **Table 1** and **Table 2**, the study intersections operate from LOS A to LOS E with the addition of project traffic during the AM and PM peak-hours. The analysis worksheets for this scenario are provided in **Appendix A** and **Appendix B**.

We also completed a planning level assessment of the need for traffic signalization for the un-signalized study intersections under the conditions resulting from the revised project access. This evaluation was performed consistently with the peak-hour warrant methodologies noted in Section 4C of the *California Manual on Uniform Traffic Control Devices (CMUTCD), 2014 Edition*. A summary of the peak-hour warrant results is presented in **Table 3**.

**Table 3 – Traffic Signal Warrant Analysis Results**

#	Intersection	Analysis Scenario			
		Existing (2015)	Existing (2015) plus PP	Near-Term (2025)	Near-Term (2025) plus PP
2	Francisco Dr @ Cambria Wy	No / No	No / No	No / No	No / No
3	El Dorado Hills Blvd @ Francisco Dr	See original traffic study			
4	Cambria Way @ Project Access Dwy		No / No		No / No
5	Green Valley Rd @ Site Access Dwy		No / No		No / No

Results are presented in **AM / PM format**.  
Note: Peak-hour warrant is satisfied if Condition A or B is met.

As shown in **Table 3**, the proposed project does not cause the peak-hour signal warrant to be satisfied at any of the study intersections. Detailed results of this analysis are presented in **Appendix C**.

Finally, vehicle queuing for the study intersections was evaluated under the conditions resulting from the revised project access. For the queuing analysis, the anticipated vehicle queues for critical movements at these intersections were evaluated. The calculated vehicle queues were compared to actual or anticipated vehicle storage/segment lengths. Results of the queuing evaluation are presented in **Table 4**. Analysis sheets that include the anticipated vehicle queues are presented in Appendices A and B. As presented in **Table 4**, the addition of the proposed project adds additional queuing to several of the study locations.

**Table 4 – Intersection Queueing Evaluation Results for Select Locations**

\* Intersection approach with available storage length equal to segment length; <sup>+</sup> Dual left-turn lane; <sup>++</sup> Source: Per Page 9-127, *A Policy on Geometric Design of Highways and Streets*, AASHTO, 2011. ((Peak-Hour Volume/30 min)\*25 feet)

In conclusion, based on the analyses documented in this memorandum, the revised project access does not result in any significant environmental impacts to transportation facilities as defined by the County.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.  
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.

# 2 Francisco Drive @ Cambria Way	No / No	??? / ???
# 4 Green Valley Road @ Project Access	No / No	??? / ???
# 5 Cambria Way @ Project Access Drivew	No / No	??? / ???

## Peak Hour Delay Signal Warrant Report

Intersection #2 Francisco Drive @ Cambria Way

Base Volume Alternative: Peak Hour Warrant NOT Met

	North Bound	South Bound	East Bound	West Bound
Movement:	L - T - R	L - T - R	L - T - R	L - T - R
Control:	Uncontrolled	Uncontrolled	Stop Sign	Stop Sign
Lanes:	1 0 0 1 0	1 0 1 0 1	0 0 1! 0 0	0 0 0 0 1
Initial Vol:	3 420	14 37 540	10 21 0	1 0 0 53
ApproachDel:	xxxxxx	xxxxxx	36.1	11.7

Approach[eastbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.2]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=22]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=4][total volume=1099]

SUCCEED - Total volume greater than or equal to 800 for intersection  
with four or more approaches.

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.2]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=53]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=4][total volume=1099]

SUCCEED - Total volume greater than or equal to 800 for intersection  
with four or more approaches.

## SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

## Peak Hour Volume Signal Warrant Report [Urban]

Intersection #2 Francisco Drive @ Cambria Way

## SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

## **EXECUTIVE SUMMARY**

This report documents the results of a traffic impact analysis completed for the El Dorado Hills Memory Care Center project proposed to be located in the southwest corner of the Green Valley Road intersection with Francisco Drive in El Dorado Hills, California (the “proposed project” or “project”). The purpose of this impact analysis is to identify potential environmental impacts to transportation facilities as required by the California Environmental Quality Act (CEQA). This study was performed in accordance with the El Dorado County Community Development Agency’s *Transportation Impact Study Guidelines*, and the scope of work provided by a representative of the County.

The 6.85-acre project site is proposed to be developed with a 40,000-square foot memory care center. Access to the site will be provided via one full access driveway along Cambria Way, and one right-in/right-out driveway along Green Valley Road. The following intersections are included in this evaluation:

1. Green Valley Road at Francisco Drive
2. Francisco Drive at Cambria Way/Embarcadero Drive
3. Francisco Drive at El Dorado Hills Boulevard
4. Green Valley Road at Project Site Access Driveway (Project Only)
5. Cambria Way at Project Site Access Driveway (Project Only)

Based on the County’s requirements, this LOS analysis was conducted for the above facilities for the following scenarios:

- A. Existing (2015) Conditions
- B. Existing (2015) plus Proposed Project Conditions
- C. Near-Term (2025) Conditions
- D. Near-Term (2025) plus Proposed Project Conditions

Significant findings of this study include:

- The proposed project is estimated to generate 172 total new daily trips, with 9 new trips occurring during the AM peak-hour, and 14 new trips occurring during the PM peak-hour.
- The County’s current Travel Demand Model (TDM) incorporates non-residential growth for the subject parcel within the project’s Traffic Analysis Zone (TAZ #614). Because the project (20 employees, 64 beds) is less intensive than what is currently included in the County’s TDM (a total of 48 non-retail employees), new Cumulative (2035) analyses are not required to be completed as part of this study.
- As defined by the County, the addition of the proposed project to the Existing (2015) and Near-Term (2025) scenarios does not worsen conditions at the study intersections. As a result, the project’s potential environmental impacts to transportation facilities are considered to be ***less than significant***.

## INTRODUCTION

This report documents the results of a traffic impact analysis completed for the El Dorado Hills Memory Care Center project proposed to be located in the southwest corner of the Green Valley Road intersection with Francisco Drive in El Dorado Hills, California (the “proposed project” or “project”). The purpose of this impact analysis is to identify potential environmental impacts to transportation facilities as required by the California Environmental Quality Act (CEQA). This study was performed in accordance with the El Dorado County Community Development Agency’s *Transportation Impact Study Guidelines*, and the scope of work provided by a representative of the County<sup>1</sup>.

The remaining sections of this report document the proposed project, analysis methodologies, impacts and mitigation, and general study conclusions.

## PROJECT DESCRIPTION

The 6.85-acre project site is proposed to be developed with a 40,000-square foot memory care center. Access to the site will be provided via one full access driveway along Cambria Way, and one right-in/right-out driveway along Green Valley Road. The project location is shown in **Figure 1**, and the proposed project site plan is shown in **Figure 2**. The following intersections are included in this evaluation:

1. Green Valley Road at Francisco Drive
2. Francisco Drive at Cambria Way/Embarcadero Drive
3. Francisco Drive at El Dorado Hills Boulevard
4. Green Valley Road at Project Site Access Driveway (Project Only)
5. Cambria Way at Project Site Access Driveway (Project Only)

**Figure 3** illustrates the study facilities, existing traffic control, and existing lane configurations.

## PROJECT AREA ROADWAYS

The following are descriptions of the primary roadways in the vicinity of the project.

**US Route 50 (US-50)** is an east-west freeway located south of the project site. Generally, US-50 serves all of El Dorado County’s major population centers and provides connections to Sacramento County to the west and the State of Nevada to the east. Primary access to the project site from US-50 is provided at the El Dorado Hills Boulevard/Latrobe Road interchange. Within the general project area, US-50 currently serves approximately 90,000 vehicles per day<sup>2</sup> (vpd) with three travel lanes in each direction, west of El Dorado Hills Boulevard/Latrobe Road.

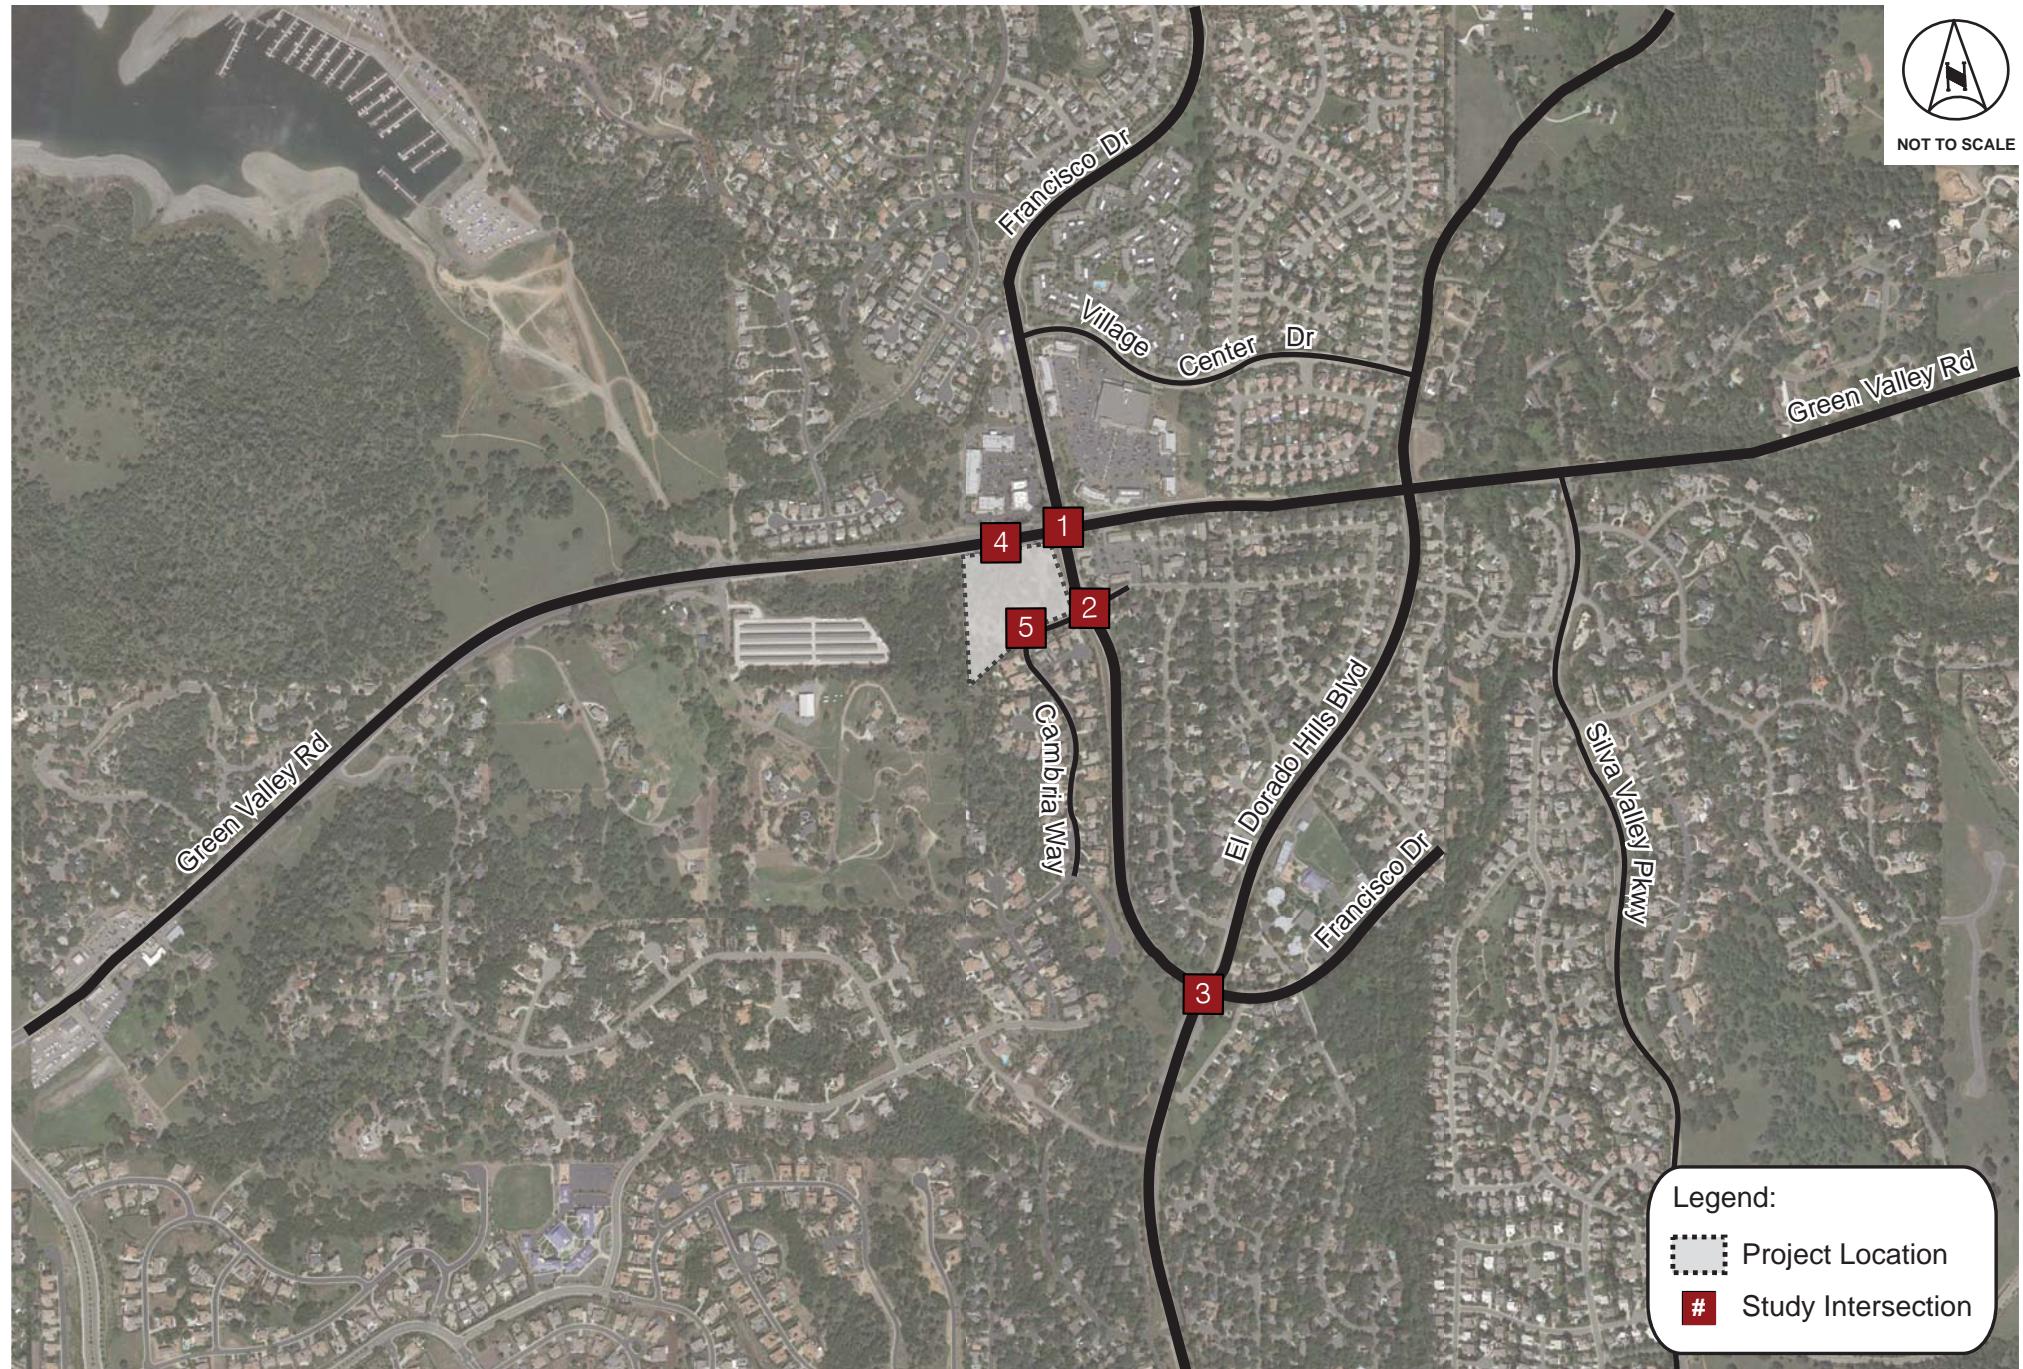

**Green Valley Road** is an east-west arterial roadway that connects Placerville with western portions of El Dorado County and eastern Sacramento County, south of Folsom Lake. Through the project area, Green Valley Road provides two travel lanes in each direction and serves approximately 25,600 vehicles per day<sup>3</sup>.

**Francisco Drive** is a north-south collector roadway that provides access to residential areas north of Green Valley Road and connects with El Dorado Hills Boulevard to the south. Francisco Drive has one travel lane in each direction and serves as a primary southern connection between El Dorado Hills Boulevard and Green Valley Road for vehicles destined for, and coming from points to the west.

**Cambria Way** and **Embarcadero Drive** are two-lane local roadways that provide access to residential areas surrounding Francisco Drive. The proposed project has direct access to Cambria Way.

## ASSESSMENT OF PROPOSED PROJECT

### Proposed Project Trip Generation

Memory care living facilities provide a living environment with intensive, long-term medical care for seniors with serious health and dementia conditions in a fully-staffed and monitored facility. Due to the nature of these facilities, residents are comprised of older adults who typically do not drive; thus, the site trip generation is anticipated to be low and predominantly composed of employee and visitor trips.

Trip generation for development projects is typically calculated based on rates contained in the Institute of Transportation Engineer's (ITE) publication, *Trip Generation Manual*. The *Trip Generation Manual* is a standard reference used by jurisdictions throughout the country for the estimation of trip generation potential of proposed developments. A trip is defined in the *Trip Generation Manual* as a single or one-directional vehicle movement with either the origin or destination at the project site. In other words, a trip can be either "to" or "from" the site. In addition, a single customer visit to a site is counted as two trips (i.e., one to and one from the site).

Trip generation for the proposed project was estimated using ITE's *Trip Generation Manual, 9<sup>th</sup> Edition* based on the "Assisted Living" category (ITE Land Use 254). "Assisted Living" is understood to represent residential settings that provide assistance to mentally or physically limited persons, typically with Alzheimer's or ALS, similar to the proposed project. As noted in the *Trip Generation Manual*, employees, visitors, and delivery trucks make most of the trips to these facilities. Truck traffic was captured for some of the studies used in developing the ITE rates, and the findings indicate that truck traffic volume was very low overall, with most trips occurring in the weekday midday period. The anticipated trip generation for this project is shown in **Table 1**.

**Table 1 – Proposed Project Trip Generation**

Land Use (ITE Code)	Size (# beds)	Daily Trips	AM Peak-Hour				PM Peak-Hour					
			Total Trips	IN		OUT		Total Trips	IN			
				%	Trips	%	Trips		%	Trips		
Assisted Living (254)	64	172	9	65%	6	35%	3	14	44%	6	56%	8
<b>Net New External Trips:</b>		<b>172</b>	<b>9</b>		<b>6</b>		<b>3</b>	<b>14</b>		<b>6</b>		<b>8</b>

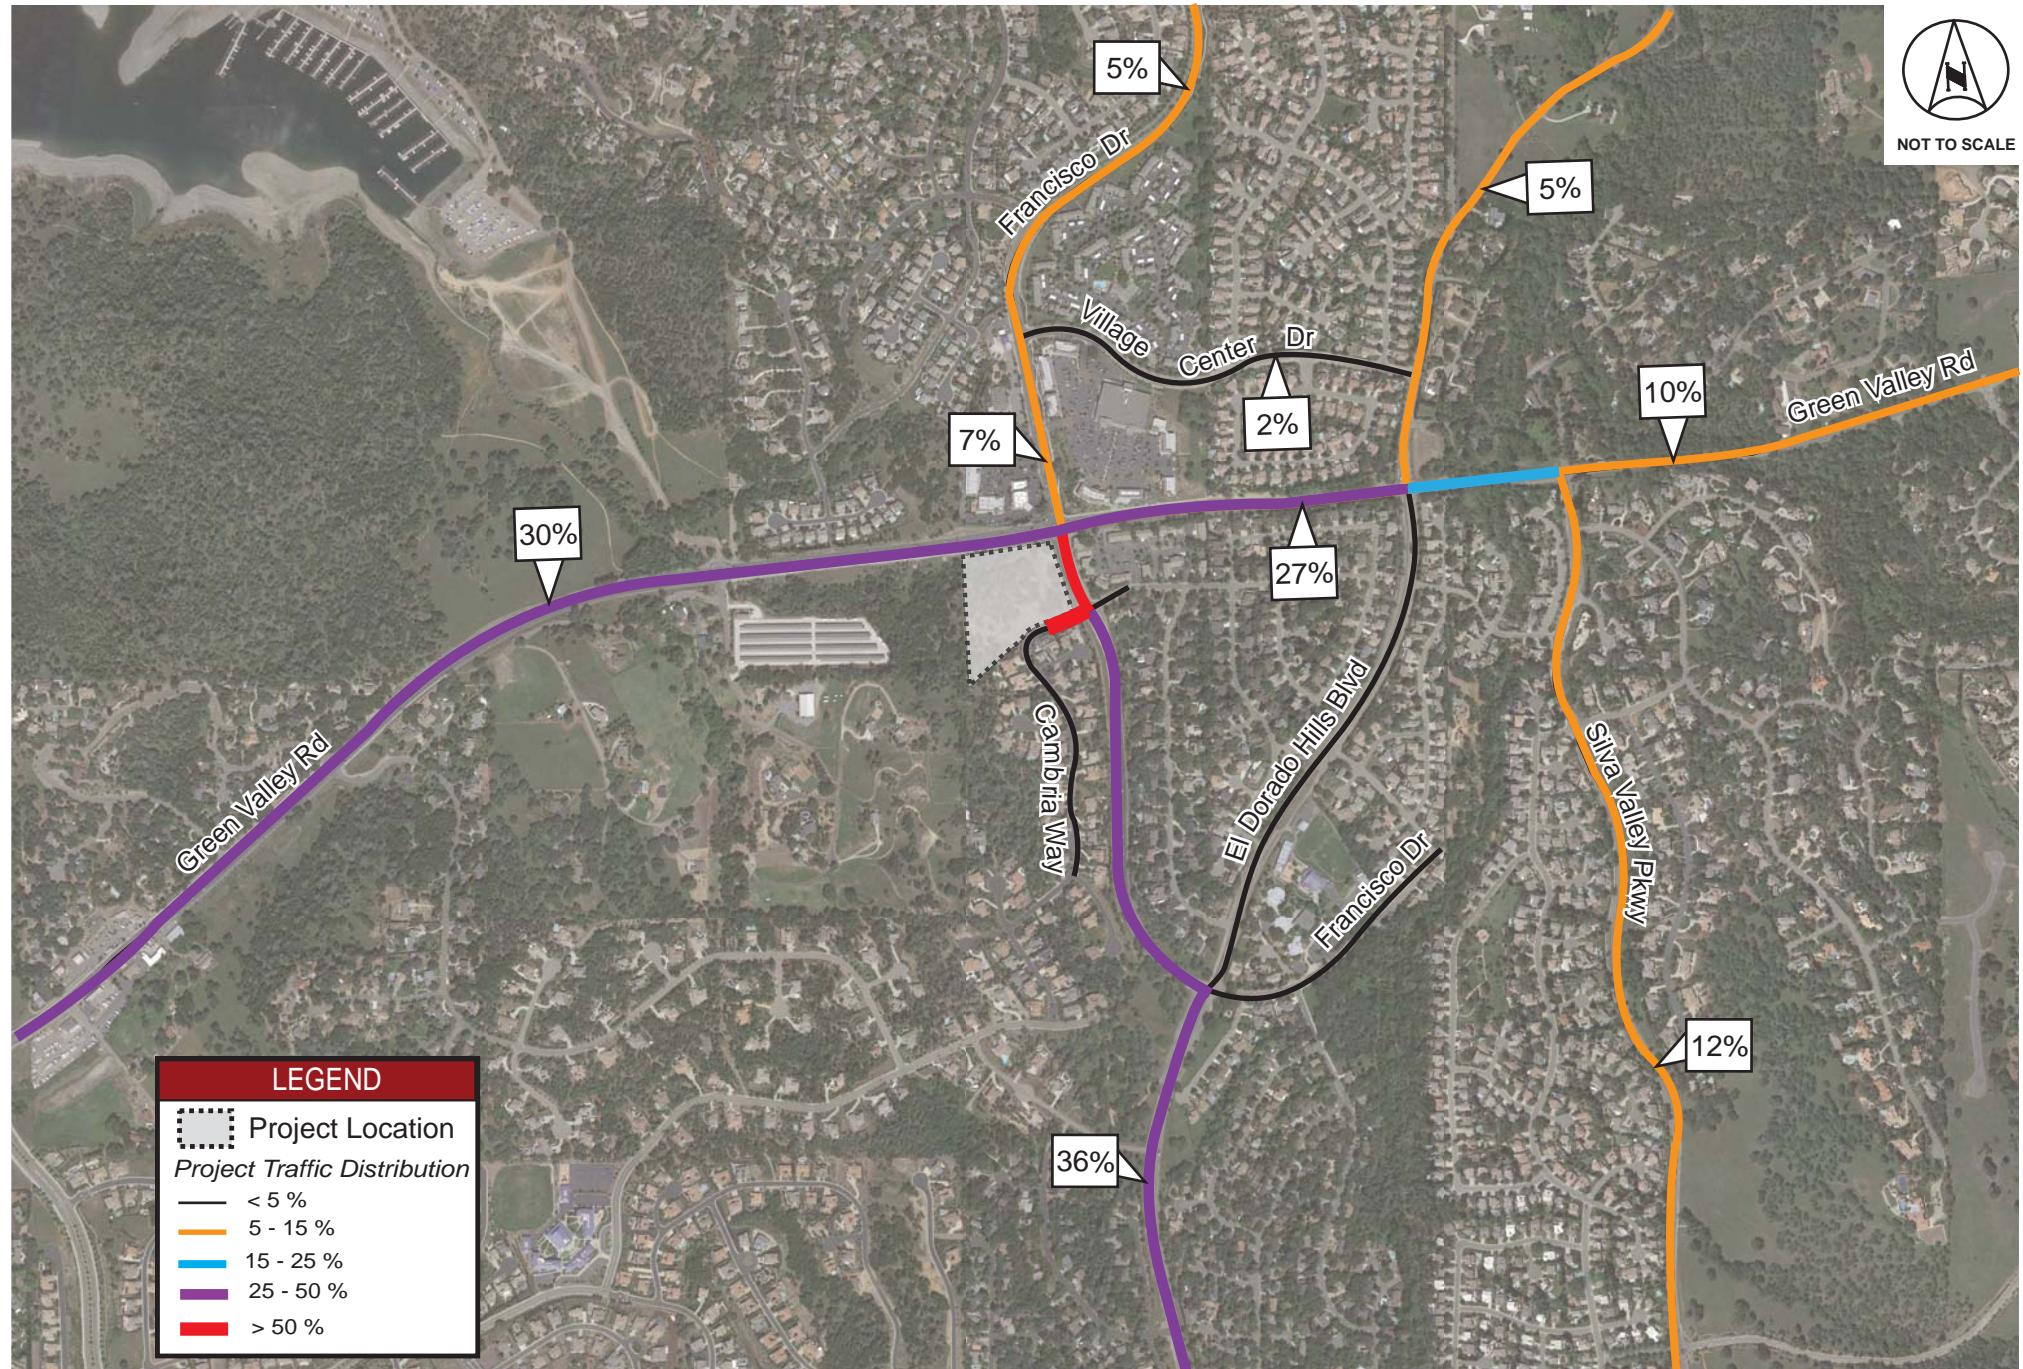

Source: *Trip Generation Manual, 9<sup>th</sup> Edition*, ITE.

As shown in **Table 1**, the proposed project is estimated to generate 172 total new daily trips, with 9 new trips occurring during the AM peak-hour, and 14 new trips occurring during the PM peak-hour. For additional reference, the maximum peak hour trip generation for the facility, which is anticipated to occur on Sunday afternoons, was estimated to be 23 peak hour trips.

### Proposed Project Trip Distribution

The distribution of project traffic was based on existing traffic volumes and general knowledge of the travel patterns in western El Dorado County. The project trip distribution percentages are illustrated in **Figure 4**. The resulting AM and PM peak-hour traffic volumes attributed to the proposed project are illustrated in **Figure 5**.

## TRAFFIC IMPACT ANALYSIS METHODOLOGY

Analysis of transportation facility significant environmental impacts is based on the concept of Level of Service (LOS). The LOS of a facility is a qualitative measure used to describe operational conditions. LOS ranges from A (best), which represents minimal delay, to F (worst), which represents heavy delay and a facility that is operating at or near its functional capacity. Levels of Service for this study were determined using methods defined in the *Highway Capacity Manual, 2010* (HCM) and appropriate traffic analysis software.

The HCM includes procedures for analyzing side-street stop controlled (SSSC), all-way stop controlled (AWSC), and signalized intersections. The SSSC procedure defines LOS as a function of average control delay for each minor street approach movement. Conversely, the AWSC and signalized intersection procedures define LOS as a function of average control delay for the intersection as a whole. **Table 2** presents intersection LOS definitions as defined in the HCM.

**Table 2 – Intersection Level of Service Criteria**

Level of Service (LOS)	Un-Signalized	Signalized
	Average Control Delay* (sec/veh)	Control Delay per Vehicle (sec/veh)
A	≤ 10	≤ 10
B	> 10 – 15	> 10 – 20
C	> 15 – 25	> 20 – 35
D	> 25 – 35	> 35 – 55
E	> 35 – 50	> 55 – 80
F	> 50	> 80

*Source: Highway Capacity Manual, 2010*  
\* Applied to the worst lane/lane group(s) for SSSC

### Consistency with General Plan Land Use Designation

As confirmed by a representative of the County<sup>4</sup>, the County's current Travel Demand Model (TDM) incorporates non-residential growth for the subject parcel within the project's Traffic Analysis Zone (TAZ #614). Because the project (20 employees, 64 beds) is less intensive than what is currently included in the County's TDM (a total of 48 non-retail employees), new Cumulative (2035) analyses are not required to be completed as part of this study.

Based on the above information and direction from County's representative, this LOS analysis was conducted for the study facilities for the following scenarios:

- A. Existing (2015) Conditions
- B. Existing (2015) plus Proposed Project Conditions
- C. Near-Term (2025) Conditions
- D. Near-Term (2025) plus Proposed Project Conditions

The following is a discussion of the analyses for these scenarios:

<sup>4</sup> Email from Chirag Safi, Kittelson & Associates, Inc., April 15, 2015.

## EXISTING (2015) CONDITIONS

Recent peak-hour traffic volumes for the Green Valley Road intersection with Francisco Drive intersection were obtained from a recent study completed, by others, for the Green Valley Road Corridor<sup>5</sup>. Two (2) new weekday AM and PM peak period intersection turning movement traffic counts were conducted in March 2015, for the Francisco Drive intersections with Cambria Way/Embarcadero Drive and El Dorado Hills Boulevard. These counts were conducted between the hours of 6:30 a.m. and 9:30 a.m. and 3:30 p.m. and 6:30 p.m. It is worth noting that a two percent heavy vehicle factor was incorporated in this, and all subsequent analysis scenarios. At the time of this study, the El Dorado Hills Boulevard intersection with Francisco Drive was under construction to implement the County's Capital Improvement Project (CIP) #71358 (Francisco Drive Right-Turn Pocket). This project involves the addition of an eastbound right-turn lane from Francisco Drive and a complementary southbound receiving lane onto El Dorado Hills Boulevard. These improvements are reflected in all subsequent analysis scenarios.

Existing (2015) peak-hour turn movement volumes are presented in **Figure 6**, and the traffic count data sheets are provided in **Appendix A**. **Table 3** presents the peak-hour intersection operating conditions for this analysis scenario.

**Table 3 – Existing (2015) Intersection Levels of Service**

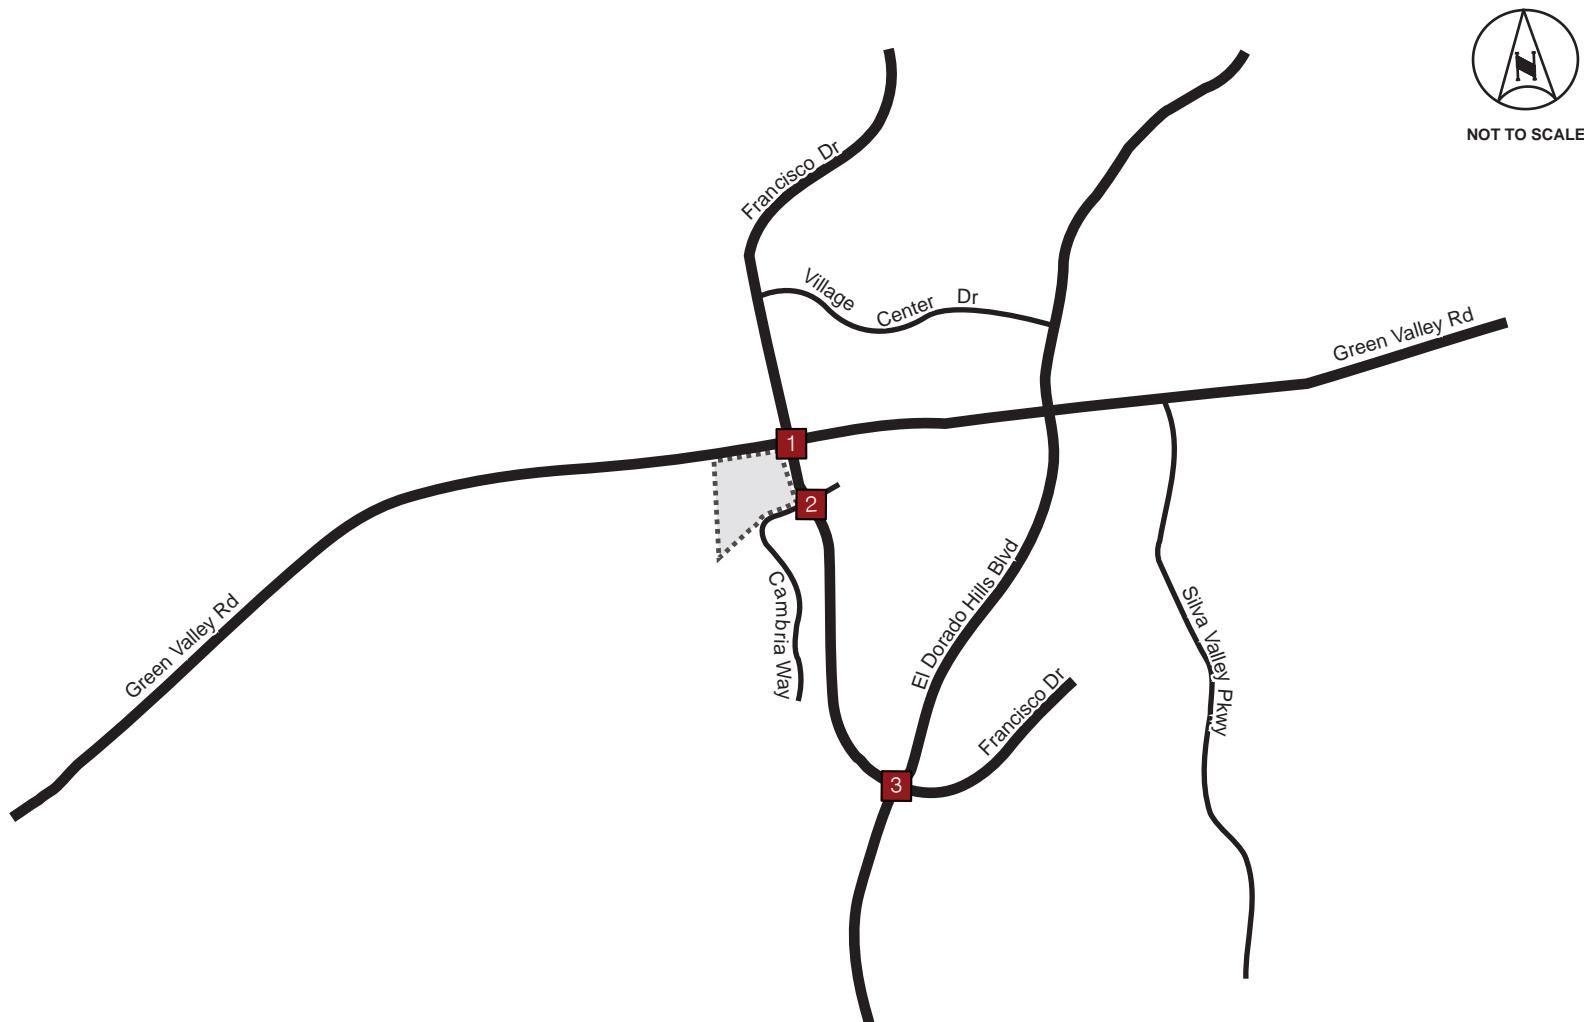

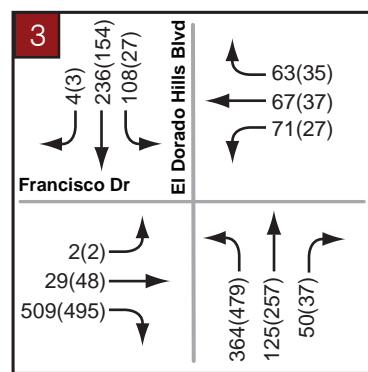

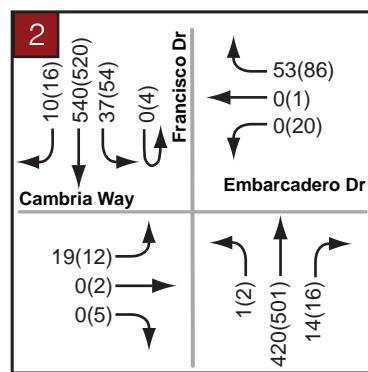

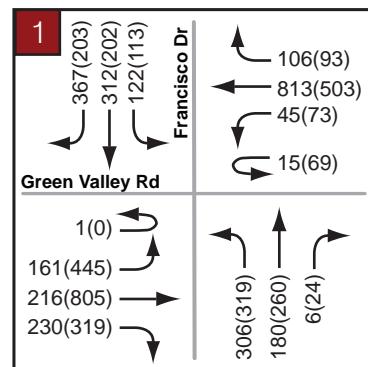

#	Intersection	Traffic Control	AM Peak-Hour		PM Peak-Hour	
			Delay (seconds)	LOS	Delay (seconds)	LOS
1	Green Valley Road @ Francisco Drive	Signal	43.7	D	29.9	C
2	Francisco Drive @ Cambria Way/Embarcadero Drive	SSSC*	36.2 (EB)	E	34.5 (EB)	D

## EXISTING (2015) PLUS PROPOSED PROJECT CONDITIONS

Peak-hour traffic associated with the proposed project was added to the existing traffic volumes and levels of service were determined at the study intersections. **Table 4** provides a summary of the intersection analysis and **Figure 7** provides the AM and PM peak-hour traffic volumes at the study intersections for this analysis scenario.

**Table 4** – Existing (2015) and Existing (2015) plus Proposed Project Intersection Levels of Service

## NEAR-TERM (2025) CONDITIONS

Consistent with the traffic forecasting methodology specified by a representative of the County<sup>1</sup>, traffic projections for this study are based on the County's current Travel Demand Model (TDM)<sup>6</sup> and recently approved 20-year growth projections. These Near-Term, year 2025 conditions are based on a straight-line interpolation between model Existing (2010) and Cumulative (2035) forecast. Details regarding the volume forecasting and intersection turning movement development are presented in **Appendix D**.

**Table 5** provides a summary of the intersection analysis and **Figure 8** provides the AM and PM traffic volumes for this analysis scenario.

**Table 5 – Near-Term (2025) Intersection Levels of Service**

#	Intersection	Traffic Control	AM Peak-Hour		PM Peak-Hour	
			Delay (seconds)	LOS	Delay (seconds)	LOS
1	Green Valley Road @ Francisco Drive	Signal	44.6	D	46.3	D
2	Francisco Drive @ Cambria Way/Embarcadero Drive	SSSC*	28.1 (EB)	D	43.6 (EB)	E
3	El Dorado Hills Boulevard @ Francisco Drive	AWSC	39.8	E	46.1	E
4	Green Valley Road @ Project Site Access Driveway	SSSC*	<i>Plus Project Analysis Scenarios Only</i>			
5	Cambria Way @ Project Site Access Driveway	SSSC*	<i>Plus Project Analysis Scenarios Only</i>			

\* Control delay for worst minor approach (worst minor movement) for SSSC.

As indicated in **Table 5**, the study intersections operate from LOS C to LOS E during the AM and PM peak-hours. The analysis worksheets for this scenario are provided in **Appendix E**.

## NEAR-TERM (2025) PLUS PROPOSED PROJECT CONDITIONS

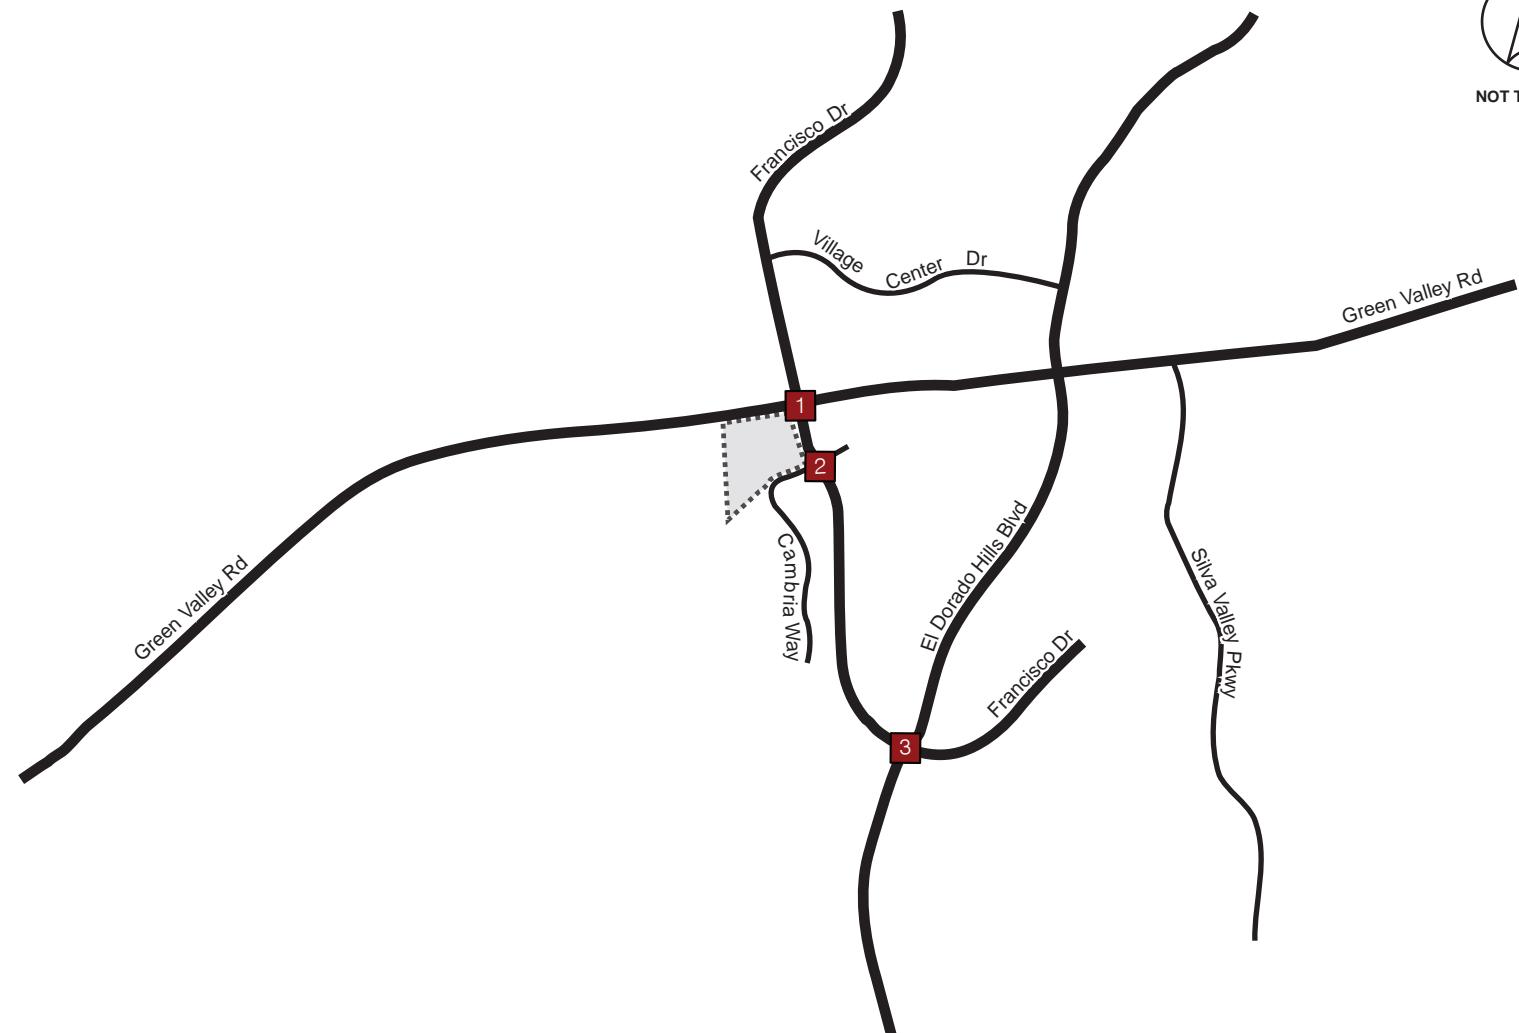

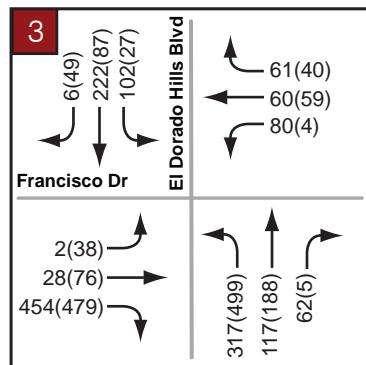

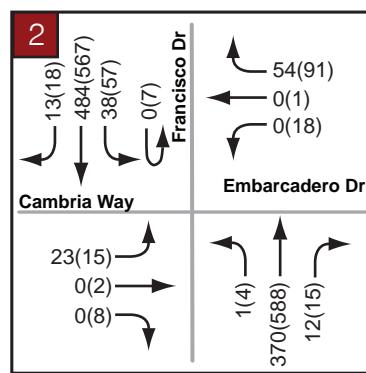

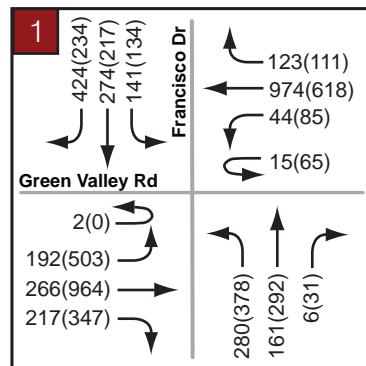

Peak-hour traffic associated with the proposed project was added to the Near-Term (2015) traffic volumes, and levels of service were determined at the study facilities. **Table 6** provides a summary of the intersection operating conditions for this analysis scenario. **Figure 9** provides the AM and PM traffic volumes for this analysis scenario.

As indicated in **Table 6**, the study intersections operate from LOS A to LOS E during the AM and PM peak-hours. The analysis worksheets for this scenario are provided in **Appendix F**.

<sup>6</sup> As directed by a representative of the County, the Dixon Ranch project was manually added to the County's 2035 TDM for use in the traffic forecasting efforts for this project.

## IMPACTS AND MITIGATION

### Standards of Significance

Project impacts were determined by comparing conditions with the proposed project to those without the project. Impacts for intersections are created when traffic from the proposed project forces the LOS to fall below a specific threshold.

The County's standards<sup>7</sup> specify the following:

"Level of Service (LOS) for County-maintained roads and State highways within the unincorporated areas of the County *shall not be worse than LOS E in the Community Regions.*" (El Dorado County General Plan Policy TC-Xd) The study intersections are located within the El Dorado Hills Community Region.

"If a project causes the peak-hour LOS or volume/capacity ratio on a county road or State highway that would otherwise meet the County standards (without the project) to exceed the [given] values, then the impact shall be considered significant."

"If any county road or state highway fails to meet the [given] standards for peak hour LOS or volume/capacity ratios without the proposed project, and the project will worsen conditions on the road or highway, then the impact shall be considered significant." According to General Plan Policy TC-Xe<sup>8</sup>, 'worsen' is defined as "a 2 percent increase in traffic during the a.m. peak hour, p.m. peak hour, or daily, or the addition of 100 or more daily trips, or the addition of 10 or more trips during the a.m. peak hour or the p.m. peak hour."

<sup>7</sup> *Transportation Impact Study Guidelines*, El Dorado County Community Development Agency, November 2014.

<sup>8</sup> *El Dorado County General Plan, Transportation and Circulation Element*, July 2004.

## Impacts and Mitigation

### Existing (2015) plus Proposed Project Conditions

As reflected in **Table 4**, the addition of the proposed project does not result in a significant impact as defined by the County.

Impacts:

*None.*

Mitigation:

*None Required.*

### Near-Term (2025) plus Proposed Project Conditions

As reflected in **Table 6**, the addition of the proposed project does not result in a significant impact as defined by the County.

Impacts:

*None.*

Mitigation:

*None Required.*

## OTHER CONSIDERATIONS

### Peak-Hour Traffic Signal Warrant Evaluation

A planning level assessment of the need for traffic signalization was performed for the un-signalized study intersections. This evaluation was performed consistently with the peak-hour warrant methodologies noted in Section 4C of the *California Manual on Uniform Traffic Control Devices (CMUTCD), 2014 Edition*. A summary of the peak-hour warrant results are presented in **Table 7**.

**Table 7 – Traffic Signal Warrant Analysis Results**

#	Intersection	Analysis Scenario			
		Existing (2015)	Existing (2015) plus PP	Near-Term (2025)	Near-Term (2025) plus PP
2	Francisco Dr @ Cambria Wy	No / No	No / No	No / No	No / No
3	El Dorado Hills Blvd @ Francisco Dr	Yes / Yes	Yes / Yes	Yes / Yes	Yes / Yes
4	Cambria Way @ Project Access Dwy		No / No		No / No
5	Green Valley Rd @ Site Access Dwy		No / No		No / No

Results are presented in **AM / PM format**.  
Note: Peak-hour warrant is satisfied if Condition A or B is met.

As shown in **Table 7**, intersection #3 (El Dorado Hills Blvd @ Francisco Dr) satisfies the peak-hour signal warrant with and without the addition of the proposed project. However, the proposed project does not cause the peak-hour signal warrant to be satisfied at any of the study intersections. Detailed results of this analysis are presented in **Appendix G**.

### **Sight Distance Evaluation**

A sight distance evaluation was completed for both site access driveways (Intersections #4 and #5). These evaluations were based on observed horizontal and vertical geometric conditions and were performed in accordance with the guidelines presented in the *Geometric Design of Highways and Streets, 2011*, published by the American Association of State Highway and Transportation Officials (AASHTO).

According to AASHTO, an assumed 30 mph design speed (25 mph posted speed limit) requires a minimum of 200 feet of Stopping Sight Distance (SSD). Adequate SSD was documented along the Cambria Way approaches to the site driveway. Furthermore, an assumed 60 mph design speed (55 mph posted speed limit) requires a minimum of 570 feet of SSD. Adequate sight distance was observed to the left (west) for the Green Valley Road intersection with the site access driveway.

To more thoroughly assess conditions for eastbound Cambria Way traffic at Francisco Drive, we also completed an evaluation of sight distance for this intersection approach. According to AASHTO, an assumed 45 mph design speed (40 mph posted speed limit) requires a minimum of 360-feet of SSD. Adequate AASHTO SSD was documented along the Francisco Drive approaches to Cambria Way. In all cases, roadside vegetation should be maintained to preserve sight distance.

### **Intersection Queuing Evaluation**

Vehicle queuing for the study intersections was evaluated. For the queuing analysis, the anticipated vehicle queues for critical movements at these intersections were evaluated. The calculated vehicle queues were compared to actual or anticipated vehicle storage/segment lengths. Results of the queuing evaluation are presented in **Table 8**. Analysis sheets that include the anticipated vehicle queues are presented in Appendices B, C, E, and F. As presented in **Table 8**, the addition of the proposed project adds additional queuing to several of the study locations.

### **Site Plan, Access, and On-site Circulation Evaluation**

The site plan for the proposed project (**Figure 2**) was qualitatively reviewed for general access and on-site circulation. According to the site plan, access to the site will be provided via two (2) driveways, one along Cambria Way and one along Green Valley Road. Level of service and delay data was previously reported for these intersections. The combination of these two access points, as well as the on-site circulation system provides adequate access to/from both Green Valley Road and Francisco Drive (via Cambria Way).

The proposed project's Green Valley Road Driveway is proposed to accommodate both right-in and right-out movements. Adequate deceleration distance should be provided and the acceleration distance should be considered as part of the existing eastbound right-turn pocket. The proposed geometrics and access are virtually identical to the existing Safeway center driveway located along the westbound approach to the Green Valley Road intersection with Francisco Drive. Furthermore, as documented in Appendices B, C, E, and F, the northbound right movement from the proposed project is not anticipated to be blocked by the eastbound approach queues at the Green Valley Road intersection with Francisco Drive.

In addition, *Fire Safe Regulations*<sup>9</sup> state that on-site roadways shall "provide for safe access for emergency wildland fire equipment and civilian evacuation concurrently, and shall provide unobstructed traffic circulation during a wildfire emergency..." All project roadways shall be designed and constructed in accordance with these requirements.

<sup>9</sup> *Fire Safe Regulations*, Title 14 Natural Resources, Division 1.5 Department of Forestry, Chapter 7 – Fire Protection, Subchapter 2 SRA Safe Regulations, Article 2 Emergency Access, El Dorado County Building Department.

### Preliminary Traffic Safety Evaluation

According to the County's 2011 *Accident Location Study*<sup>10</sup>, several study area sites (i.e., intersections and roadway segments) experienced three (3) or more accidents during a three-year period between January 1, 2009, and December 31, 2011. According to the Study, these sites were selected for investigation and determination of corrective action(s). **Table 9** provides a summary of the study area sites and their selected actions.

According to the *Study*, eight (8) sites "do not require further review at this time. However, these sites will continue to be monitored and any subsequent increase in the frequency of accidents may necessitate further review and analysis." One (1) site has a pending improvement and it is anticipated that, "upon completion, [this] improvement will substantially reduce the number of accidents."

<sup>10</sup> Annual Accident Location Study 2011, County of El Dorado Department of Transportation, March 18, 2012.

**Table 9 – Project Area Sites Selected for Investigation**

Site #	Location Description	Accident Rate <sup>+</sup>	Identified Action
13	El Dorado Hills Blvd, US 50 On/Off Ramps	1.07	Pending Improvements

<sup>+</sup> # Accidents per Million Vehicles (MV) for single sites (intersections/curves), # Accidents per Million Vehicle Miles (MVM) for roadway sections.

### Bicycle and Pedestrian Facilities Evaluation

According to Chapter 5 of the *El Dorado County Bicycle Transportation Plan*, Class II Bike Lanes are proposed for Green Valley Road, Francisco Drive, and El Dorado Hills Boulevard in the vicinity of the project site. In addition, Class III Bike Routes are proposed for Francisco Drive and Salmon Falls Road/Lakehills Drive north of Green Valley Road. A Class I Bike Path is also proposed for El Dorado Hills Boulevard, south of Francisco Drive.

While the project will not result in removal of a bikeway/bike lane or prohibition of implementation of the facilities identified in the *Plan*, it is required to include pedestrian/bicycle paths connecting to adjacent commercial, research and development, or industrial projects and any schools, parks, or other public facilities. The proposed project will be required to construct on-site roadway and pedestrian facilities in accordance with County design guidelines. These on-site pedestrian and bicycle facilities will connect the project with the proposed adjacent Class II Bike Lanes along Green Valley Road and Francisco Drive. Through these connections to the proposed bike lane network, the project will provide continuity with adjacent projects, schools, parks, and other public facilities.

## CONCLUSIONS

Based upon the analysis documented in this report, the following conclusions are offered:

- The proposed project is estimated to generate 172 total new daily trips, with 9 new trips occurring during the AM peak-hour, and 14 new trips occurring during the PM peak-hour.
- The County's current Travel Demand Model (TDM) incorporates non-residential growth for the subject parcel within the project's Traffic Analysis Zone (TAZ #614). Because the project (20 employees, 64 beds) is less intensive than what is currently included in the County's TDM (a total of 48 non-retail employees), new Cumulative (2035) analyses are not required to be completed as part of this study.
- As defined by the County, the addition of the proposed project to the Existing (2015) and Near-Term (2025) scenarios does not worsen conditions at the study intersections. As a result, the project's potential environmental impacts to transportation facilities are considered to be **less than significant**.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.  
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.  
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.  
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.

Control: Uncontrolled Uncontrolled Stop Sign Stop Sign  
Signal Warrant Rule #1: [vehicle-hours=0.1]  
FAIL - Vehicle-hours less than 4 for one lane approach.  
Signal Warrant Rule #2: [approach volume=19]  
FAIL - Approach volume less than 100 for one lane approach.  
Signal Warrant Rule #3: [approach count=4][total volume=1094]  
SUCCEED - Total volume greater than or equal to 800 for intersection  
with four or more approaches.

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.2]  
FAIL - Vehicle-hours less than 4 for one lane approach.  
Signal Warrant Rule #2: [approach volume=53]  
FAIL - Approach volume less than 100 for one lane approach.  
Signal Warrant Rule #3: [approach count=4][total volume=1094]  
SUCCEED - Total volume greater than or equal to 800 for intersection  
with four or more approaches.

## SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

## Peak Hour Volume Signal Warrant Report [Urban]

Intersection #2 Intersection 2

## SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach[southbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=6]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=48]

FAIL - Total volume less than 650 for intersection  
with less than four approaches.

## SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

## SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

*Traffic Impact Analysis*

**El Dorado Hills Memory Care Center (WO#22)**  
**El Dorado Hills, California**

June 5, 2015

**Prepared for:**

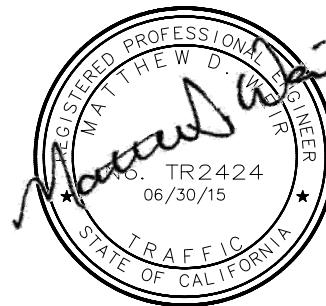

Sierra Capital & Investment, Inc.

**Prepared by:**

**Kimley»Horn**

2720 Gateway Oaks Drive, Suite 310  
Sacramento, California 95833

Phone: (916) 858-5800

## **EXECUTIVE SUMMARY**

This report documents the results of a traffic impact analysis completed for the El Dorado Hills Memory Care Center project proposed to be located in the southwest corner of the Green Valley Road intersection with Francisco Drive in El Dorado Hills, California (the “proposed project” or “project”). The purpose of this impact analysis is to identify potential environmental impacts to transportation facilities as required by the California Environmental Quality Act (CEQA). This study was performed in accordance with the El Dorado County Community Development Agency’s *Transportation Impact Study Guidelines*, and the scope of work provided by a representative of the County.

The 6.85-acre project site is proposed to be developed with a 40,000-square foot memory care center. Access to the site will be provided via one full access driveway along Cambria Way, and one right-in/right-out driveway along Green Valley Road. The following intersections are included in this evaluation:

1. Green Valley Road at Francisco Drive
2. Francisco Drive at Cambria Way/Embarcadero Drive
3. Francisco Drive at El Dorado Hills Boulevard
4. Green Valley Road at Project Site Access Driveway (Project Only)
5. Cambria Way at Project Site Access Driveway (Project Only)

Based on the County’s requirements, this LOS analysis was conducted for the above facilities for the following scenarios:

- A. Existing (2015) Conditions
- B. Existing (2015) plus Proposed Project Conditions
- C. Near-Term (2025) Conditions
- D. Near-Term (2025) plus Proposed Project Conditions

Significant findings of this study include:

- The proposed project is estimated to generate 172 total new daily trips, with 9 new trips occurring during the AM peak-hour, and 14 new trips occurring during the PM peak-hour.
- The County’s current Travel Demand Model (TDM) incorporates non-residential growth for the subject parcel within the project’s Traffic Analysis Zone (TAZ #614). Because the project (20 employees, 64 beds) is less intensive than what is currently included in the County’s TDM (a total of 48 non-retail employees), new Cumulative (2035) analyses are not required to be completed as part of this study.
- As defined by the County, the addition of the proposed project to the Existing (2015) and Near-Term (2025) scenarios does not worsen conditions at the study intersections. As a result, the project’s potential environmental impacts to transportation facilities are considered to be ***less than significant***.

## INTRODUCTION

This report documents the results of a traffic impact analysis completed for the El Dorado Hills Memory Care Center project proposed to be located in the southwest corner of the Green Valley Road intersection with Francisco Drive in El Dorado Hills, California (the “proposed project” or “project”). The purpose of this impact analysis is to identify potential environmental impacts to transportation facilities as required by the California Environmental Quality Act (CEQA). This study was performed in accordance with the El Dorado County Community Development Agency’s *Transportation Impact Study Guidelines*, and the scope of work provided by a representative of the County<sup>1</sup>.

The remaining sections of this report document the proposed project, analysis methodologies, impacts and mitigation, and general study conclusions.

## PROJECT DESCRIPTION

The 6.85-acre project site is proposed to be developed with a 40,000-square foot memory care center. Access to the site will be provided via one full access driveway along Cambria Way, and one right-in/right-out driveway along Green Valley Road. The project location is shown in **Figure 1**, and the proposed project site plan is shown in **Figure 2**. The following intersections are included in this evaluation:

1. Green Valley Road at Francisco Drive
2. Francisco Drive at Cambria Way/Embarcadero Drive
3. Francisco Drive at El Dorado Hills Boulevard
4. Green Valley Road at Project Site Access Driveway (Project Only)
5. Cambria Way at Project Site Access Driveway (Project Only)

**Figure 3** illustrates the study facilities, existing traffic control, and existing lane configurations.

## PROJECT AREA ROADWAYS

The following are descriptions of the primary roadways in the vicinity of the project.

**US Route 50 (US-50)** is an east-west freeway located south of the project site. Generally, US-50 serves all of El Dorado County’s major population centers and provides connections to Sacramento County to the west and the State of Nevada to the east. Primary access to the project site from US-50 is provided at the El Dorado Hills Boulevard/Latrobe Road interchange. Within the general project area, US-50 currently serves approximately 90,000 vehicles per day<sup>2</sup> (vpd) with three travel lanes in each direction, west of El Dorado Hills Boulevard/Latrobe Road.

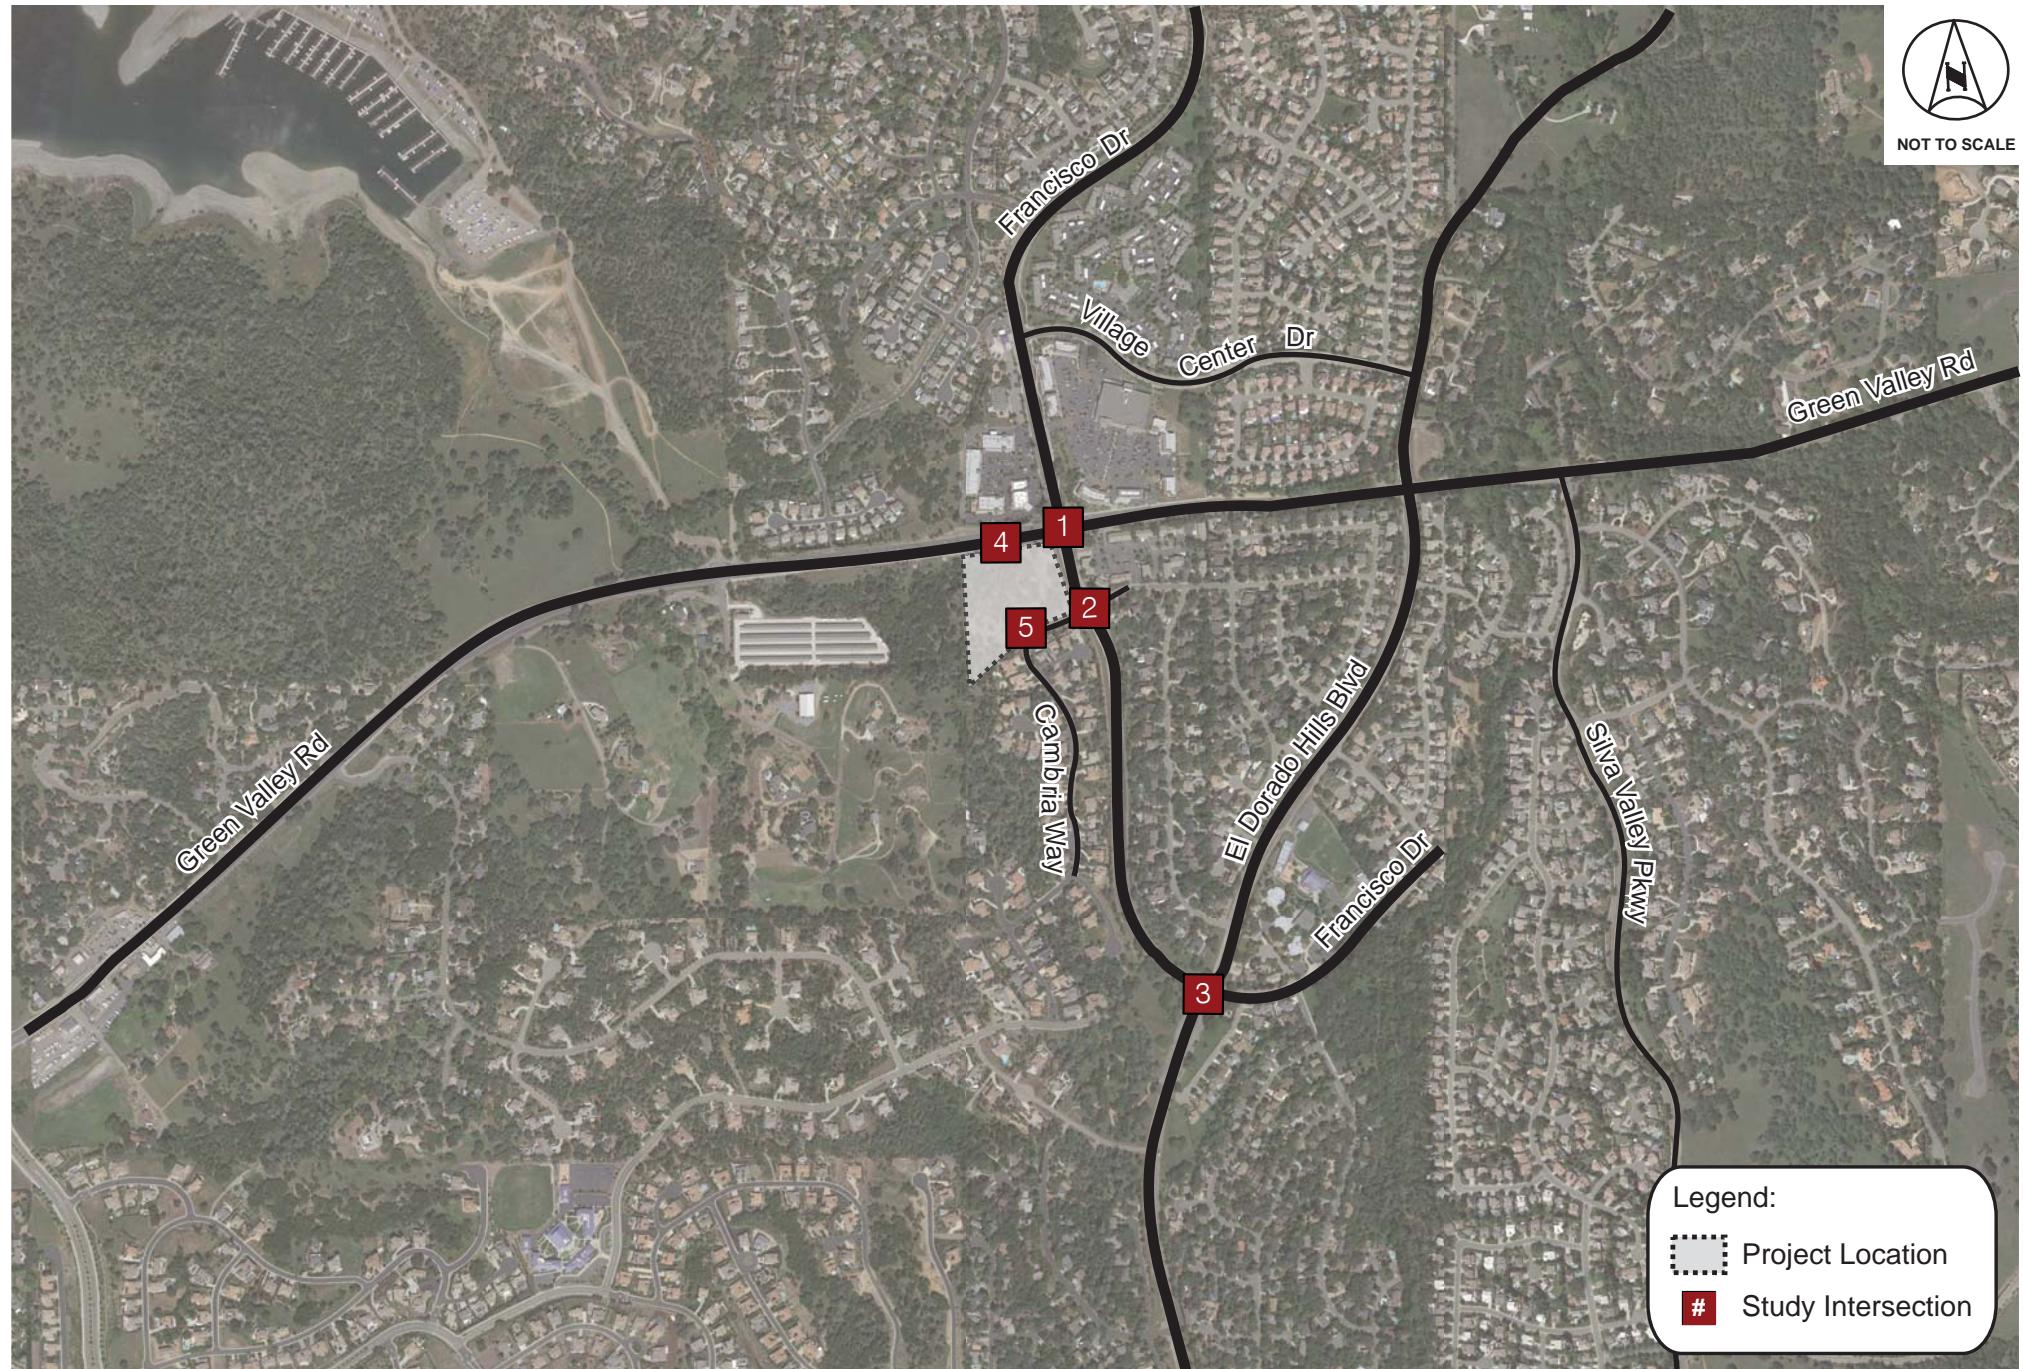

**Green Valley Road** is an east-west arterial roadway that connects Placerville with western portions of El Dorado County and eastern Sacramento County, south of Folsom Lake. Through the project area, Green Valley Road provides two travel lanes in each direction and serves approximately 25,600 vehicles per day<sup>3</sup>.

**Francisco Drive** is a north-south collector roadway that provides access to residential areas north of Green Valley Road and connects with El Dorado Hills Boulevard to the south. Francisco Drive has one travel lane in each direction and serves as a primary southern connection between El Dorado Hills Boulevard and Green Valley Road for vehicles destined for, and coming from points to the west.

**Cambria Way** and **Embarcadero Drive** are two-lane local roadways that provide access to residential areas surrounding Francisco Drive. The proposed project has direct access to Cambria Way.

## ASSESSMENT OF PROPOSED PROJECT

### Proposed Project Trip Generation

Memory care living facilities provide a living environment with intensive, long-term medical care for seniors with serious health and dementia conditions in a fully-staffed and monitored facility. Due to the nature of these facilities, residents are comprised of older adults who typically do not drive; thus, the site trip generation is anticipated to be low and predominantly composed of employee and visitor trips.

Trip generation for development projects is typically calculated based on rates contained in the Institute of Transportation Engineer's (ITE) publication, *Trip Generation Manual*. The *Trip Generation Manual* is a standard reference used by jurisdictions throughout the country for the estimation of trip generation potential of proposed developments. A trip is defined in the *Trip Generation Manual* as a single or one-directional vehicle movement with either the origin or destination at the project site. In other words, a trip can be either "to" or "from" the site. In addition, a single customer visit to a site is counted as two trips (i.e., one to and one from the site).

Trip generation for the proposed project was estimated using ITE's *Trip Generation Manual, 9<sup>th</sup> Edition* based on the "Assisted Living" category (ITE Land Use 254). "Assisted Living" is understood to represent residential settings that provide assistance to mentally or physically limited persons, typically with Alzheimer's or ALS, similar to the proposed project. As noted in the *Trip Generation Manual*, employees, visitors, and delivery trucks make most of the trips to these facilities. Truck traffic was captured for some of the studies used in developing the ITE rates, and the findings indicate that truck traffic volume was very low overall, with most trips occurring in the weekday midday period. The anticipated trip generation for this project is shown in **Table 1**.

**Table 1 – Proposed Project Trip Generation**

Land Use (ITE Code)	Size (# beds)	Daily Trips	AM Peak-Hour				PM Peak-Hour					
			Total Trips	IN		OUT		Total Trips	IN			
				%	Trips	%	Trips		%	Trips		
Assisted Living (254)	64	172	9	65%	6	35%	3	14	44%	6	56%	8
<b>Net New External Trips:</b>		<b>172</b>	<b>9</b>		<b>6</b>		<b>3</b>	<b>14</b>		<b>6</b>		<b>8</b>

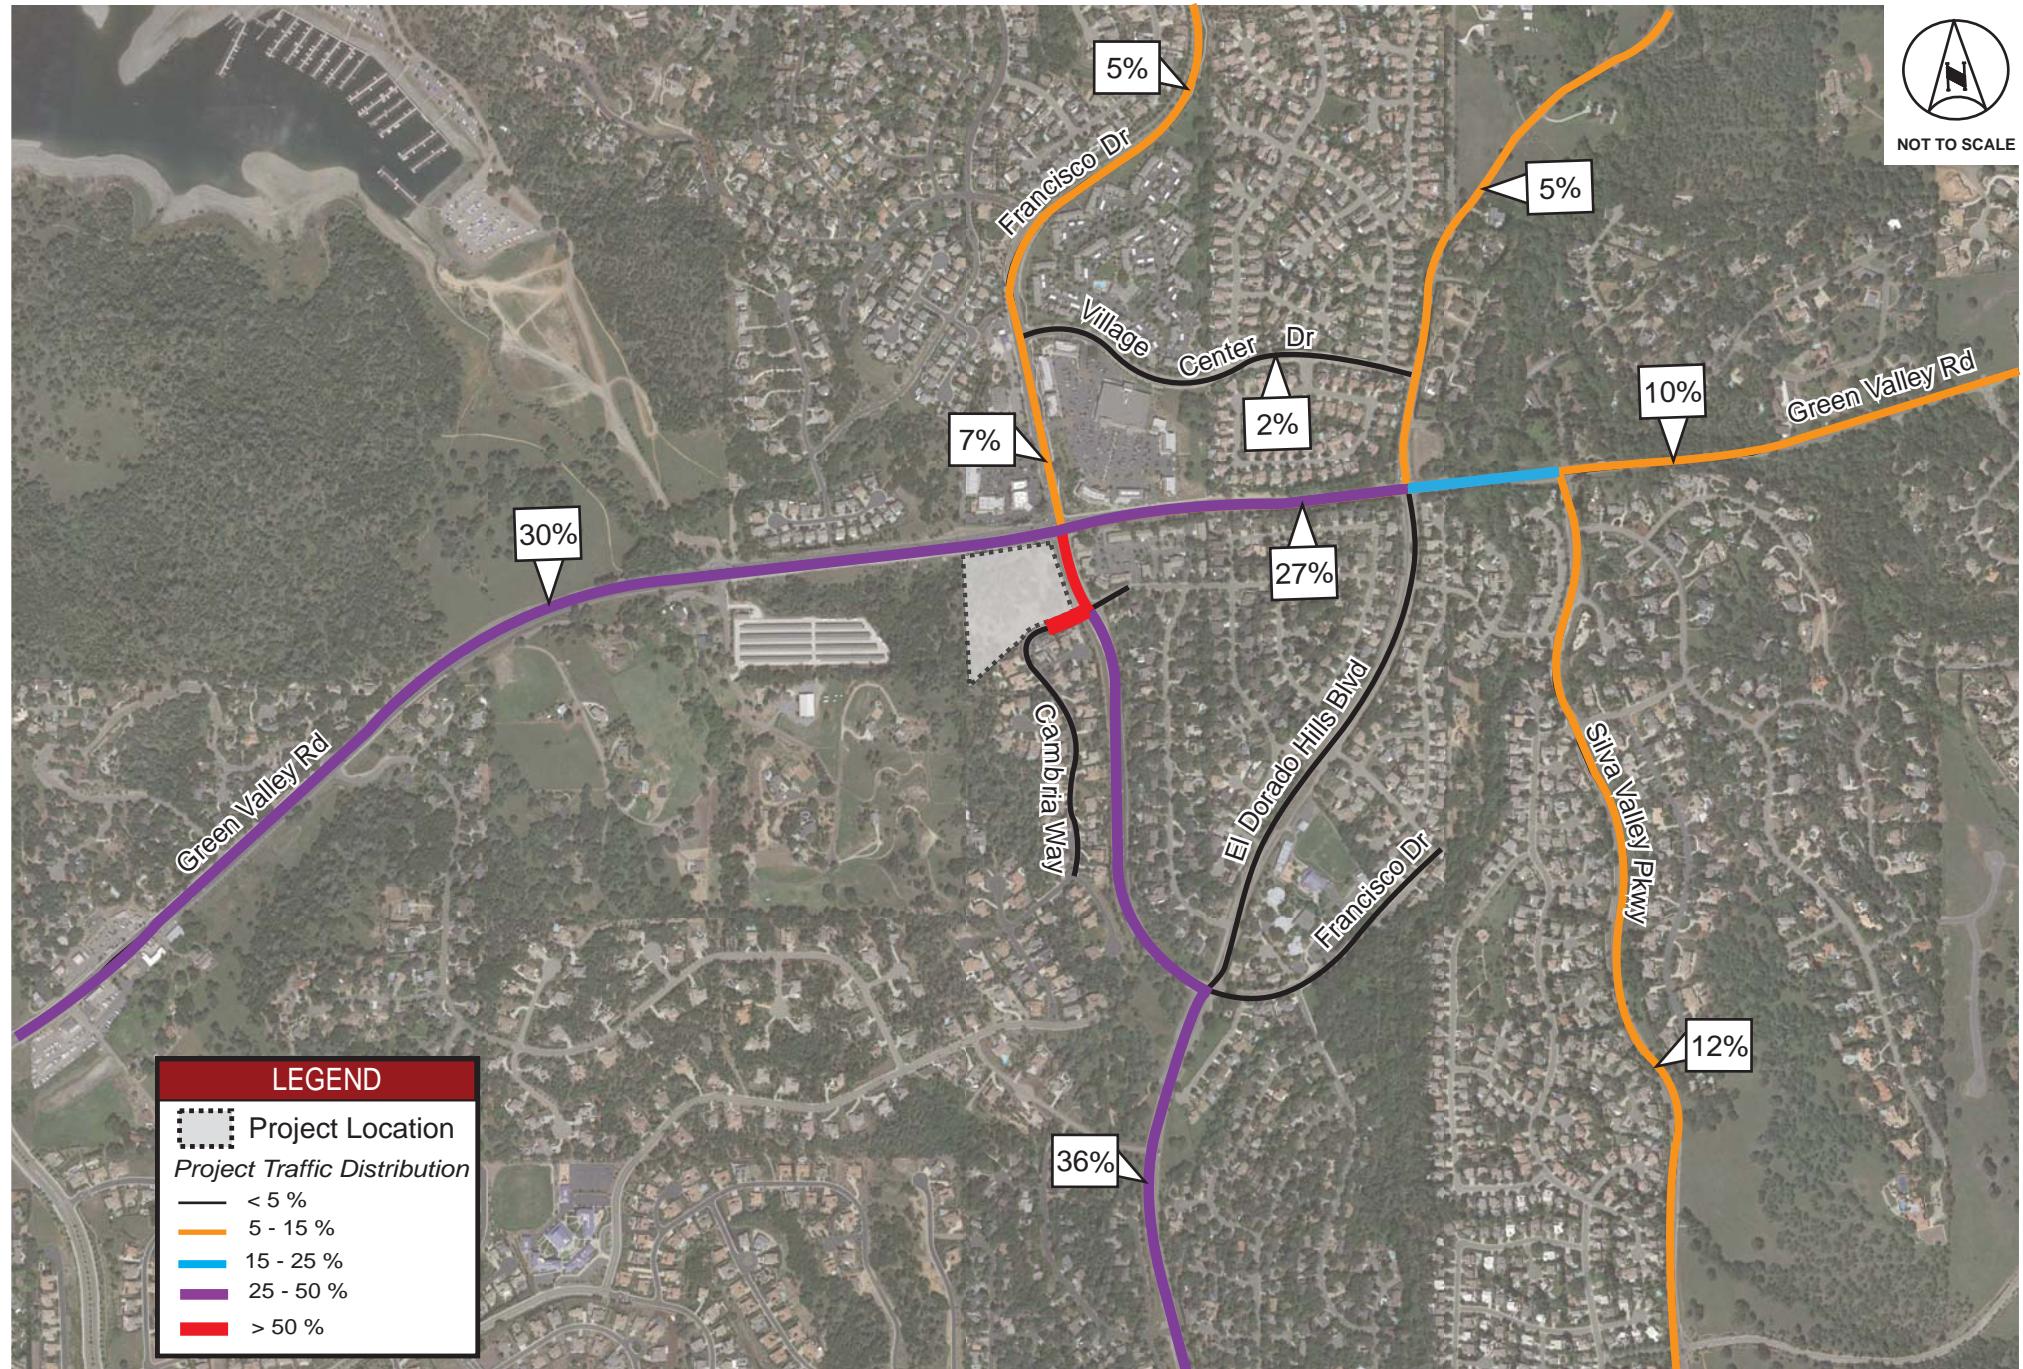

Source: *Trip Generation Manual, 9<sup>th</sup> Edition*, ITE.

As shown in **Table 1**, the proposed project is estimated to generate 172 total new daily trips, with 9 new trips occurring during the AM peak-hour, and 14 new trips occurring during the PM peak-hour. For additional reference, the maximum peak hour trip generation for the facility, which is anticipated to occur on Sunday afternoons, was estimated to be 23 peak hour trips.

### Proposed Project Trip Distribution

The distribution of project traffic was based on existing traffic volumes and general knowledge of the travel patterns in western El Dorado County. The project trip distribution percentages are illustrated in **Figure 4**. The resulting AM and PM peak-hour traffic volumes attributed to the proposed project are illustrated in **Figure 5**.

## TRAFFIC IMPACT ANALYSIS METHODOLOGY

Analysis of transportation facility significant environmental impacts is based on the concept of Level of Service (LOS). The LOS of a facility is a qualitative measure used to describe operational conditions. LOS ranges from A (best), which represents minimal delay, to F (worst), which represents heavy delay and a facility that is operating at or near its functional capacity. Levels of Service for this study were determined using methods defined in the *Highway Capacity Manual, 2010* (HCM) and appropriate traffic analysis software.

The HCM includes procedures for analyzing side-street stop controlled (SSSC), all-way stop controlled (AWSC), and signalized intersections. The SSSC procedure defines LOS as a function of average control delay for each minor street approach movement. Conversely, the AWSC and signalized intersection procedures define LOS as a function of average control delay for the intersection as a whole. **Table 2** presents intersection LOS definitions as defined in the HCM.

**Table 2 – Intersection Level of Service Criteria**

Level of Service (LOS)	Un-Signalized	Signalized
	Average Control Delay* (sec/veh)	Control Delay per Vehicle (sec/veh)
A	≤ 10	≤ 10
B	> 10 – 15	> 10 – 20
C	> 15 – 25	> 20 – 35
D	> 25 – 35	> 35 – 55
E	> 35 – 50	> 55 – 80
F	> 50	> 80

*Source: Highway Capacity Manual, 2010*  
\* Applied to the worst lane/lane group(s) for SSSC

### Consistency with General Plan Land Use Designation

As confirmed by a representative of the County<sup>4</sup>, the County's current Travel Demand Model (TDM) incorporates non-residential growth for the subject parcel within the project's Traffic Analysis Zone (TAZ #614). Because the project (20 employees, 64 beds) is less intensive than what is currently included in the County's TDM (a total of 48 non-retail employees), new Cumulative (2035) analyses are not required to be completed as part of this study.

Based on the above information and direction from County's representative, this LOS analysis was conducted for the study facilities for the following scenarios:

- A. Existing (2015) Conditions
- B. Existing (2015) plus Proposed Project Conditions
- C. Near-Term (2025) Conditions
- D. Near-Term (2025) plus Proposed Project Conditions

The following is a discussion of the analyses for these scenarios:

<sup>4</sup> Email from Chirag Safi, Kittelson & Associates, Inc., April 15, 2015.

## EXISTING (2015) CONDITIONS

Recent peak-hour traffic volumes for the Green Valley Road intersection with Francisco Drive intersection were obtained from a recent study completed, by others, for the Green Valley Road Corridor<sup>5</sup>. Two (2) new weekday AM and PM peak period intersection turning movement traffic counts were conducted in March 2015, for the Francisco Drive intersections with Cambria Way/Embarcadero Drive and El Dorado Hills Boulevard. These counts were conducted between the hours of 6:30 a.m. and 9:30 a.m. and 3:30 p.m. and 6:30 p.m. It is worth noting that a two percent heavy vehicle factor was incorporated in this, and all subsequent analysis scenarios. At the time of this study, the El Dorado Hills Boulevard intersection with Francisco Drive was under construction to implement the County's Capital Improvement Project (CIP) #71358 (Francisco Drive Right-Turn Pocket). This project involves the addition of an eastbound right-turn lane from Francisco Drive and a complementary southbound receiving lane onto El Dorado Hills Boulevard. These improvements are reflected in all subsequent analysis scenarios.

Existing (2015) peak-hour turn movement volumes are presented in **Figure 6**, and the traffic count data sheets are provided in **Appendix A**. **Table 3** presents the peak-hour intersection operating conditions for this analysis scenario.

**Table 3 – Existing (2015) Intersection Levels of Service**

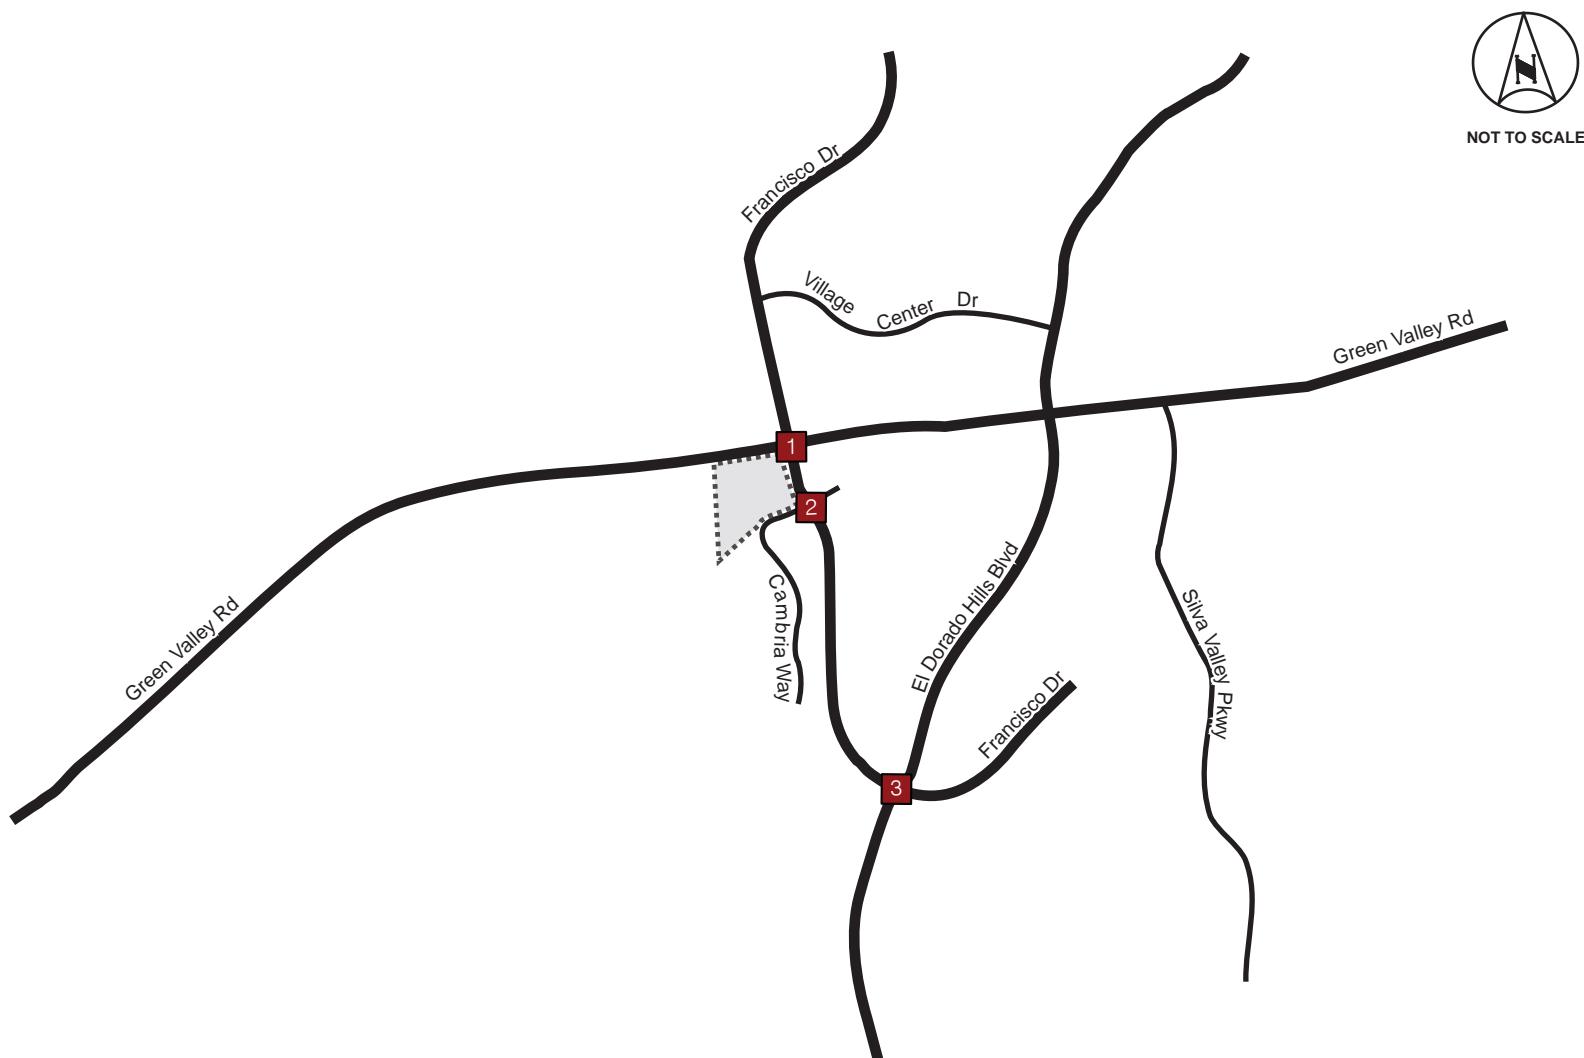

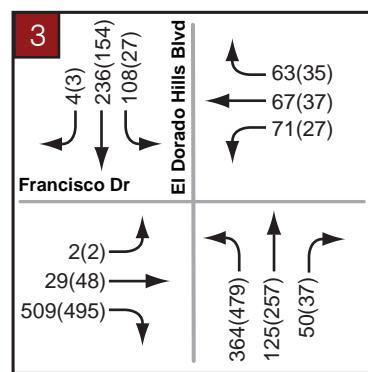

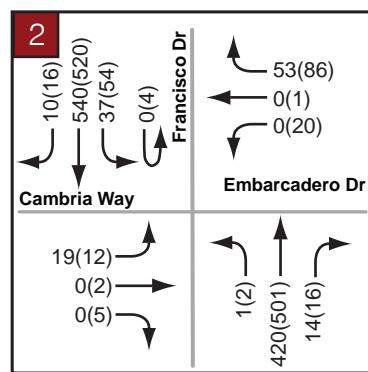

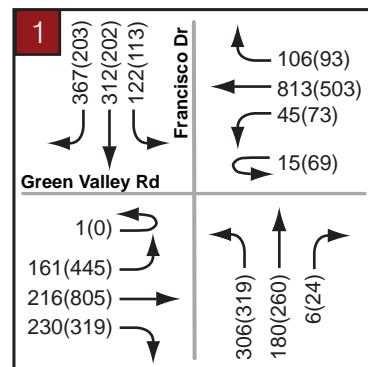

#	Intersection	Traffic Control	AM Peak-Hour		PM Peak-Hour	
			Delay (seconds)	LOS	Delay (seconds)	LOS
1	Green Valley Road @ Francisco Drive	Signal	43.7	D	29.9	C
2	Francisco Drive @ Cambria Way/Embarcadero Drive	SSSC*	36.2 (EB)	E	34.5 (EB)	D
3	El Dorado Hills Boulevard @ Francisco Drive	AWSC	<b>54.0</b>	F	48.7	E
4	Green Valley Road @ Project Site Access Driveway	SSSC*	<i>Plus Project Analysis Scenarios Only</i>			
5	Cambria Way @ Project Site Access Driveway	SSSC*				

\* Control delay for worst minor approach (worst minor movement) for SSSC. **Bold = Substandard per County**

As indicated in **Table 3**, the study intersections operate from LOS C to LOS F during the AM and PM peak-hours. Analysis worksheets for this scenario are provided in **Appendix B**.

## EXISTING (2015) PLUS PROPOSED PROJECT CONDITIONS

Peak-hour traffic associated with the proposed project was added to the existing traffic volumes and levels of service were determined at the study intersections. **Table 4** provides a summary of the intersection analysis and **Figure 7** provides the AM and PM peak-hour traffic volumes at the study intersections for this analysis scenario.

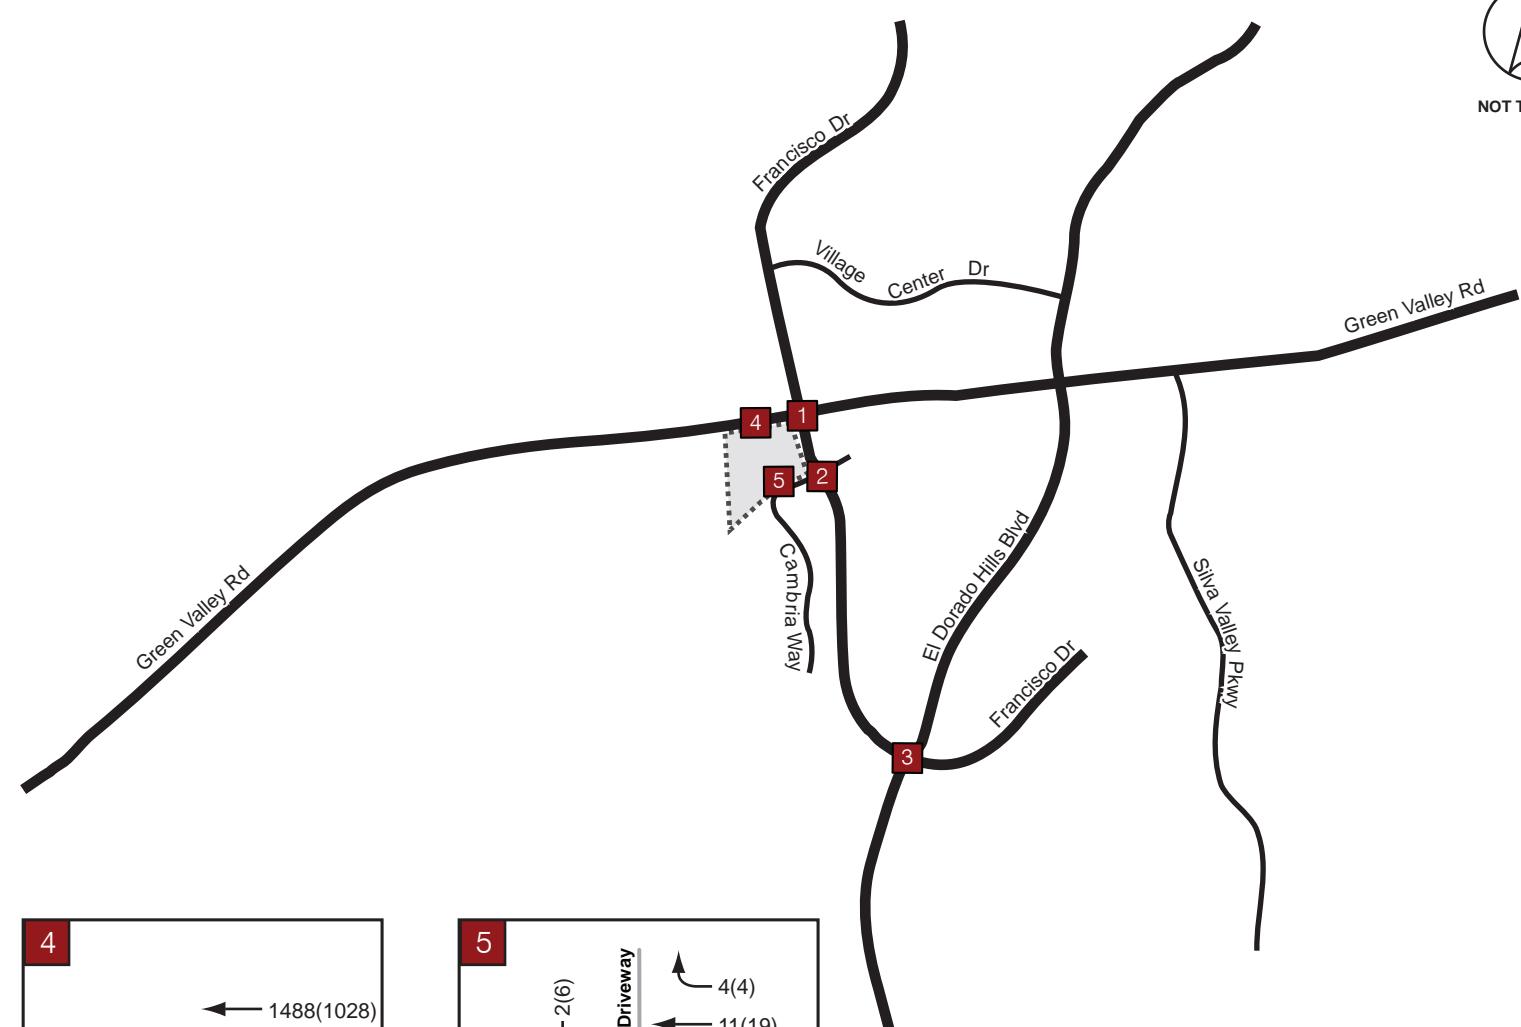

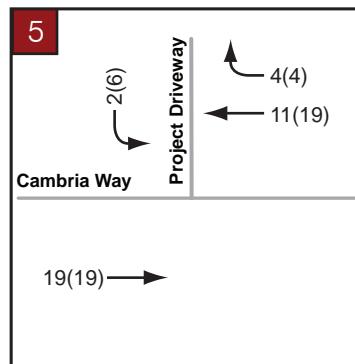

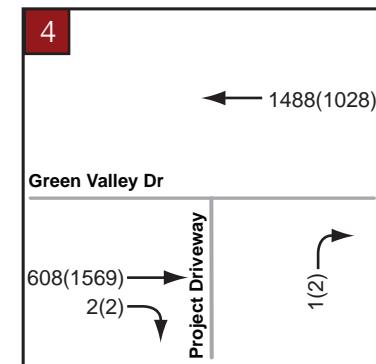

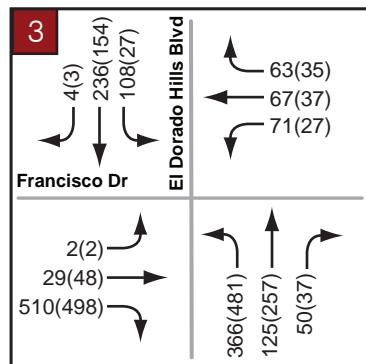

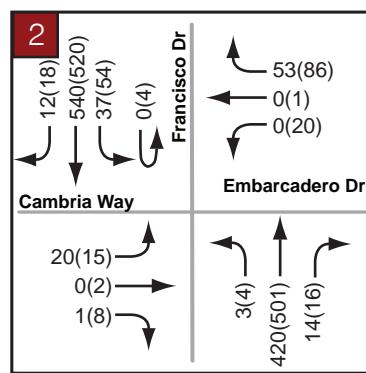

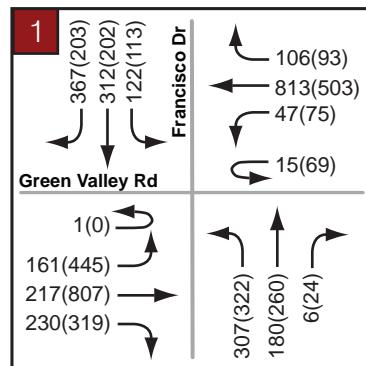

**Table 4** – Existing (2015) and Existing (2015) plus Proposed Project Intersection Levels of Service

#	Intersection	Analysis Scenario <sup>+</sup>	Traffic Control	AM Peak-Hour		PM Peak-Hour	
				Delay (seconds)	LOS	Delay (seconds)	LOS

## NEAR-TERM (2025) CONDITIONS

Consistent with the traffic forecasting methodology specified by a representative of the County<sup>1</sup>, traffic projections for this study are based on the County's current Travel Demand Model (TDM)<sup>6</sup> and recently approved 20-year growth projections. These Near-Term, year 2025 conditions are based on a straight-line interpolation between model Existing (2010) and Cumulative (2035) forecast. Details regarding the volume forecasting and intersection turning movement development are presented in **Appendix D**.

**Table 5** provides a summary of the intersection analysis and **Figure 8** provides the AM and PM traffic volumes for this analysis scenario.

**Table 5 – Near-Term (2025) Intersection Levels of Service**

#	Intersection	Traffic Control	AM Peak-Hour		PM Peak-Hour	
			Delay (seconds)	LOS	Delay (seconds)	LOS
1	Green Valley Road @ Francisco Drive	Signal	44.6	D	46.3	D
2	Francisco Drive @ Cambria Way/Embarcadero Drive	SSSC*	28.1 (EB)	D	43.6 (EB)	E
3	El Dorado Hills Boulevard @ Francisco Drive	AWSC	39.8	E	46.1	E
4	Green Valley Road @ Project Site Access Driveway	SSSC*	<i>Plus Project Analysis Scenarios Only</i>			
5	Cambria Way @ Project Site Access Driveway	SSSC*	<i>Plus Project Analysis Scenarios Only</i>			

\* Control delay for worst minor approach (worst minor movement) for SSSC.

As indicated in **Table 5**, the study intersections operate from LOS C to LOS E during the AM and PM peak-hours. The analysis worksheets for this scenario are provided in **Appendix E**.

## NEAR-TERM (2025) PLUS PROPOSED PROJECT CONDITIONS

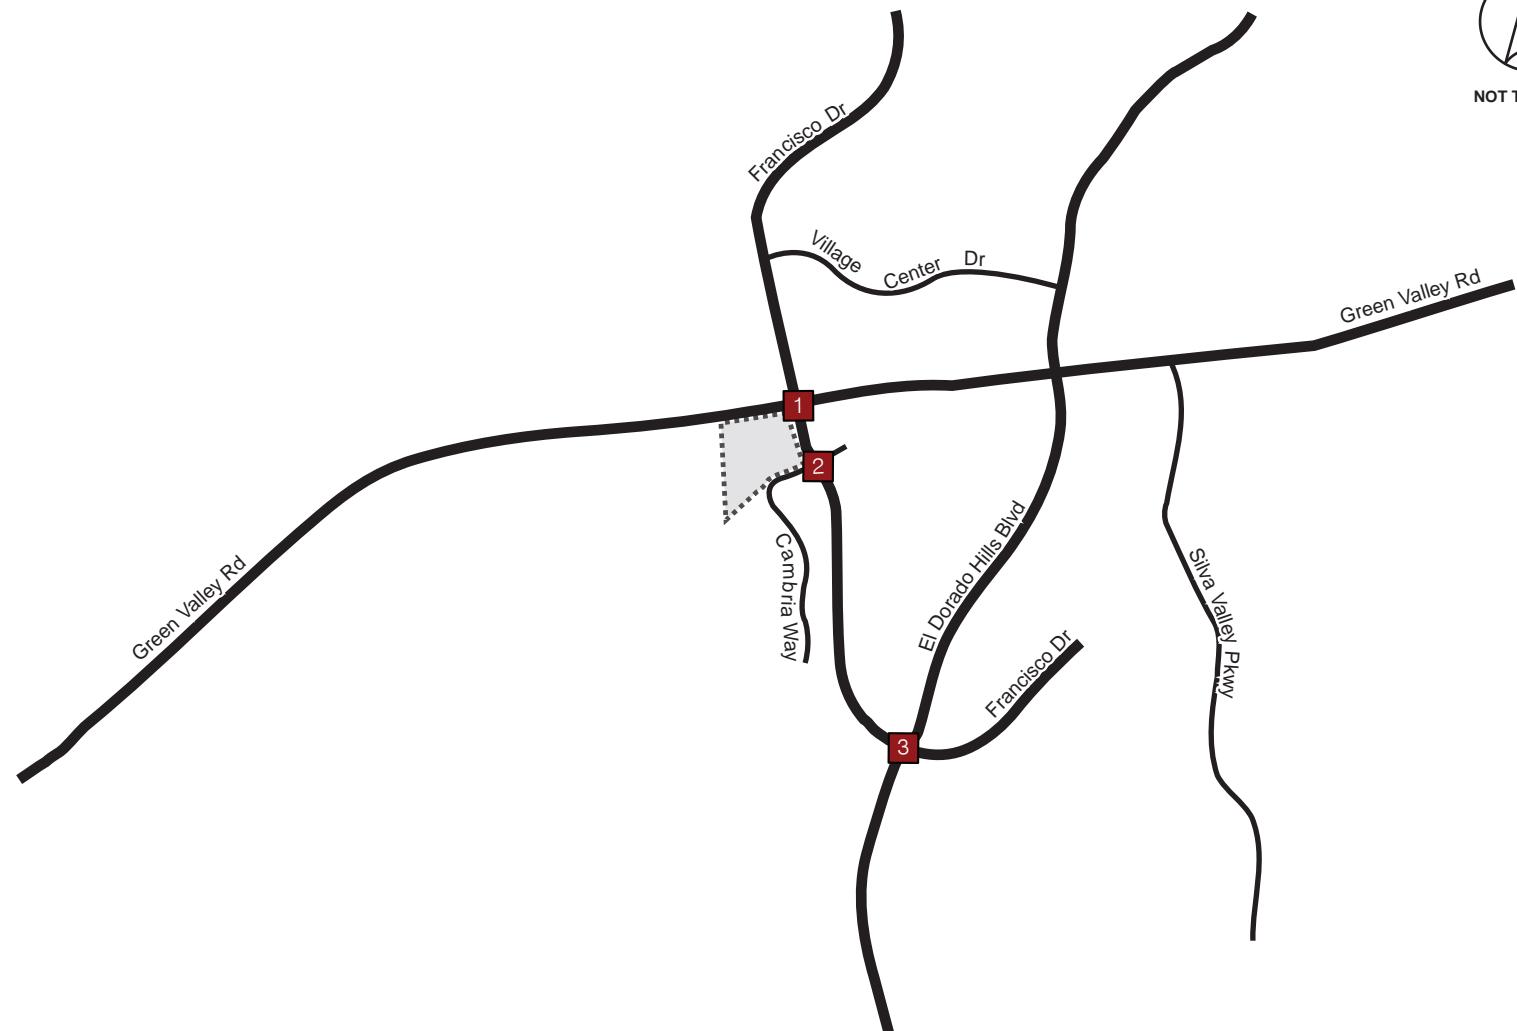

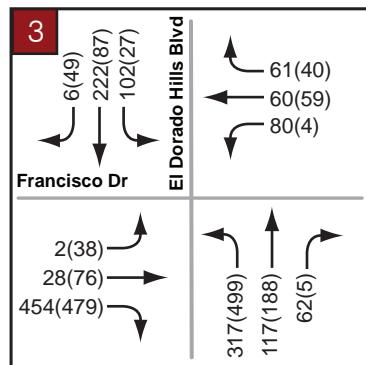

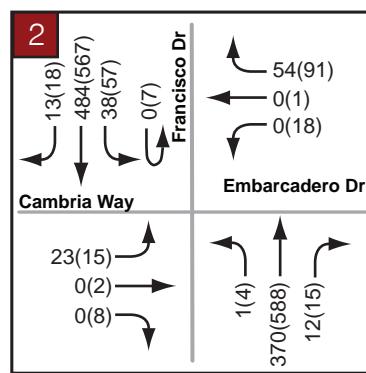

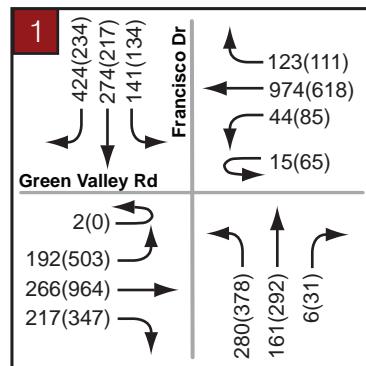

Peak-hour traffic associated with the proposed project was added to the Near-Term (2015) traffic volumes, and levels of service were determined at the study facilities. **Table 6** provides a summary of the intersection operating conditions for this analysis scenario. **Figure 9** provides the AM and PM traffic volumes for this analysis scenario.

As indicated in **Table 6**, the study intersections operate from LOS A to LOS E during the AM and PM peak-hours. The analysis worksheets for this scenario are provided in **Appendix F**.

<sup>6</sup> As directed by a representative of the County, the Dixon Ranch project was manually added to the County's 2035 TDM for use in the traffic forecasting efforts for this project.

## IMPACTS AND MITIGATION

### Standards of Significance

Project impacts were determined by comparing conditions with the proposed project to those without the project. Impacts for intersections are created when traffic from the proposed project forces the LOS to fall below a specific threshold.

The County's standards<sup>7</sup> specify the following:

"Level of Service (LOS) for County-maintained roads and State highways within the unincorporated areas of the County *shall not be worse than LOS E in the Community Regions.*" (El Dorado County General Plan Policy TC-Xd) The study intersections are located within the El Dorado Hills Community Region.

"If a project causes the peak-hour LOS or volume/capacity ratio on a county road or State highway that would otherwise meet the County standards (without the project) to exceed the [given] values, then the impact shall be considered significant."

"If any county road or state highway fails to meet the [given] standards for peak hour LOS or volume/capacity ratios without the proposed project, and the project will worsen conditions on the road or highway, then the impact shall be considered significant." According to General Plan Policy TC-Xe<sup>8</sup>, 'worsen' is defined as "a 2 percent increase in traffic during the a.m. peak hour, p.m. peak hour, or daily, or the addition of 100 or more daily trips, or the addition of 10 or more trips during the a.m. peak hour or the p.m. peak hour."

<sup>7</sup> *Transportation Impact Study Guidelines*, El Dorado County Community Development Agency, November 2014.

<sup>8</sup> *El Dorado County General Plan, Transportation and Circulation Element*, July 2004.

## Impacts and Mitigation

### Existing (2015) plus Proposed Project Conditions

As reflected in **Table 4**, the addition of the proposed project does not result in a significant impact as defined by the County.

Impacts:

*None.*

Mitigation:

*None Required.*

### Near-Term (2025) plus Proposed Project Conditions

As reflected in **Table 6**, the addition of the proposed project does not result in a significant impact as defined by the County.

Impacts:

*None.*

Mitigation:

*None Required.*

## OTHER CONSIDERATIONS

### Peak-Hour Traffic Signal Warrant Evaluation

A planning level assessment of the need for traffic signalization was performed for the un-signalized study intersections. This evaluation was performed consistently with the peak-hour warrant methodologies noted in Section 4C of the *California Manual on Uniform Traffic Control Devices (CMUTCD), 2014 Edition*. A summary of the peak-hour warrant results are presented in **Table 7**.

**Table 7 – Traffic Signal Warrant Analysis Results**

#	Intersection	Analysis Scenario			
		Existing (2015)	Existing (2015) plus PP	Near-Term (2025)	Near-Term (2025) plus PP
2	Francisco Dr @ Cambria Wy	No / No	No / No	No / No	No / No
3	El Dorado Hills Blvd @ Francisco Dr	Yes / Yes	Yes / Yes	Yes / Yes	Yes / Yes
4	Cambria Way @ Project Access Dwy		No / No		No / No
5	Green Valley Rd @ Site Access Dwy		No / No		No / No

Results are presented in **AM / PM format**.  
Note: Peak-hour warrant is satisfied if Condition A or B is met.

As shown in **Table 7**, intersection #3 (El Dorado Hills Blvd @ Francisco Dr) satisfies the peak-hour signal warrant with and without the addition of the proposed project. However, the proposed project does not cause the peak-hour signal warrant to be satisfied at any of the study intersections. Detailed results of this analysis are presented in **Appendix G**.

### **Sight Distance Evaluation**

A sight distance evaluation was completed for both site access driveways (Intersections #4 and #5). These evaluations were based on observed horizontal and vertical geometric conditions and were performed in accordance with the guidelines presented in the *Geometric Design of Highways and Streets, 2011*, published by the American Association of State Highway and Transportation Officials (AASHTO).

According to AASHTO, an assumed 30 mph design speed (25 mph posted speed limit) requires a minimum of 200 feet of Stopping Sight Distance (SSD). Adequate SSD was documented along the Cambria Way approaches to the site driveway. Furthermore, an assumed 60 mph design speed (55 mph posted speed limit) requires a minimum of 570 feet of SSD. Adequate sight distance was observed to the left (west) for the Green Valley Road intersection with the site access driveway.

To more thoroughly assess conditions for eastbound Cambria Way traffic at Francisco Drive, we also completed an evaluation of sight distance for this intersection approach. According to AASHTO, an assumed 45 mph design speed (40 mph posted speed limit) requires a minimum of 360-feet of SSD. Adequate AASHTO SSD was documented along the Francisco Drive approaches to Cambria Way. In all cases, roadside vegetation should be maintained to preserve sight distance.

### **Intersection Queuing Evaluation**

Vehicle queuing for the study intersections was evaluated. For the queuing analysis, the anticipated vehicle queues for critical movements at these intersections were evaluated. The calculated vehicle queues were compared to actual or anticipated vehicle storage/segment lengths. Results of the queuing evaluation are presented in **Table 8**. Analysis sheets that include the anticipated vehicle queues are presented in Appendices B, C, E, and F. As presented in **Table 8**, the addition of the proposed project adds additional queuing to several of the study locations.

### **Site Plan, Access, and On-site Circulation Evaluation**

The site plan for the proposed project (**Figure 2**) was qualitatively reviewed for general access and on-site circulation. According to the site plan, access to the site will be provided via two (2) driveways, one along Cambria Way and one along Green Valley Road. Level of service and delay data was previously reported for these intersections. The combination of these two access points, as well as the on-site circulation system provides adequate access to/from both Green Valley Road and Francisco Drive (via Cambria Way).

The proposed project's Green Valley Road Driveway is proposed to accommodate both right-in and right-out movements. Adequate deceleration distance should be provided and the acceleration distance should be considered as part of the existing eastbound right-turn pocket. The proposed geometrics and access are virtually identical to the existing Safeway center driveway located along the westbound approach to the Green Valley Road intersection with Francisco Drive. Furthermore, as documented in Appendices B, C, E, and F, the northbound right movement from the proposed project is not anticipated to be blocked by the eastbound approach queues at the Green Valley Road intersection with Francisco Drive.

In addition, *Fire Safe Regulations*<sup>9</sup> state that on-site roadways shall "provide for safe access for emergency wildland fire equipment and civilian evacuation concurrently, and shall provide unobstructed traffic circulation during a wildfire emergency..." All project roadways shall be designed and constructed in accordance with these requirements.

<sup>9</sup> *Fire Safe Regulations*, Title 14 Natural Resources, Division 1.5 Department of Forestry, Chapter 7 – Fire Protection, Subchapter 2 SRA Safe Regulations, Article 2 Emergency Access, El Dorado County Building Department.

### Preliminary Traffic Safety Evaluation

According to the County's 2011 *Accident Location Study*<sup>10</sup>, several study area sites (i.e., intersections and roadway segments) experienced three (3) or more accidents during a three-year period between January 1, 2009, and December 31, 2011. According to the Study, these sites were selected for investigation and determination of corrective action(s). **Table 9** provides a summary of the study area sites and their selected actions.

According to the *Study*, eight (8) sites "do not require further review at this time. However, these sites will continue to be monitored and any subsequent increase in the frequency of accidents may necessitate further review and analysis." One (1) site has a pending improvement and it is anticipated that, "upon completion, [this] improvement will substantially reduce the number of accidents."

<sup>10</sup> Annual Accident Location Study 2011, County of El Dorado Department of Transportation, March 18, 2012.

**Table 9 – Project Area Sites Selected for Investigation**

Site #	Location Description	Accident Rate <sup>+</sup>	Identified Action
13	El Dorado Hills Blvd, US 50 On/Off Ramps	1.07	Pending Improvements

<sup>+</sup> # Accidents per Million Vehicles (MV) for single sites (intersections/curves), # Accidents per Million Vehicle Miles (MVM) for roadway sections.

### Bicycle and Pedestrian Facilities Evaluation

According to Chapter 5 of the *El Dorado County Bicycle Transportation Plan*, Class II Bike Lanes are proposed for Green Valley Road, Francisco Drive, and El Dorado Hills Boulevard in the vicinity of the project site. In addition, Class III Bike Routes are proposed for Francisco Drive and Salmon Falls Road/Lakehills Drive north of Green Valley Road. A Class I Bike Path is also proposed for El Dorado Hills Boulevard, south of Francisco Drive.

While the project will not result in removal of a bikeway/bike lane or prohibition of implementation of the facilities identified in the *Plan*, it is required to include pedestrian/bicycle paths connecting to adjacent commercial, research and development, or industrial projects and any schools, parks, or other public facilities. The proposed project will be required to construct on-site roadway and pedestrian facilities in accordance with County design guidelines. These on-site pedestrian and bicycle facilities will connect the project with the proposed adjacent Class II Bike Lanes along Green Valley Road and Francisco Drive. Through these connections to the proposed bike lane network, the project will provide continuity with adjacent projects, schools, parks, and other public facilities.

## CONCLUSIONS

Based upon the analysis documented in this report, the following conclusions are offered:

- The proposed project is estimated to generate 172 total new daily trips, with 9 new trips occurring during the AM peak-hour, and 14 new trips occurring during the PM peak-hour.
- The County's current Travel Demand Model (TDM) incorporates non-residential growth for the subject parcel within the project's Traffic Analysis Zone (TAZ #614). Because the project (20 employees, 64 beds) is less intensive than what is currently included in the County's TDM (a total of 48 non-retail employees), new Cumulative (2035) analyses are not required to be completed as part of this study.
- As defined by the County, the addition of the proposed project to the Existing (2015) and Near-Term (2025) scenarios does not worsen conditions at the study intersections. As a result, the project's potential environmental impacts to transportation facilities are considered to be ***less than significant***.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.  
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.  
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.  
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.  
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.

Approach:	L - T - R	L - T - R	L - T - R	L - T - R
Movement:	0 0 1! 0 0	1 0 1 0 1	1 0 0 0 0	0 0 0 0 1
Lanes:	1 420	14 37 540	10 19 0	0 0 0 53
Initial Vol:	xxxxxx	xxxxxx	27.5	11.2

Control: Uncontrolled Uncontrolled Stop Sign Stop Sign  
Signal Warrant Rule #1: [vehicle-hours=0.1]  
FAIL - Vehicle-hours less than 4 for one lane approach.  
Signal Warrant Rule #2: [approach volume=19]  
FAIL - Approach volume less than 100 for one lane approach.  
Signal Warrant Rule #3: [approach count=4][total volume=1094]  
SUCCEED - Total volume greater than or equal to 800 for intersection  
with four or more approaches.

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.2]  
FAIL - Vehicle-hours less than 4 for one lane approach.  
Signal Warrant Rule #2: [approach volume=53]  
FAIL - Approach volume less than 100 for one lane approach.  
Signal Warrant Rule #3: [approach count=4][total volume=1094]  
SUCCEED - Total volume greater than or equal to 800 for intersection  
with four or more approaches.

## SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

## Peak Hour Volume Signal Warrant Report [Urban]

Intersection #2 Intersection 2

Base Volume Alternative: Peak Hour Warrant NOT Met

## SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

## SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach:	L - T - R	L - T - R	L - T - R	L - T - R
Movement:	0 0 0 0 1	0 0 0 0 0	0 0 2 0 1	0 0 2 0 0
Control:	Stop Sign	Stop Sign	Uncontrolled	Uncontrolled
Lanes:	0 0 0 0 1	0 0 0 0 0	0 677	2 0 1681 0
Initial Vol:	0 0 1	0 0 0	xxxxxx	xxxxxx
ApproachDel:	10.7	xxxxxx	xxxxxx	xxxxxx

Approach[northbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=1]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=2361]

SUCCEED - Total volume greater than or equal to 650 for intersection  
with less than four approaches.

## SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

## Peak Hour Volume Signal Warrant Report [Urban]

Intersection #4 Green Valley Road @ Project Access Driveway

Base Volume Alternative: Peak Hour Warrant NOT Met

	North Bound	South Bound	East Bound	West Bound
Approach:	L - T - R	L - T - R	L - T - R	L - T - R
Movement:	0 0 0 0 1	0 0 0 0 0	0 0 2 0 1	0 0 2 0 0
