E.1 INTRODUCTION

This appendix shows the summary of the project evaluation outcomes discussed in Appendix D. Table E.1 shows an example of a Project Evaluation Summary table.

Table E.1 Example of Project Evaluation Summary Table

Project Information			Result	Overall Benefit Category Score							Water Quality	Water Supply	Flood Management	Environmental	Community	Project Cost	Implementation Complexity	Weighted Score	Water Quality	Water Supply	Flood Management	Environmental	Community	Project Cost	Implementation Complexity													
Project ID	Name	Project Type	Grouping	Water Quality	Water Supply	Flood Management	Environmental	Community	Project Cost	Implementation Complexity	Weighted Score	Increased filtration and/or treatment of runoff	Nonpoint source pollution control	Reestablished natural water drainage and treatment	Water supply reliability	Water conservation	Conjunctive use	Decreased flood risk by reducing runoff rate and/or volume	Reduced sanitary sewer overflows	Environmental and habitat protection and improvement	Increased urban green space	Reestablishment of the natural hydrograph	Improved Air quality*	Ecological Improvement*	Energy footprint	Water temperature improvements	Public Education	Community Involvement	Environmental Justice*	Recreational Benefit	Employment opportunities provided	Project Funding Mechanism	Eligibility for External Funding	Constructability	Institutional Complexity	Regulatory & Permitting Compliance	Public Acceptance	Right of Way

WEST SLOPE STORMWATER RESOURCE PLAN

Appendix E Project Evaluation Summary Table
March 2018

As discussed in Appendix D, each identified project is grouped by component and given a project ID. Project types were also assigned. More discussion on the project types and the overall evaluation approach can be found in Section 4 of the West Slope Stormwater Resource Plan (SWRP). Table E.1 shows an example score assigned to each criterion. The criteria scores range from 0 to 3, where 0 is generally not applicable and 3 is highest benefit. Table E.2 shows the sum of criteria scores are for this example project.

Table E.2 Example of Project Evaluation Summary Table - Sum of Criteria per Benefit Category

	Benefit Category						
	Water Quality	Water Supply	Flood Management	Environmental	Community	Project Cost	Implementation Complexity
Sum of Criteria per Benefit Category	0	3	3	18	15	5	11

In order to compare the benefit category scores for a project, the summed scores were normalized to a 0 to 3 range, where 0 is the lowest score and 3 is the highest score. Normalization allows for comparison between benefit category scores that are measured using different number of criteria. If a project had no benefits in a given benefit category, it received a 0. If only one criteria was applicable in a benefit category and scored a 1, then the normalized score would be 1. If all criteria in a benefit category were applicable and all scored 3, then the normalized score was 3. Table E.3 shows the possible sum of criteria scores per benefit category and the normalized overall benefit category score for each benefit category.

For example, in Table E.2 the sum of criteria scores for Water Supply and Flood Management is 3. Referencing Table E.3, the overall benefit category score is normalized to 1.5 for Water Supply and 1.8 for Flood Management. Even though the benefit category score for Water Supply and Flood Management is 3, Water Supply and Flood Management benefit categories have different number of criteria so the possible sum of criteria scores and the normalization of overall benefit category score will be different.

Appendix E Project Evaluation Summary Table
March 2018

Table E.3 Overall Benefit Category Scores

Sum of Criteria Score per Benefit Category	Overall Benefit Category Score						
	Water Quality	Water Supply	Flood Management	Environmental	Community	Project Cost	Implementation Complexity
0	0.00	0.00	0.00	0.00	0.00	0.00	0.00
1	1.00	1.00	1.00	1.00	1.00	1.00	1.00
2	1.25	1.25	1.40	1.10	1.14	1.40	1.14
3	1.50	1.50	1.80	1.20	1.29	1.80	1.29
4	1.75	1.75	2.20	1.30	1.43	2.20	1.43
5	2.00	2.00	2.60	1.40	1.57	2.60	1.57
6	2.25	2.25	3.00	1.50	1.71	3.00	1.71
7	2.50	2.50		1.60	1.86		1.86
8	2.75	2.75		1.70	2.00		2.00
9	3.00	3.00		1.80	2.14		2.14
10				1.90	2.29		2.29
11				2.00	2.43		2.43
12				2.10	2.57		2.57
13				2.20	2.71		2.71
14				2.30	2.86		2.86
15				2.40	3.00		3.00
16				2.50			
17				2.60			
18				2.70			
19				2.80			
20				2.90			
21				3.00			

*Gray cells represent not applicable sum of criteria scores per benefit category

WEST SLOPE STORMWATER RESOURCE PLAN

Appendix E Project Evaluation Summary Table
March 2018

Table E.4 shows the sum of criteria scores are calculated in Table E.2 for each benefit category normalized to an overall benefit category score for each benefit category based on Table E.3. After the overall benefit category score is calculated for the project, the weighted score for the project can be calculated using benefit category weights.

Table E.4 Example of Project Evaluation Summary Table – Overall Benefit Category Score

	Benefit Category						
	Water Quality	Water Supply	Flood Management	Environmental	Community	Project Cost	Implementation Complexity
Overall Benefit Category Score	0.00	1.50	1.80	2.70	3.00	2.60	2.43

Benefit category weights, shown in Table E.5, were developed using a paired comparison analysis to determine the relative importance of each benefit category used in the West Slope SWRP. Development of benefit category weights is discussed in further detail in Section 4 and Appendix C of the West Slope SWRP. To calculate the project weighted score, the overall benefit category score is multiplied by the respective benefit category weight. Table E.6 shows the calculation of the example project weighted score in Table E.1. After the project weighted score are calculated, projects are organized within each component relative to their weighted score.

Table E.5 Benefit Category Weights

	Benefit Category						
	Water Quality	Water Supply	Flood Management	Environmental	Community	Project Cost	Implementation Complexity
Benefit Category Weight*	15%	23%	11%	14%	10%	18%	9%
*Reference: Development of benefit category weights is discussed in further detail in Section 4 and Appendix C of the West Slope SWRP.							

WEST SLOPE STORMWATER RESOURCE PLAN

Appendix E Project Evaluation Summary Table
March 2018

Table E.6 Example of Project Evaluation Summary Table – Weighted Score

	Benefit Category							Project Weighted Score
	Water Quality	Water Supply	Flood Management	Environmental	Community	Project Cost	Implementation Complexity	
Overall Benefit Category Score	0.00	1.50	1.80	2.70	3.00	2.60	2.43	n/a
Benefit Category Weight	15%	23%	11%	14%	10%	18%	9%	n/a
Weighted Score per Benefit Category	0.00	0.35	0.20	0.38	0.30	0.47	0.22	1.91

Projects are grouped into “A”, “B” or “C” group based on their weighted score within a given component. Projects in the “A” group received one of the top third weighted scores, projects in the “B” group received one of the middle third weighted scores, and projects in the “C” group received one of the bottom third weighted scores within a given component. “A” group projects typically have the highest potential to provide the greatest multi-benefits, “B” projects have moderate potential, and “C” projects have less potential. For a more accurate comparison between projects, the Stormwater Management component projects were evaluated based on whether they were Structural and Non-Structural projects. Further discussion on the types of projects identified as Structural and Non-Structural under the Stormwater Management Component may be found in Section 4.1 of the West Slope SWRP.

The following sections summarizes the project evaluations per project type under each of the components: Surface Water Storage, Watershed Management and Stormwater Management (Structural and Non-Structural).
