Hi There...

I'm writing this email on behalf of my mother in law who resides in Cool CA. regarding her access to internet services. Currently she only able to get a DSL line to her house that is providing her with less then 3 mbps download speeds and negligible upload speeds. Due to her poor internet connection she is unable to do simple things such as check email or view any type of YouTube videos without some kind of lag or service interruption. The DSL line is not reliable at all she has gone months at a time without any internet service what so ever. It would be great if you could allow for AT&T to install fixed wireless internet that is specifically designed for areas such as Cool.

I hope you will take this email into consideration while you are making a decision regarding the AT&T tower that is being proposed for the Cool area.

Regards,
Michael O'Keefe
