Search Ring's Description and Objectives:

AT&T Mobility is proposing to build and maintain an unmanned wireless telecommunication facility consisting of a 30' x 35', 1,050 square foot enclosed compound (lease area). The compound will include a 140 foot Stealth Broadleaf tower, one equipment shelter, one 35kw standby propane generator, and one 500 gallon propane tank. This facility will be located at 7160 Dragon Point Rd, Shingle Springs, within El Dorado County's jurisdiction in a 20 acre RL-20 zone. The site is approximately 0.50 miles north of the Consumnes River and the area consists of evergreen trees, oak trees and rolling hills with rocky terrain.

AT&T's objective for the Pilot Hill site is to provide wireless hi-speed broadband internet to a minimum of 116 LU's and cellular services to the nearby residences. This site is to provide hi-speed internet and enhanced cellular coverage & capacity to the Latrobe community that surrounds the search ring which is a relatively dense underserved area. The site location's elevation is approximately 742.5 feet while the community of Latrobe's elevation averages around 500 feet, giving the homes within the community great potential for line of site to the tower. After running a coverage simulation at the site location, AT&T is anticipating meeting their FCC objective for this search ring by covering approximately 116 homes.

Potential Co-locations:

There are no potential Co-location opportunities in the near vicinity of the provided Search Ring. The targeted area is a relatively low populated area, therefore, typical cellular services are less prone to be present.

Alternative Site Analysis pursuant to 17.14.210 (B) (1):

Above is a map showing the Search Ring (center is the red pin), Proposed Site (green pin) and the two alternative sites (yellow pins) that were considered for placement of the telecommunications facility. Each Alternative Site is discussed below:

Latrobe Alternative Candidate B:

7100 Chaparral Drive, Shingle Springs, CA 95682

Latitude/Longitude: 38.535022, -120.968088

Proposal – New Monopine

Considerations:

Candidate B is located approximately 0.75 miles northwest of the center of AT&T's search ring. The proposed tower would be located on a 21.35 acre, RL-20 zoned property owned by Christopher and Diana Capra. The property is located on the north side of Chaparral Drive and the site was proposed on the southwest end of the property. Candidate B was chosen as AT&T's second preferred candidate as the RF Engineer's simulation yielded fewer LU's than the subject site located at 7160 Dragon Point Road.

Latrobe Alternative Candidate C:

7340 Chaparral Drive, Shingle Springs, CA 95682

Latitude/Longitude: 38.539163, -120.973116

Proposal – New Monopine

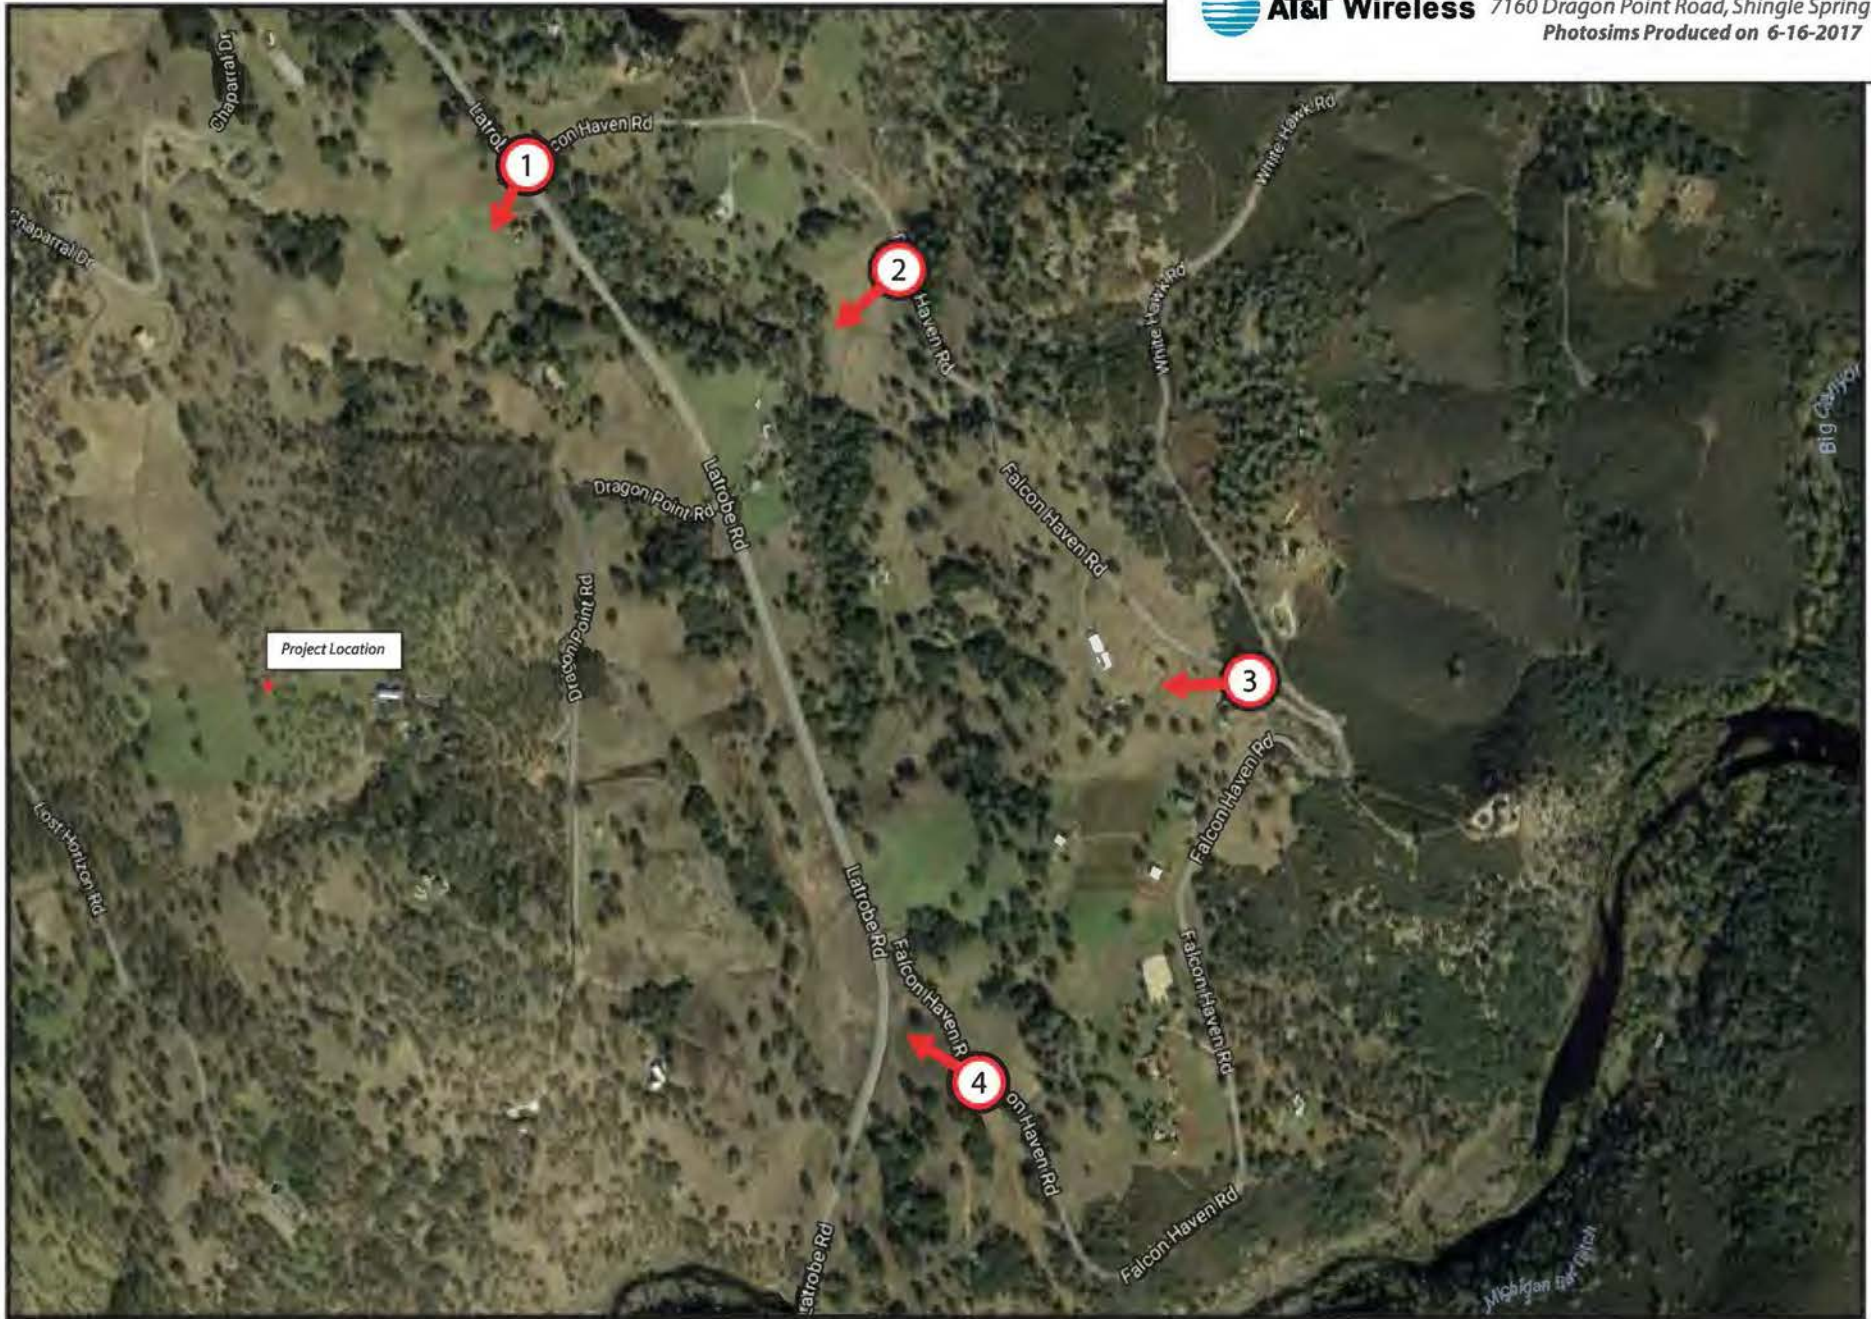

Candidate C is located approximately 1 mile northwest of the center of AT&T's search ring. The proposed tower would be located on a 21.12 acre, RL-20 zoned property owned by William and Varacalli Rose. The property is located on the north side of Chaparral Drive and the site was proposed on the northwest end of the property. Candidate C was chosen as AT&T's third preferred candidate as the RF Engineer's simulation yielded fewer LU's than the subject site located at 7160 Dragon Point Road.

Actual View of the Proposed Location:

The proposed lease area is on the north side of the property. The site will not interfere with the existing use of the property. Access will be directly off of Dragon Point Road.

Sound Specifications:

- Emergency Generator Model: SG035 Generac
 - Average decibel (dBa) level at 23 feet = 64.9 dBa
- HVAC Model: ASDCA48
 - Average decibel (dBa) level at 50 feet = 57 dBa

Sound Specifications while taking the Sound Blanket into consideration:

- Emergency Generator Model: SG035 Generac
 - Average decibel (dBa) level at 23 feet = 58.11 dBa
- HVAC Model: ASDCA48
 - Average decibel (dBa) level at 50 feet = 46.36 dBa

Findings:

1. Distance to the Property Line of APN 087-181-48 = 30'
 - a. Generator Decibel level at 30' = 55.8 dBa
 - b. HVAC Decibel level at 30' = 50 dBa
2. Distance to closest residence: APN 104-320-30 = 790'
 - a. Generator Decibel level at 790' = 34.18 dBa
 - b. HVAC Decibel level at 790' = 22.39 dBa

Conclusion:

After calculating all decibel levels at the nearby residence’s property line and actual residence, the onsite Emergency Backup Generator and HVAC systems are within El Dorado County’s noise level standards according to El Dorado County Title 130 Zoning and Noise Ordinance, Chapter 130.37 – Noise Standards.

Radio Frequency Emissions Compliance Report For AT&T Mobility

Site Name: Latrobe	Site Structure Type: Broadleaf Pole
Address: 7160 Dragon Point Road Shingle Springs, California	Latitude: 38.529186
Report Date: June 19, 2017	Longitude: -120.963094
	Project: New Build

General Summary

AT&T Mobility has contracted Waterford Consultants, LLC to conduct a Radio Frequency Electromagnetic Compliance assessment of the proposed Latrobe site located at 7160 Dragon Point Road, Shingle Springs, California. This report contains information about the radio telecommunications equipment to be installed at this site and the surrounding environment with regard to RF Hazard compliance. This assessment is based on installation designs and operational parameters provided by AT&T Mobility.

The compliance framework is derived from the Federal Communications Commission (FCC) Rules and Regulations for preventing human exposure in excess of the applicable Maximum Permissible Exposure ("MPE") limits. At any location at this site, the power density resulting from each transmitter may be expressed as a percentage of the frequency-specific limits and added to determine if 100% of the exposure limit has been exceeded. The FCC Rules define two tiers of permissible exposure differentiated by the situation in which the exposure takes place and/or the status of the individuals who are subject to exposure. General Population / Uncontrolled exposure limits apply to those situations in which persons may not be aware of the presence of electromagnetic energy, where exposure is not employment-related, or where persons cannot exercise control over their exposure. Occupational / Controlled exposure limits apply to situations in which persons are exposed as a consequence of their employment, have been made fully aware of the potential for exposure, and can exercise control over their exposure. Based on the criteria for these classifications, the FCC General Population limit is considered to be a level that is safe for continuous exposure time. The FCC General Population limit is 5 times more restrictive than the Occupational limits.

Frequency (MHz)	Limits for General Population/ Uncontrolled Exposure		Limits for Occupational/ Controlled Exposure	
	Power Density (mW/cm ²)	Averaging Time (minutes)	Power Density (mW/cm ²)	Averaging Time (minutes)
30-300	0.2	30	1	6
300-1500	f/1500	30	f/300	6
1500-100,000	1.0	30	5.0	6

f=Frequency (MHz)

In situations where the predicted MPE exceeds the General Population threshold in an accessible area as a result of emissions from multiple transmitters, FCC licensees that contribute greater than 5% of the aggregate MPE share responsibility for mitigation.

Attachment 6 Site 5 Latrobe

Based on the computational guidelines set forth in FCC OET Bulletin 65, Waterford Consultants, LLC has developed software to predict the overall Maximum Permissible Exposure possible at any particular location given the spatial orientation and operating parameters of multiple RF sources. These theoretical results represent worst-case predictions as emitters are assumed to be operating at 100% duty cycle.

For any area in excess of 100% General Population MPE, access controls with appropriate RF alerting signage must be put in place and maintained to restrict access to authorized personnel. Signage must be posted to be visible upon approach from any direction to provide notification of potential conditions within these areas. Subject to other site security requirements, occupational personnel should be trained in RF safety and equipped with personal protective equipment (e.g. RF personal monitor) designed for safe work in the vicinity of RF emitters. Controls such as physical barriers to entry imposed by locked doors, hatches and ladders or other access control mechanisms may be supplemented by alarms that alert the individual and notify site management of a breach in access control. Waterford Consultants, LLC recommends that any work activity in these designated areas or in front of any transmitting antennas be coordinated with all wireless tenants.

Analysis

AT&T Mobility proposes the following installation at this location:

- Install twelve (12) new antennas
- Install nine (9) new RRUS-11
- Install nine (9) new RRUS-32

The antennas will be mounted on a new 143-foot broadleaf pole with centerlines at 120 and 130 feet above ground level. The antennas will be oriented toward 60, 300 and 180 degrees. The Effective Radiated Power (ERP) in any direction from all AT&T Mobility operations will not exceed 17,359 Watts. Other appurtenances such as GPS antennas, RRUs and hybrid cable are not sources of RF emissions. From this site, AT&T Mobility will enhance voice and data services to surrounding areas in licensed 700, 850, 1900, 2100 and 2300 MHz bands. No other antennas are known to be operating in the vicinity of this site.

Power density decreases significantly with distance from any antenna. The panel-type antennas to be employed at this site are highly directional by design and the orientation in azimuth and mounting elevation, as documented, serve to reduce the potential to exceed MPE limits at any location other than directly in front of the antennas. For accessible areas at ground level, the maximum predicted power density level resulting from all AT&T Mobility operations is 0.4150% of the FCC General Population limits. Incident at adjacent buildings depicted in Figure 1, the maximum predicted power density level resulting from all AT&T Mobility operations is 0.1515% of the FCC General Population limits. The proposed operation will not expose members of the General Public to hazardous levels of RF energy and will not contribute to existing cumulative MPE levels on walkable surfaces at ground or at adjacent buildings by 5% of the General Population limits.

Waterford Consultants, LLC recommends posting contact information signage at the compound gate. RF alerting signage (Caution) should be posted at the base of the proposed tower to inform authorized climbers of potential conditions near the antennas. These recommendations are depicted in Figure 2.

Compliance Statement

Based on information provided by AT&T Mobility and predictive modeling, the installation proposed by AT&T Mobility at 7160 Dragon Point Road, Shingle Springs, California will be compliant with Radiofrequency Radiation Exposure Limits of 47 C.F.R. § 1.1307(b)(3) and 1.1310. RF alerting signage and restricting access to the tower to authorized climbers that have completed RF safety training is required for Occupational environment compliance.

Certification

I, Steven N. Baier-Anderson, am the reviewer and approver of this report and am fully aware of and familiar with the Rules and Regulations of both the Federal Communications Commissions (FCC) and the Occupational Safety and Health Administration (OSHA) with regard to Human Exposure to Radio Frequency Radiation, specifically in accordance with FCC's OET Bulletin 65. I have reviewed this Radio Frequency Exposure Assessment report and believe it to be both true and accurate to the best of my knowledge.
