

Presenter  
I'll update this before Tuesday's meeting, but as of Sunday night...

Assigned tier: Purple  
Assessed tier: Purple  
7-day average daily case rate:  
8.2/100,000 (threshold for Purple is 7.0; threshold for Red was 4.0 – we skipped right over that)  
7-day average testing positivity:  
3.3% (still in Orange, for now)  
It looks like the state may be skipping the healthy places index

value this week? I'll add it back if it has any relevance this week. It was, on the password protected CDPH website, higher than our county overall value for the first time in recent weeks, but was not shown in the embargoed data I received today. Last week's adjudication request was not approved (obviously!)

I need to listen to what the state says tomorrow – I don't know whether there still is officially a grace period for business/industry sectors to adapt to the shift in tiers.

The word Tentative here will be removed. Last week I used it because I was sharing info. a couple hours prior to the official announcement. This time, I think the announcement will come Monday before the BOS. However,

# THANK YOU
